

MITIGATED NEGATIVE DECLARATION

Project No. 482858 SCH No. Not Applicable

SUBJECT:

Moana Drive: The project is requesting a COASTAL DEVELOPMENT PERMIT for the construction of an approximately 2,389-square-foot two-story single dwelling unit and a 459-square-foot two-story detached garage and accessory dwelling unit on an existing vacant lot. Various site improvements would also be constructed including associated hardscape and landscape. The 6,250-square-foot project site is located at 1121 Moana Drive. The project site is designated Residential and zoned RS-1-7 within the Peninsula Community Plan Area. Additionally, the project site is within the Airports Approach Overlay Zone, Airport Influence Area (Review Area 2), FAA Part 77 Noticing Area, Coastal Height Limitation Overlay Zone, Coastal Overlay Zone (Non-Appealable 2), and Parking Impact Overlay Zone (Coastal). (LEGAL DESCRIPTION: Lot 15 in Block 2 of Rosecrans Park in the City of San Diego, County of San Diego, State of California according to Map No. 1378.) Applicant: Bennett Dahlin

- PROJECT DESCRIPTION: See attached Initial Study.
- II. ENVIRONMENTAL SETTING: See attached Initial Study.
- III. DETERMINATION: The City of San Diego conducted an Initial Study which determined that the proposed project could have a significant environmental effect in the following areas(s): **Historical Resources (Archaeology)**. Subsequent revisions in the project proposal create the specific mitigation identified in Section V of this Mitigated Negative Declaration. The project as revised now avoids or mitigates the potentially significant environmental effects previously identified, and the preparation of an Environmental Impact Report will not be required.
- IV. DOCUMENTATION: The attached Initial Study documents the reasons to support the above Determination.
- V. MITIGATION, MONITORING AND REPORTING PROGRAM:

A. GENERAL REQUIREMENTS – PART I Plan Check Phase (prior to permit issuance)

- 1. Prior to the issuance of a Notice To Proceed (NTP) for a subdivision, or any construction permits, such as Demolition, Grading or Building, or beginning any construction related activity on-site, the Development Services Department (DSD) Director's Environmental Designee (ED) shall review and approve all Construction Documents (CD), (plans, specification, details, etc.) to ensure the MMRP requirements are incorporated into the design.
- 2. In addition, the ED shall verify that the MMRP Conditions/Notes that apply ONLY to the construction phases of this project are included VERBATIM, under the heading, "ENVIRONMENTAL/MITIGATION REQUIREMENTS."
- 3. These notes must be shown within the first three (3) sheets of the construction documents in the format specified for engineering construction document templates as shown on the City website:

http://www.sandiego.gov/development-services/industry/standtemp.shtml

- 4. The **TITLE INDEX SHEET** must also show on which pages the "Environmental/Mitigation Requirements" notes are provided.
- 5. **SURETY AND COST RECOVERY** The Development Services Director or City Manager may require appropriate surety instruments or bonds from private Permit Holders to ensure the long term performance or implementation of required mitigation measures or programs. The City is authorized to recover its cost to offset the salary, overhead, and expenses for City personnel and programs to monitor qualifying projects.
- B. GENERAL REQUIREMENTS PART II

 Post Plan Check (After permit issuance/Prior to start of construction)
- 1. PRE CONSTRUCTION MEETING IS REQUIRED TEN (10) WORKING DAYS PRIOR TO BEGINNING ANY WORK ON THIS PROJECT. The PERMIT HOLDER/OWNER is responsible to arrange and perform this meeting by contacting the CITY RESIDENT ENGINEER (RE) of the Field Engineering Division and City staff from MITIGATION MONITORING COORDINATION (MMC). Attendees must also include the Permit holder's Representative(s), Job Site Superintendent and the following consultants: Qualified Archaeologist, Qualified Native American Monitor

Note: Failure of all responsible Permit Holder's representatives and consultants to attend shall require an additional meeting with all parties present.

CONTACT INFORMATION:

- a) The PRIMARY POINT OF CONTACT is the **RE** at the **Field Engineering Division 858-627-3200**
- b) For Clarification of ENVIRONMENTAL REQUIREMENTS, it is also required to call **RE and MMC at 858-627-3360**

2. MMRP COMPLIANCE: This Project, Project Tracking System (PTS) No. 482858 and /or Environmental Document No. 482858, shall conform to the mitigation requirements contained in the associated Environmental Document and implemented to the satisfaction of the DSD's Environmental Designee (MMC) and the City Engineer (RE). The requirements may not be reduced or changed but may be annotated (i.e. to explain when and how compliance is being met and location of verifying proof, etc.). Additional clarifying information may also be added to other relevant plan sheets and/or specifications as appropriate (i.e., specific locations, times of monitoring, methodology, etc

Note: Permit Holder's Representatives must alert RE and MMC if there are any discrepancies in the plans or notes, or any changes due to field conditions. All conflicts must be approved by RE and MMC BEFORE the work is performed.

3. OTHER AGENCY REQUIREMENTS: Evidence of compliance with all other agency requirements or permits shall be submitted to the RE and MMC for review and acceptance prior to the beginning of work or within one week of the Permit Holder obtaining documentation of those permits or requirements. Evidence shall include copies of permits, letters of resolution or other documentation issued by the responsible agency. **Not Applicable**

4. MONITORING EXHIBITS

All consultants are required to submit, to RE and MMC, a monitoring exhibit on a 11x17 reduction of the appropriate construction plan, such as site plan, grading, landscape, etc., marked to clearly show the specific areas including the **LIMIT OF WORK**, scope of that discipline's work, and notes indicating when in the construction schedule that work will be performed. When necessary for clarification, a detailed methodology of how the work will be performed shall be included.

Note: Surety and Cost Recovery – When deemed necessary by the Development Services Director or City Manager, additional surety instruments or bonds from the private Permit Holder may be required to ensure the long term performance or implementation of required mitigation measures or programs. The City is authorized to recover its cost to offset the salary, overhead, and expenses for City personnel and programs to monitor qualifying projects.

5. OTHER SUBMITTALS AND INSPECTIONS:

The Permit Holder/Owner's representative shall submit all required documentation, verification letters, and requests for all associated inspections to the RE and MMC for approval per the following schedule:

DOCUMENT SUBMITTAL/INSPECTION CHECKLIST

Issue Area	Document Submittal	Associated Inspection/Approvals/Notes
General	Consultant Qualification Letters	Prior to Preconstruction Meeting
General	Consultant Construction Monitoring Exhibits	Prior to or at Preconstruction Meeting
Archaeology	Archaeological Reports	Archaeology/Historic Site Observation
Bond Release	Request for Bond Release Letter	Final MMRP Inspections Prior to Bond Release Letter

C. SPECIFIC MMRP ISSUE AREA CONDITIONS/REQUIREMENTS

I. Prior to Permit Issuance

A. Entitlements Plan Check

1. Prior to issuance of any construction permits, including but not limited to, the first Grading Permit, Demolition Plans/Permits and Building Plans/Permits or a Notice to Proceed for Subdivisions, but prior to the first preconstruction meeting, whichever is applicable, the Assistant Deputy Director (ADD) Environmental designee shall verify that the requirements for Archaeological Monitoring and Native American monitoring have been noted on the applicable construction documents through the plan check process.

B. Letters of Qualification have been submitted to ADD

- 1. The applicant shall submit a letter of verification to Mitigation Monitoring Coordination (MMC) identifying the Principal Investigator (PI) for the project and the names of all persons involved in the archaeological monitoring program, as defined in the City of San Diego Historical Resources Guidelines (HRG). If applicable, individuals involved in the archaeological monitoring program must have completed the 40-hour HAZWOPER training with certification documentation.
- 2. MMC will provide a letter to the applicant confirming the qualifications of the PI and all persons involved in the archaeological monitoring of the project meet the qualifications established in the HRG.
- 3. Prior to the start of work, the applicant must obtain written approval from MMC for any personnel changes associated with the monitoring program.

II. Prior to Start of Construction

A. Verification of Records Search

- 1. The PI shall provide verification to MMC that a site specific records search (1/4 mile radius) has been completed. Verification includes, but is not limited to a copy of a confirmation letter from South Coastal Information Center, or, if the search was inhouse, a letter of verification from the PI stating that the search was completed.
- 2. The letter shall introduce any pertinent information concerning expectations and probabilities of discovery during trenching and/or grading activities.
- 3. The PI may submit a detailed letter to MMC requesting a reduction to the ¼ mile radius.

B. PI Shall Attend Precon Meetings

- 1. Prior to beginning any work that requires monitoring; the Applicant shall arrange a Precon Meeting that shall include the PI, Native American consultant/monitor (where Native American resources may be impacted), Construction Manager (CM) and/or Grading Contractor, Resident Engineer (RE), Building Inspector (BI), if appropriate, and MMC. The qualified Archaeologist and Native American Monitor shall attend any grading/excavation related Precon Meetings to make comments and/or suggestions concerning the Archaeological Monitoring program with the Construction Manager and/or Grading Contractor.
 - a. If the PI is unable to attend the Precon Meeting, the Applicant shall schedule a focused Precon Meeting with MMC, the PI, RE, CM or BI, if appropriate, prior to the start of any work that requires monitoring.
- 2. Identify Areas to be Monitored
 - a. Prior to the start of any work that requires monitoring, the PI shall submit an Archaeological Monitoring Exhibit (AME) (with verification that the AME has been reviewed and approved by the Native American consultant/monitor when Native American resources may be impacted) based on the appropriate construction documents (reduced to 11x17) to MMC identifying the areas to be monitored including the delineation of grading/excavation limits.
 - b. The AME shall be based on the results of a site specific records search as well as information regarding existing known soil conditions (native or formation).
- 3. When Monitoring Will Occur
 - a. Prior to the start of any work, the PI shall also submit a construction schedule to MMC through the RE indicating when and where monitoring will occur.
 - b. The PI may submit a detailed letter to MMC prior to the start of work or during construction requesting a modification to the monitoring program. This request shall be based on relevant information such as review of final construction documents which indicate site conditions such as depth of excavation and/or site graded to bedrock, etc., which may reduce or increase the potential for resources to be present.

III. During Construction

- A. Monitor(s) Shall be Present During Grading/Excavation/Trenching
 - 1. The Archaeological Monitor shall be present full-time during all soil disturbing and grading/excavation/trenching activities which could result in impacts to archaeological resources as identified on the AME. The Construction Manager is responsible for notifying the RE, PI, and MMC of changes to any construction activities such as in the case of a potential safety concern within the area being monitored. In certain circumstances OSHA safety requirements may necessitate modification of the AME.
 - The Native American consultant/monitor shall determine the extent of their
 presence during soil disturbing and grading/excavation/trenching activities based on
 the AME and provide that information to the PI and MMC. If prehistoric resources are
 encountered during the Native American consultant/monitor's absence, work shall
 stop and the Discovery Notification Process detailed in Section III.B-C and IV.A-D shall
 commence.
 - 3. The PI may submit a detailed letter to MMC during construction requesting a modification to the monitoring program when a field condition such as modern

- disturbance post-dating the previous grading/trenching activities, presence of fossil formations, or when native soils are encountered that may reduce or increase the potential for resources to be present.
- 4. The archaeological and Native American consultant/monitor shall document field activity via the Consultant Site Visit Record (CSVR). The CSVR's shall be faxed by the CM to the RE the first day of monitoring, the last day of monitoring, monthly (Notification of Monitoring Completion), and in the case of ANY discoveries. The RE shall forward copies to MMC.

B. Discovery Notification Process

- 1. In the event of a discovery, the Archaeological Monitor shall direct the contractor to temporarily divert all soil disturbing activities, including but not limited to digging, trenching, excavating or grading activities in the area of discovery and in the area reasonably suspected to overlay adjacent resources and immediately notify the RE or BI, as appropriate.
- 2. The Monitor shall immediately notify the PI (unless Monitor is the PI) of the discovery.
- 3. The PI shall immediately notify MMC by phone of the discovery, and shall also submit written documentation to MMC within 24 hours by fax or email with photos of the resource in context, if possible.
- 4. No soil shall be exported off-site until a determination can be made regarding the significance of the resource specifically if Native American resources are encountered.

C. Determination of Significance

- 1. The PI and Native American consultant/monitor, where Native American resources are discovered shall evaluate the significance of the resource. If Human Remains are involved, follow protocol in Section IV below.
 - a. The PI shall immediately notify MMC by phone to discuss significance determination and shall also submit a letter to MMC indicating whether additional mitigation is required.
 - b. If the resource is significant, the PI shall submit an Archaeological Data Recovery Program (ADRP) which has been reviewed by the Native American consultant/monitor, and obtain written approval from MMC. Impacts to significant resources must be mitigated before ground disturbing activities in the area of discovery will be allowed to resume. Note: If a unique archaeological site is also an historical resource as defined in CEQA, then the limits on the amount(s) that a project applicant may be required to pay to cover mitigation costs as indicated in CEQA Section 21083.2 shall not apply.
 - c. If the resource is not significant, the PI shall submit a letter to MMC indicating that artifacts will be collected, curated, and documented in the Final Monitoring Report. The letter shall also indicate that that no further work is required.

IV. Discovery of Human Remains

If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains; and the following procedures as set forth in CEQA Section 15064.5(e), the California Public Resources Code (Sec. 5097.98) and State Health and Safety Code (Sec. 7050.5) shall be undertaken:

A. Notification

- 1. Archaeological Monitor shall notify the RE or BI as appropriate, MMC, and the PI, if the Monitor is not qualified as a PI. MMC will notify the appropriate Senior Planner in the Environmental Analysis Section (EAS) of the Development Services Department to assist with the discovery notification process.
- 2. The PI shall notify the Medical Examiner after consultation with the RE, either in person or via telephone.

B. Isolate discovery site

- 1. Work shall be directed away from the location of the discovery and any nearby area reasonably suspected to overlay adjacent human remains until a determination can be made by the Medical Examiner in consultation with the PI concerning the provenance of the remains.
- 2. The Medical Examiner, in consultation with the PI, will determine the need for a field examination to determine the provenance.
- 3. If a field examination is not warranted, the Medical Examiner will determine with input from the PI, if the remains are or are most likely to be of Native American origin.

C. If Human Remains ARE determined to be Native American

- 1. The Medical Examiner will notify the Native American Heritage Commission (NAHC) within 24 hours. By law, **ONLY** the Medical Examiner can make this call.
- 2. NAHC will immediately identify the person or persons determined to be the Most Likely Descendent (MLD) and provide contact information.
- 3. The MLD will contact the PI within 24 hours or sooner after the Medical Examiner has completed coordination, to begin the consultation process in accordance with CEQA Section 15064.5(e), the California Public Resources and Health & Safety Codes.
- 4. The MLD will have 48 hours to make recommendations to the property owner or representative, for the treatment or disposition with proper dignity, of the human remains and associated grave goods.
- 5. Disposition of Native American Human Remains will be determined between the MLD and the PI, and, if:
 - a. The NAHC is unable to identify the MLD, OR the MLD failed to make a recommendation within 48 hours after being notified by the Commission; OR;
 - b. The landowner or authorized representative rejects the recommendation of the MLD and mediation in accordance with PRC 5097.94 (k) by the NAHC fails to provide measures acceptable to the landowner, THEN,
 - c. In order to protect these sites, the Landowner shall do one or more of the following:
 - (1) Record the site with the NAHC;
 - (2) Record an open space or conservation easement on the site;
 - (3) Record a document with the County.
 - d. Upon the discovery of multiple Native American human remains during a ground disturbing land development activity, the landowner may agree that additional conferral with descendants is necessary to consider culturally appropriate treatment of multiple Native American human remains. Culturally appropriate treatment of such a discovery may be ascertained from review of the site utilizing cultural and archaeological standards. Where the parties are unable to agree on the appropriate treatment measures the human remains and items

associated and buried with Native American human remains shall be reinterred with appropriate dignity, pursuant to Section 5.c., above.

- D. If Human Remains are **NOT** Native American
 - 1. The PI shall contact the Medical Examiner and notify them of the historic era context of the burial.
 - 2. The Medical Examiner will determine the appropriate course of action with the PI and City staff (PRC 5097.98).
 - 3. If the remains are of historic origin, they shall be appropriately removed and conveyed to the San Diego Museum of Man for analysis. The decision for internment of the human remains shall be made in consultation with MMC, EAS, the applicant/landowner, any known descendant group, and the San Diego Museum of Man.

V. Night and/or Weekend Work

- A. If night and/or weekend work is included in the contract
 - 1. When night and/or weekend work is included in the contract package, the extent and timing shall be presented and discussed at the precon meeting.
 - 2. The following procedures shall be followed.
 - a. No Discoveries In the event that no discoveries were encountered during night and/or weekend work, the PI shall record the information on the CSVR and submit to MMC via fax by 8AM of the next business day.
 - Discoveries
 All discoveries shall be processed and documented using the existing procedures detailed in Sections III During Construction, and IV Discovery of Human Remains. Discovery of human remains shall always be treated as a significant discovery.
 - c. Potentially Significant Discoveries

 If the PI determines that a potentially significant discovery has been made, the procedures detailed under Section III During Construction and IV-Discovery of Human Remains shall be followed.
 - d. The PI shall immediately contact MMC, or by 8AM of the next business day to report and discuss the findings as indicated in Section III-B, unless other specific arrangements have been made.
- B. If night and/or weekend work becomes necessary during the course of construction
 - 1. The Construction Manager shall notify the RE, or BI, as appropriate, a minimum of 24 hours before the work is to begin.
 - 2. The RE, or BI, as appropriate, shall notify MMC immediately.
- C. All other procedures described above shall apply, as appropriate.

VI. Post Construction

- A. Preparation and Submittal of Draft Monitoring Report
 - 1. The PI shall submit two copies of the Draft Monitoring Report (even if negative), prepared in accordance with the Historical Resources Guidelines (Appendix C/D) which describes the results, analysis, and conclusions of all phases of the Archaeological Monitoring Program (with appropriate graphics) to MMC for review and approval within 90 days following the completion of monitoring. It should be

noted that if the PI is unable to submit the Draft Monitoring Report within the allotted 90-day timeframe resulting from delays with analysis, special study results or other complex issues, a schedule shall be submitted to MMC establishing agreed due dates and the provision for submittal of monthly status reports until this measure can be met.

- a. For significant archaeological resources encountered during monitoring, the Archaeological Data Recovery Program shall be included in the Draft Monitoring Report.
- b. Recording Sites with State of California Department of Parks and Recreation The PI shall be responsible for recording (on the appropriate State of California Department of Park and Recreation forms-DPR 523 A/B) any significant or potentially significant resources encountered during the Archaeological Monitoring Program in accordance with the City's Historical Resources Guidelines, and submittal of such forms to the South Coastal Information Center with the Final Monitoring Report.
- 2. MMC shall return the Draft Monitoring Report to the PI for revision or, for preparation of the Final Report.
- 3. The PI shall submit revised Draft Monitoring Report to MMC for approval.
- 4. MMC shall provide written verification to the PI of the approved report.
- 5. MMC shall notify the RE or BI, as appropriate, of receipt of all Draft Monitoring Report submittals and approvals.

B. Handling of Artifacts

- 1. The PI shall be responsible for ensuring that all cultural remains collected are cleaned and catalogued
- 2. The PI shall be responsible for ensuring that all artifacts are analyzed to identify function and chronology as they relate to the history of the area; that faunal material is identified as to species; and that specialty studies are completed, as appropriate.
- 3. The cost for curation is the responsibility of the property owner.
- C. Curation of artifacts: Accession Agreement and Acceptance Verification
 - 1. The PI shall be responsible for ensuring that all artifacts associated with the survey, testing and/or data recovery for this project are permanently curated with an appropriate institution. This shall be completed in consultation with MMC and the Native American representative, as applicable.
 - 2. The PI shall include the Acceptance Verification from the curation institution in the Final Monitoring Report submitted to the RE or BI and MMC.
 - 3. When applicable to the situation, the PI shall include written verification from the Native American consultant/monitor indicating that Native American resources were treated in accordance with state law and/or applicable agreements. If the resources were reinterred, verification shall be provided to show what protective measures were taken to ensure no further disturbance occurs in accordance with Section IV Discovery of Human Remains, Subsection 5.

D. Final Monitoring Report(s)

- 1. The PI shall submit one copy of the approved Final Monitoring Report to the RE or BI as appropriate, and one copy to MMC (even if negative), within 90 days after notification from MMC that the draft report has been approved.
- 2. The RE shall, in no case, issue the Notice of Completion and/or release of the Performance Bond for grading until receiving a copy of the approved Final

Monitoring Report from MMC which includes the Acceptance Verification from the curation institution.

Figure 1: Location Map Figure 2: Site Plan

INITIAL STUDY CHECKLIST

- 1. Project title/Project number: Moana Drive / 482858
- 2. Lead agency name and address: City of San Diego, 1222 First Avenue, MS-501, San Diego, California 92101
- 3. Contact person and phone number: Morgan Dresser/ (619) 446-5404
- 4. Project location: 1225 Moana Drive, San Diego, California 92107
- 5. Project Applicant/Sponsor's name and address: Bennett Dahlin, 3036 Meadow Grove Drive, San Diego California 92110
- 6. General/Community Plan designation: Single-Family Residential
- 7. Zoning: RS-1-7
- 8. Description of project (Describe the whole action involved, including but not limited to, later phases of the project, and any secondary, support, or off-site features necessary for its implementation.):

The project is requesting a COASTAL DEVELOPMENT PERMIT for the construction of an approximately 2,389-square-foot two-story single dwelling unit and a 459-square-foot two-story detached garage and accessory dwelling unit on an existing vacant lot. Various site improvements would also be constructed including associated hardscape and landscape. Both structures would not exceed 30 feet in height.

The project landscaping has been reviewed by City Landscape staff and would comply with all applicable City of San Diego Landscape ordinances and standards. Drainage would be directed into appropriate storm drain systems designated to carry surface runoff, which has been reviewed and accepted by City Engineering staff. Ingress to the project site would be via an unnamed alley in the rear. All parking would be provided on-site.

Grading for the project would entail approximately 5 cubic yards of cut and 58 cubic yards of fill.

9. Surrounding land uses and setting: Briefly describe the project's surroundings:

The vacant 6,250-square-foot project site is located at 1121 Moana Drive. The site is generally bound by Savoy Street to the east and Moana Drive to the west, La Paloma Street to the north and Varona Street to the south. Surrounding uses include residential development to the north, south, east and west. The primary access to the property is from an unnamed alley in the rear.

The project site is designated Residential and zoned RS-1-7 within the Peninsula Community Plan Area. Additionally, the project site is within the Airports Approach Overlay Zone, Airport Influence Area (Review Area 2), FAA Part 77 Noticing Area, Coastal Height Limitation Overlay Zone, Coastal Overlay Zone (Non-Appealable 2), and Parking Impact Overlay Zone (Coastal).

- 10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.):
 - None Required.
- 11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?

In accordance with the requirements of Assembly Bill (AB) 52, the City of San Diego sent notification to two Native American Tribes traditionally and culturally affiliated with the project area on June 8, 2017. Both the lipay Nation of Santa Ysabel and the Jamul Indian Village responded within the 30-day period requesting consultation and additional information. Consultation took place on June 21, 2017.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.						
	Aesthetics		Greenhouse Gas Emissions		Population/Housing	
	Agriculture and Forestry Resources		Hazards & Hazardous Materials		Public Services	
	Air Quality		Hydrology/Water Quality		Recreation	
	Biological Resources		Land Use/Planning		Transportation/Traffic	
\boxtimes	Cultural Resources		Mineral Resources		Tribal Cultural Resources	
	Geology/Soils		Noise		Utilities/Service System	
				\boxtimes	Mandatory Findings Significance	
DETER	MINATION: (To be completed	by Lead A	gency)			
On the	basis of this initial evaluation:					
	The proposed project COULD prepared.	NOT have	a significant effect on the en	vironment	t, and a NEGATIVE DECLARATION will be	
		in the pro	ject have been made by or ag		ent, there will not be a significant effect y the project proponent. A MITIGATED	
	The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.					
The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (a) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (b) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required.						
	Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or (MITIGATED) NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or (MITIGATED) NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.					

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact answer should be explained where it is based on project specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis.)
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses", as described in (5) below, may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or (mitigated) negative declaration. *Section 15063(c)(3)(D)*. In this case, a brief discussion should identify the following:
 - a. Earlier Analysis Used. Identify and state where they are available for review.
 - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated", describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
 - a. The significance criteria or threshold, if any, used to evaluate each question; and
 - b. The mitigation measure identified, if any, to reduce the impact to less than significant.

	Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact	
l)	AESTHETICS – Would the project:					
	a) Have a substantial adverse effect on a scenic vista?				\boxtimes	
Coa	There are no scenic vistas or view corridors identified in the Peninsula Community Plan and Local Coastal Program Land Use Plan. Therefore, the project would not have a substantial adverse effect on a scenic vista.					
	b) Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?					
No are	significant scenic resources exist onsite a.	e. The project	t is not located with	in a scenic h	ighway	
	c) Substantially degrade the existing visual character or quality of the site and its surroundings?					
ado	e project site is currently undeveloped with a comparable single-family resivelopment and is consistent with the cod. d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?	dential unit	is compatible with t	he surround:		
per pro con be : res	Development of the residential project would comply with all applicable City regulations. All permanent exterior lighting is required to avoid potential adverse effects on neighboring properties. In addition, no substantial sources of light would be generated during project construction, as construction activities would occur during daylight hours. The project would also be subject to the City's Outdoor Lighting Regulations per Municipal Code Section 142.0740. As a result, the proposed project would not result in the creation of a new source of substantial light or glare that would affect day or nighttime views in the area.					
	Forestry and Fire Protection regarding the state? Project and the Forest Legacy Assessment project Protocols adopted by the California Air Resource	s inventory of foct; and forest ca	orest land, including the orbon measurement met	Forest and Rang	ge Assessment	
	a) Converts Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the					

Potentially Less Than Significant with Issue Significant Significant No Impact Mitigation Impact **Impact** Incorporated Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? The project site is within a developed single-family residential neighborhood and designated single-family in the Peninsula Community Plan and Local Coastal Program Land Use Plan. This area is not classified as farmland by the Farmland Mapping and Monitoring Program (FMMP). Similarly, lands surround the project is not in agricultural production and is not classified as farmland by the FMMP. Therefore, the project would not convert farmland to non-agricultural uses. Conflict with existing zoning for \boxtimes agricultural use, or a Williamson Act Contract? Refer to response II (a), above. There are no Williamson Act Contract lands on or within the vicinity of the project. The project would not affect any properties zoned for agricultural use or be affected by a Williamson Act Contract. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 1220(g)), timberland (as \boxtimes defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? The project site is zoned for residential development and would not require a rezone. No designated forest land or timberland occurs within the boundaries of the project. Result in the loss of forest land or \boxtimes conversion of forest land to non-forest use? Refer to response II(c), above. The project site is zoned for residential development and would not require a rezone. Additionally the project site does not contain forest land or timberland. Involve other changes in the existing environment, which, due to their location or nature, could result in \boxtimes conversion of Farmland to nonagricultural use or conversion of forest land to non-forest use?

Less Than

Refer to responses II (a) and II (c), above. The project and surrounding area do not contain any farmland or forest land. No changes to any such lands would result from project implementation.

III. AIR QUALITY - Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied on to make the following determinations - Would the project:

lss	sue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Conflict with or obstruct implementation of the applicable air quality plan?				
The project site is located within an area of similar uses and is designated for residential development in the Peninsula Community Plan and Local Coastal Program Land Use Plan. The project would not negatively impact goals of the applicable air quality plan. Furthermore the project is consistent with applicable General and Community Plan land use designations and the underlying zone.					
b)	Violate any air quality standard or contribute substantially to an existing or projected air quality violation?				
Short-Term (Construction) Emissions. Construction-related activities are temporary, short-term sources of air emissions. Sources of construction-related air emissions include fugitive dust from grading activities; construction equipment exhaust; construction-related trips by workers, delivery trucks, and material-hauling trucks; and construction-related power consumption.					
Variables that factor into the total construction emissions potentially generated include the level of activity, length of construction period, number of pieces and types of equipment in use, site characteristics, weather conditions, number of construction personnel, and the amount of materials to be transported on or offsite.					
Fugitive dust emissions are generally associated with land-clearing and grading operations. Construction operations would include standard measures as required by City of San Diego grading permit to limit potential air quality impacts. Therefore, impacts associated with fugitive dust are considered less than significant, and would not violate an air quality standard or contribute substantially to an existing or projected air quality violation. No mitigation measures are required.					
Long-Term (Operational) Emissions. Long-term air emission impacts are those associated with stationary sources and mobile sources related to any change caused by a project. The project would produce minimal stationary sources emissions. The project is compatible with the surrounding development and is permitted by the community plan and zone designation. Based on the residential land use, project emissions over the long-term are not anticipated to violate any air quality standard or contribute substantially to an existing or projected air quality violation. Impacts would be less than significant and no mitigation measures are required.					
c)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?				

Issue	Significant Impact	Mitigation Incorporated	Significant Impact	No Impact

Water Act (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?		inco. por accu		
The project site is developed with non-lar States on or near the site. No significant required.	•			
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				
The project is not located adjacent to an movement of any wildlife or the use of an occur and no mitigation measures are re	ny wildlife nurs			
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				
The proposed project is located on a devordinances protecting biological resource	•		are no local p	olicies or
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				\boxtimes
The project is located in a developed urban area and is not within or adjacent to the City's Multi-Habitat Planning Area (MHPA) and no other adopted conservation plans affect the subject site. The project would not conflict with any local conservation plans. Therefore, no impacts would occur, and no mitigation measures are required.				
V. CULTURAL RESOURCES – Would the project:				
 Cause a substantial adverse change in the significance of an historical resource as defined in §15064.5? 				

The purpose and intent of the Historical Resources Regulations of the Land Development Code (Chapter 14, Division 3, and Article 2) is to protect, preserve and, where damaged, restore the historical resources of San Diego. The regulations apply to all proposed development within the City of San Diego when historical resources are present on the premises. Before approving

Potentially Less Than
Issue Significant Mitigation Impact
Impact Incorporated

discretionary projects, CEQA requires the Lead Agency to identify and examine the significant adverse environmental effects which may result from that project. A project that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (Sections 15064.5(b) and 21084.1). A substantial adverse change is defined as demolition, destruction, relocation, or alteration activities, which would impair historical significance (Sections 15064.5(b)(1)). Any historical resource listed in, or eligible to be listed in the California Register of Historical Resources, including archaeological resources, is considered to be historically or culturally significant.

Archaeological Resources

The project site is located on the City of San Diego's Historical Resources Sensitivity Map. Furthermore the project site has not been documented as developed. Therefore, a record search of the California Historic Resources Information System (CHRIS) digital database was reviewed to determine presence or absence of potential resources within the project site by qualified archaeological City staff. Additionally an Archaeological Survey was completed. The survey concluded there was insufficient data on the surface of the lot to determine if there are archaeological deposits.

Therefore, a Mitigation Monitoring Reporting Program (MMRP), as detailed within Section V of the MND, would be implemented. With implementation of the MMRP, potential impacts on historical resources would be reduced to less than significant.

Built Environment

The City of San Diego criteria for determination of historic significance, pursuant to CEQA is evaluated based upon age (over 45 years), location, context, association with an important event, uniqueness, or structural integrity of the building. In addition, projects requiring the demolition of structures that are 45 years or older are also reviewed for historic significance in compliance with CEQA. There are no structures on the property therefore there is no eligibility for designation under any Historical Resources Board designation criteria.

b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	\boxtimes	
	resource pursuant to \$15004.5?		

The project site is located on the City of San Diego's Historical Resources Sensitivity Map. Furthermore the project site has not been documented as developed. Therefore, a record search of the California Historic Resources Information System (CHRIS) digital database was reviewed to determine presence or absence of potential resources within the project site by qualified archaeological City staff. Additionally an Archaeological Survey was completed. The survey concluded there was insufficient data on the surface of the lot to determine if there are archaeological deposits.

Therefore, a Mitigation Monitoring Reporting Program (MMRP), as detailed within Section V of the MND, would be implemented. With implementation of the MMRP, potential impacts on historical resources would be reduced to less than significant.

	Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		\boxtimes		

According to the "Geology of the San Diego Metropolitan Area, California, La Jolla, 7.5 Minute Quadrangle Maps" (Kennedy and Peterson, 1975), the project site is underlain by Lindavista Formation, which has moderate sensitivity level for fossil resource potential (paleontological resources).

The Lindavista Formation represents a marine and/or non-marine terrace deposit of early Pleistocene age (approximately 0.5 – 1.5 Ma). Typical exposures of the formation consist of rust-red, coarse-grained, pebbly sandstones and pebble conglomerates with locally common deposits of green claystone. The Lindavista Formation has an average thickness of about 20-30 feet and is thought to have been deposited under fluvial, aeolian, and shallow nearshore marine conditions. These deposits accumulated on a flat, wave-cut platform during a period of dropping sea levels. Today, these deposits form the extensive mesa surfaces characteristic of the Otay Mesa, San Diego Mesa, Linda Vista Mesa, Kearny Mesa, and Mira Mesa areas of the County.

Fossil localities are rare in the Lindavista Formation and have only been recorded from a few areas. Fossils collected from these sites consist of remains of nearshore marine invertebrates including clams, scallops, snails, barnacles, and sand dollars, as well as sparse remains of sharks and baleen whales.

The Lindavista Formation as mapped by Kennedy (1975) and Kennedy and Tan (1977) occurs over a large area from the International Boarder north to San Clemente. Over this region the formation and its associated series of elevated terraces forms a conspicuous planar surface between the foothills of the Peninsular Range Province and the western edge of the higher coastal terraces. These higher mesa surfaces are best preserved south of Black Mountain. To the north of Black Mountain the higher terraces have been extensively dissected by erosion and only remain as small, isolated remnants. Based on the sparsity of the fossils reported from this rock unit the Lindavista Formation is assigned a moderate paleontological resource sensitivity.

The project proposes 5 cubic yards of cut to a depth of approximately 2 feet which would not exceed the City's Significance Determination Thresholds. Therefore no impact would result and mitigation is not required.

d)	Disturb and human remains, including		
	those interred outside of dedicated		\boxtimes
	cemeteries?		

No human remains have been documented within the project area. No cemeteries, formal or informal have been identified onsite.

VI. GEOLOGY AND SOILS - Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact	
 Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. 					
The site is not traversed by an active, potentially active, or inactive fault and is not within an Alquist-Priolo Fault Zone. The project would be required to comply with seismic requirement of the California Building Code, utilize proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, in order to ensure that potential impacts based on regional geologic hazards would remain less than significant and mitigation is not required.					
ii) Strong seismic ground shaking?			\boxtimes		
The site could be affected by seismic activity as a result of earthquakes on major active faults located throughout the Southern California area. The project would utilize proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, in order to ensure that potential impacts from regional geologic hazards would remain less than significant and mitigation is not required.					
iii) Seismic-related ground failure, including liquefaction?					
Liquefaction occurs when loose, unconsolidated, water-laden soils are subject to shaking, causing the soils to lose cohesion. Implementation of the project would not result in an increase in the potential for seismic-related ground failure, including liquefaction. The project would utilize proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, in order to ensure that potential impacts from regional geologic hazards would remain less than significant and mitigation is not required.					
iv) Landslides?					
The City of San Diego Seismic Safety Study Maps (1995 Edition, Map 30) have designated the geology at the project location as being within the City of San Diego Geologic Hazard Category 52 which is categorized as other level areas, gently sloping to steep terrain, favorable geologic structure with low risk. The project would utilize proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, in order to ensure that potential impacts from regional geologic hazards would remain less than significant and mitigation is not required. No mitigation measures are required. b) Result in substantial soil erosion or the loss of topsoil?					

Potentially Less Than Significant with Issue Significant Significant No Impact Mitigation Impact **Impact** Incorporated Construction of the project would temporarily disturb onsite soils during grading activities, thereby increasing the potential for soil erosion to occur; however, the use of standard erosion control measures during construction would reduce potential impacts to a less than a significant level. In addition, the site would be landscaped in accordance with the City requirements which would also preclude erosion or topsoil loss and all storm water requirements would be met. Therefore, impacts would be less than significant, and no mitigation measures are required. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and \boxtimes potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? The City of San Diego Seismic Safety Study Maps (1995 Edition, Map 30) have designated the geology at the project location as being within the City of San Diego Geologic Hazard Category 52. Hazard Category 52 which is categorized as other level areas, gently sloping to steep terrain, favorable geologic structure with low risk. The project would utilize proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, in order to ensure that potential impacts from regional geologic hazards would remain less than significant and mitigation is not required. d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform П \boxtimes Building Code (1994), creating substantial risks to life or property? The City of San Diego Seismic Safety Study Maps (1995 Edition, Map 30) have designated the geology at the project location as being within the City of San Diego Geologic Hazard Category 56. Hazard Category 52 which is categorized as other level areas, gently sloping to steep terrain, favorable geologic structure with low risk. The project would utilize proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, in order to ensure that potential impacts from regional geologic hazards would remain less than significant and mitigation is not required. e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal \boxtimes systems where sewers are not

Less Than

The project site is located within an area that is already developed with existing infrastructure (i.e., water and sewer lines) and does not propose any septic system. In addition, the project as proposed does not require the construction of any new facilities as it relates to wastewater, as services are available to serve the project. No impact would occur.

VII. GREENHOUSE GAS EMISSIONS - Would the project:

available for the disposal of waste

water?

Issue	Potentially Significant Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact	
 a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? 		Incorporated			
The City's Climate Action Plan (CAP) outlines the actions that the City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions. A CAP Consistency Checklist (Checklist) is part of the CAP and contains measures that are required to be implemented on a project-by-project basis to ensure that the specified emission targets identified in the CAP are achieved.					
The project is consistent with the existing General Plan and Community Plan land use and zoning designations. Further based upon review and evaluation of the completed CAP Consistency Checklist for the project, the project is consistent with the applicable strategies and actions of the CAP. Therefore, the project is consistent with the assumptions for relevant CAP strategies toward achieving the identified GHG reduction targets, and impacts from greenhouse gas emissions are considered less than significant. No mitigation is required.					
b) Conflict with the City's Climate Action Plan or another applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?					
The project would not conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing the emissions of greenhouse gases. The project is consistent with the existing General Plan and Community Plan land use and zoning designations. Further based upon review and evaluation of the completed CAP Consistency Checklist for the project, the project is consistent with the applicable strategies and actions of the CAP. Therefore, the project is consistent with the assumptions for relevant CAP strategies toward achieving the identified GHG reduction targets. Impacts are considered less than significant. No mitigation is required.					
VIII. HAZARDS AND HAZARDOUS MATERIALS – Woul	d the project:				
 a) Create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials? 					
Construction of the project may require the use of hazardous materials (fuels, lubricants, solvents, etc.), which would require proper storage, handling, use and disposal. Although minimal amounts of such substances may be present during construction of the project, they are not anticipated to create a significant public hazard. Once constructed, due to the nature of the project, the routine transport, use, or disposal of hazardous materials on or through the subject site is not anticipated. Therefore, impacts would be less than significant, and no mitigation is required.					
 b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the 			\boxtimes		

Issue		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact	
	se of hazardous materials into the onment?					
disposal of would not b	As noted above in response VIII (a), no health risks related to the storage, transport, use, or disposal of hazardous materials would result from the implementation of the project. The project would not be associated with such impacts. Therefore, no significant impacts related to this issue were identified, and no mitigation measures are required.					
haza mate one-c	hazardous emissions or handle rdous or acutely hazardous rials, substances, or waste within quarter mile of an existing or osed school?					
site. Howev	r Elementary School is located wer, the proposed project would that would affect any existing c	not be expec	ted to emit hazar	dous materia

XIII. POP	PULATION AND HOUSING – Would the project	:			
a)	Induce substantial population growth in an area, either directly (for example,				\boxtimes

Less Than Potentially Less Than Significant with Issue Significant Significant No Impact Mitigation Impact **Impact** Incorporated by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? The project site is located in a developed neighborhood and is surrounded by similar development. The site currently receives water and sewer service from the City, and no extension of infrastructure to new areas is required. As such, the project would not substantially increase housing or population growth in the area. No roadway improvements are proposed as part of the project. Impacts would be less than significant, and no mitigation measures are required. Displace substantial numbers of existing housing, necessitating the \boxtimes \Box П construction of replacement housing elsewhere? No such displacement would result. The project would construct new single-family dwelling unit. No impacts would occur. Displace substantial numbers of \boxtimes people, necessitating the construction of replacement housing elsewhere? No such displacement would result. The project would construct new single-family dwelling unit. No impacts would occur. XIV. PUBLIC SERVICES Would the project result in substantial adverse physical impacts associated with the provisions of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service rations, response times or other performance objectives for any of the public services: Fire Protection X The project site is located in an urbanized and developed area where fire protection services are already provided. The project would not adversely affect existing levels of fire protection services to the area, and would not require the construction of new or expansion of existing governmental facilities. No impacts would occur, and no mitigation measures are required. \boxtimes ii) Police Protection The project site is located in an urbanized and developed area within the City of San Diego where police protection services are already provided. The project would not adversely affect existing levels of police protection services or create significant new significant demand, and would not require the construction of new or expansion of existing governmental facilities. No impacts would occur, and no mitigation measures are required. \boxtimes iii) Schools

Iss	sue	Significant Impact	Significant with Mitigation Incorporated	Significant Impact	No Impact

cultural geograp	BAL CULTURAL RESOURCES- Would the proje resource, defined in Public Resources Code so hically defined in terms of the size and scope a Native American tribe, and that is:	ection 21074 as	either a site, feature, p	lace, cultural lan	dscape that is
a)	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or				
of Histo Code s	orded sites within the project area a orical Resources or in a local register ection 5020.1 (k). Additionally, as pre oring during ground disturbing activi	r of historica eviously iden	l resources as defir tified in Section V(a	ned in Public	Resources
b)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.				

There is potential for Tribal Cultural Resources pursuant to subdivision (c) of Public Resources Code Section 5024.1 (c) to exist on the project site, however, it was determined through the consultation process that resources would not be adversely impacted by the proposed project. Additionally, as previously identified in Section V(a), monitoring during ground disturbing activities would be required.

In accordance with the requirements of Assembly Bill (AB) 52, the City of San Diego sent notification to two Native American Tribes traditionally and culturally affiliated with the project area on June 8, 2017. Both the lipay Nation of Santa Ysabel and the Jamul Indian Village requested consultation within the 30-days. Consultation took place on June 21, 2017 with the lipay Nation of Santa Ysabel and it was determined that there are no sites, features, places or cultural landscapes that would be would be substantially adversely impacted by the proposed project. The lipay Nation of Santa Ysabel identified no further work was required and concluded consultation. On June 29, 2017 Jamul Indian Village also concurred and concluded consultation. With implementation of the MMRP, potential impacts to historical resources and tribal cultural resources would be reduced to less than significant.

XVIII. UTILITIES AND SERVICE SYSTEMS - Would the project: Exceed wastewater treatment \boxtimes requirements of the applicable Regional Water Quality Control Board? Wastewater facilities used by the project would be operated in accordance with the applicable wastewater treatment requirements of the Regional Water Quality Control Board (RWQCB). Treatment of effluent from the site is anticipated to be routine and is not expected to exceed the wastewater treatment requirements of the RWQCB. Existing sewer infrastructure exists within roadways surrounding the project site. Thus, impacts would be less than significant. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing \boxtimes facilities, the construction of which could cause significant environmental effects? See XVII (a) above. Adequate services are available to serve the site and the project would not

require the construction or expansion of existing facilities.

c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the Construction of which could cause significant environmental effects?

Construction of the project would introduce additional impervious surfaces, such as hardscape and rooftops. The development of the property, as proposed, would result in an increase in runoff when compared to the existing site conditions. The increase in runoff is not expected to

Iss	ue	Potentially Significant Impact	Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

g)	Comply with federal, state, and local statutes and regulation related to solid waste?				
Tl	ata aka. dal wa a. da ta laka a da wal			6	

The project would result in standard consumption that is not anticipated to result in new and/or additional impacts. The project would comply with all federal, state, and local statues for solid waste disposal as they relate to the project. All demolition activities would comply with any City of

Issue	Potentially Significant Impact	Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
San Diego requirements for diversion of and solid waste during the long-term, op		_	the demolition	phase
XIX. MANDATORY FINDINGS OF SIGNIFICANCE -				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				
As documented in this Initial Study, the pathe environment, notably with respect to measures have been incorporated to reconstitution.	Cultural Reso	urces (Archaeolog	y). As such, mi	tigation
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable futures projects)?				
The project may have the potential to de Resources (Archaeology), which may hav measures have been proposed to reduce within the surrounding neighborhood or local, State, and Federal regulations to reextent possible. As such, the project is no cumulative environmental impacts.	ye cumulatively e impacts to lest community wo educe potential	considerable imp is than significant. ould be required t impacts to less th	acts. As such, r Other future po comply with an significant,	mitigation orojects applicable or to the
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?			\boxtimes	

The construction of new single-family dwelling unit is consistent with the setting and with the use anticipated by the City. It is not anticipated that construction activities would create conditions that would significantly directly or indirectly impact human beings. Impacts would be less than significant.
