

Pure Water San Diego

TEST YOUR PURE WATER KNOWLEDGE!

Water is essential for life. We need it for cooking, cleaning, bathing, watering lawns, and drinking! In San Diego, most of our water is imported, or brought in, from Northern California and the Colorado River. Importing water costs a lot of money. Also, many other people use the water before it gets to San Diego.

The City of San Diego is creating a local water supply, with the construction of the 10 Phase 1 construction projects that make up Pure Water San Diego.

With Pure Water San Diego, the City is making the water that San Diegans flush down their drains clean enough to be used again for drinking.

This activity page will help you learn more about the Pure Water Program.

match the technology

que

Five technologies used in the Pure Water Program are described below.

Write the name of the technology underneath the matching picture.

OZON★TiON: ozone gas destroys germs and breaks down contaminants while the water is sent through a long series of pipes.

BiOLOGICAL ACTIVATED CARBON (BAC) FILTERS: filters covered in "helpful" bacteria eat anything that is or was living. The "helpful" bacteria are removed in the next step.

MEMBRANE FILTRATION: consists of "straws" with holes in the side that suck in the water and keep out the contaminants. The Pure Water Program uses microfiltration and ultrafiltration.

REVERSE OSMOSIS: forces water through several sheets of thin plastic membranes to filter out anything bigger than a water molecule, such as minerals and contaminants. The RO membranes are like microscopic strainers.

ULTRAVIOLET DISINFECTION/ADVANCED OXIDATION: intense light, like sunlight, that works with sodium hypochlorite to zap any remaining contaminants in the water.

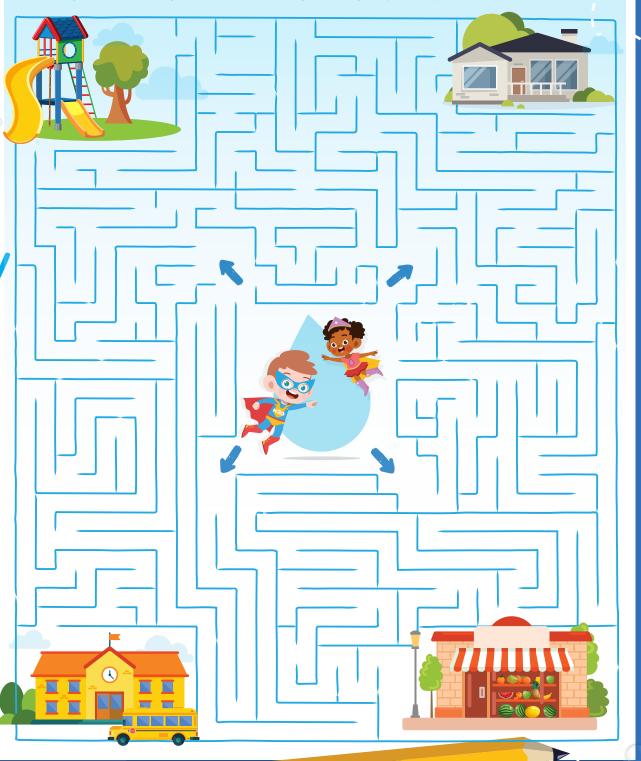

1923

Help our water superhero find his way to the park, home, school and business.

QUIZ!

Some are TRUE.

Some are FRLSE.

Circle T if a statement is true and

F if a statement is false.

	I. The water coming out of your faucet contains molecules that the dinosaurs drank.	T	F
2	2. Most of San Diego's water supply comes from local rainfall.	T	F
;	3. San Diego is at the end of the pipeline when importing water from the Colorado River and Northern California.	T	F
1	4. The City of San Diego's "purple pipes" carry recycled water to use on lawns and for industries.	T	F

6. Pure Water San Diego has proven that San Diego can safely purify recycled water to make it drinkable.

5. Recycled water from the purple pipes is safe to drink.

- 7. A reservoir is a man-made lake or tank used for storing water.
- 8. The Pure Water Program uses a process that includes membrane filtration, reverse osmosis and ultraviolet disinfection to purify recycled water.
- 9. San Diego is the first place in the nation to use water purification technology.
- 10. If you drink tap water at Disneyland, you are most likely drinking purified water.

CROSSWORD PUZZLE-

Determine the word that best fits the clues and definitions provided.

FILL THE WORD IN THE CROSSWORD PUZZLE!

ACROSS

- **2.** _____ water. Wastewater that has undergone a high level of treatment at a reclamation facility so that it can be reused to water plants. This water is transported in purple pipes.
- **3.** Abbreviation for personal care products. Products that can be found in wastewater such as shampoos, fragrances, soap, and deodorant.
- 7. A man-made lake or tank used to collect and store water.
- **8.** Removing or destroying microorganisms in water that may be harmful to humans.
- 11. The process of removing chlorine that is added to pipelines for disinfection and pipe protection.
- **14.** Untreated water collected in the sewer system from homes and businesses (e.g., from bathtubs, showers, bathroom sinks, clothes washers, toilets, kitchen sinks, and dishwashers).
- **15.** A defined period of time when rainfall and runoff in a geographic area are much less than average
- **16.** A type of germ that the water purification process removes.

DOWN

1. _____filtration. A filtration process used to separate particles from the water. Pure Water San Diego uses microfiltration and ultrafiltration.

- _____ water. The water that the Pure Water Demonstration Facility produces. It starts as recycled water and is treated with ozonation, biological activated carbon filters, membrane filtration, reverse osmosis and ultraviolet disinfection/advanced oxidation.
- **4.** The process of removing salts and other minerals from seawater or brackish groundwater.
- Pure Water ______Facility. This test plant is examining the use of water purification technology to provide safe and reliable water for San Diego's future.
- **6.** _____water. Another name for "drinking water."
- **9.** A reduction in water waste. Saving water.
- 10. _____ water. A water source that begins in one region and is transferred to another region. For example, San Diego's water comes from Northern California or the Colorado River.
- **12.** Reverse ______ (RO). A high-pressure membrane filtration process that forces water through several sheets of thin plastic membranes to filter out minerals and contaminants. The RO membranes are like microscopic strainers.
- cycle. The movement of water as it evaporates from rivers, lakes or oceans, returns to the earth as precipitation, flows into rivers and evaporates again. This cycle is aided in urban areas by modern technology, which includes wastewater and drinking water treatment facilities.

UTILITY RELOCATION

A process that separates small particles from water by using a porous barrier to trap the particles and allow the water to pass through.

A long pipe, typically underground, for conveying oil, water, gas, etc. over long distances.

A type of excavation or depression in the ground that is generally deeper than it is wide, and narrow compared with its length.

The adjustment of a utility facility required by the program.

A manmade lake or tank used to collect and store water.

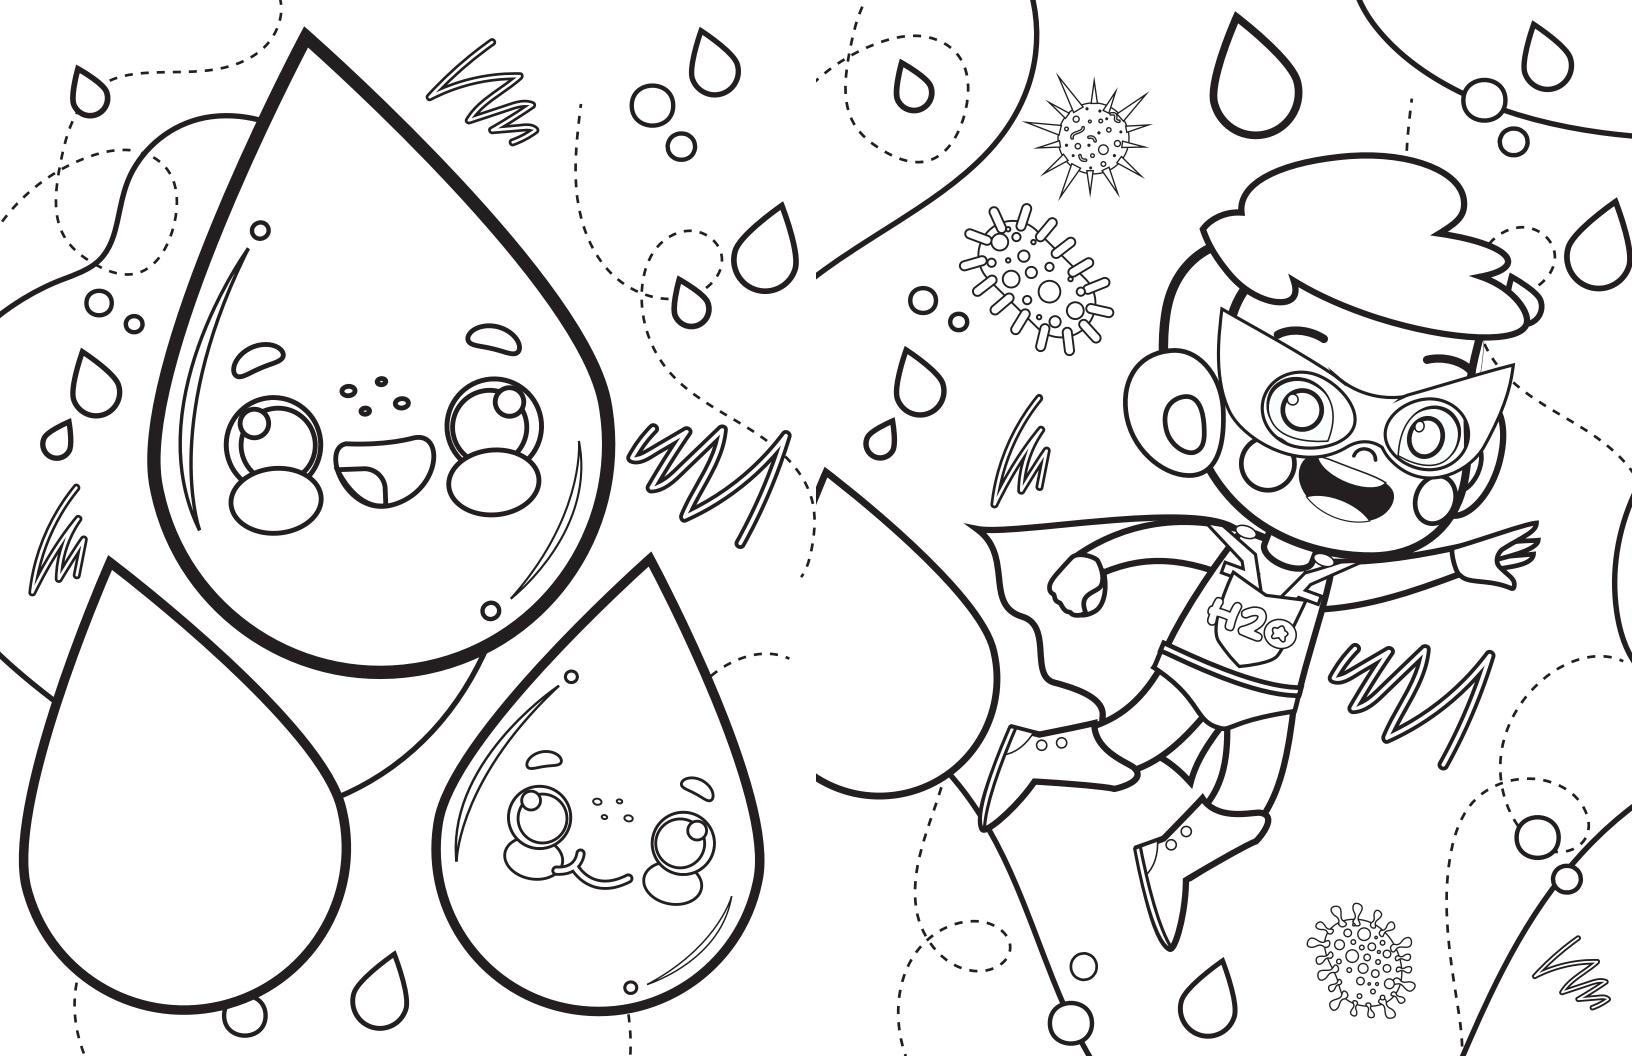

The dismantling, razing, destroying or wrecking of any building or structure or any part thereof.

A unit used to measure large volumes of water. It equals the volume of water required to cover one acre to a depth of one foot.

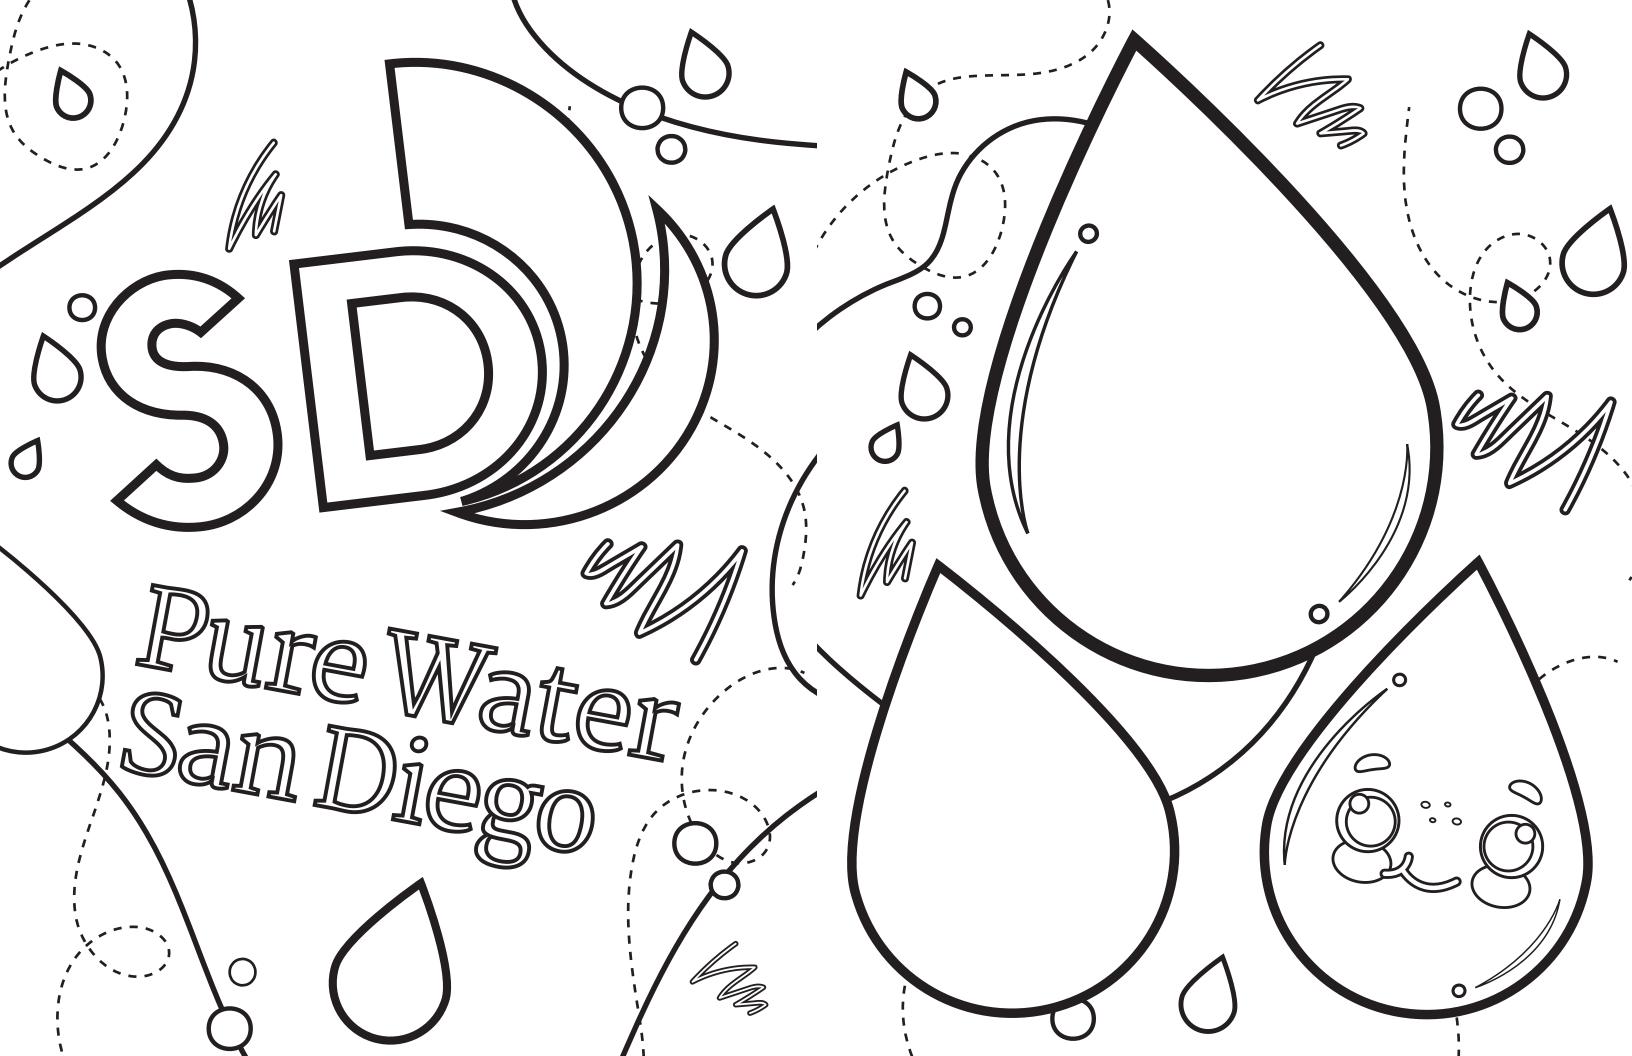

The process of removing salts and other minerals from seawater or brackish groundwater.

Water beneath the earth's surface that supplies wells and natural springs.

The practice of digging a test hole to expose underground utilities to ascertain the horizontal and vertical location of the facility.

The City of San Diego continues to provide safe, high quality drinking water for its customers each and every day.

Pure Water San Diego has been funded in part by grants from the U.S. Bureau of Reclamation and from Proposition 50 and 84 grants administered by the California Department of Water Resources.
