## INTRODUCTION

San Ysidro is located in southern San Diego County adjacent to the United States International Border with Tijuana, Mexico (figure 1). With the exception of a slightly hilly terrain along the eastern boundary, San Ysidro's approximate 1800 acre area is moderately level, encompassing much of the Tijuana River flood plain to the south and west. Cohesion of the community is fragmented by a trolley system and three major freeways, I-5, I-805, and State Route 117. This division has resulted in the physical fragmentation of the community into areas of different housing age, type and density. The core area, referred to as "El Pueblito Viejo" was selected by the R/UDAT (Regional/Urban Design Assistance Team) for historic evaluation. This area is characterized by older homes, a defined commercial area, narrow streets, and a linear park area containing a recreation center, library, meeting space and outdoor recreational facilities. With the introduction of low-income multi-unit rental housing much of the original historic character of this area has been compromised:

" . . . San Ysidro is a collage of many different images. To some San Diegans, San Ysidro is the City's 'stepchild', not connected to it either physically or socially. To others, it is a sleepy, dusty little border town, a low income Hispanic community with little political clout. . . . Perhaps the most significant and most damaging image of San Ysidro is that to many San Diegans, San Ysidro has no real image."

(San Ysidro Planning and Development Group- discussion given to the City of San Diego Planning Commission, December 8, 1988).

## SCOPE OF THE PROJECT

Over twenty years have elapsed since the initial community plan for San Ysidro was developed. This plan included guidelines from the Model Cities Planning program for addressing the physical, social and economic problems facing the community at that time. Over the ensuing decades, San Ysidro has grown and some positive changes have been put into effect. However, until 1987, its historic core had been all but forgotten. Since that date, the City of San Diego has been revising the San Ysidro Community Plan using relevant suggestions from community members and design assistance teams.

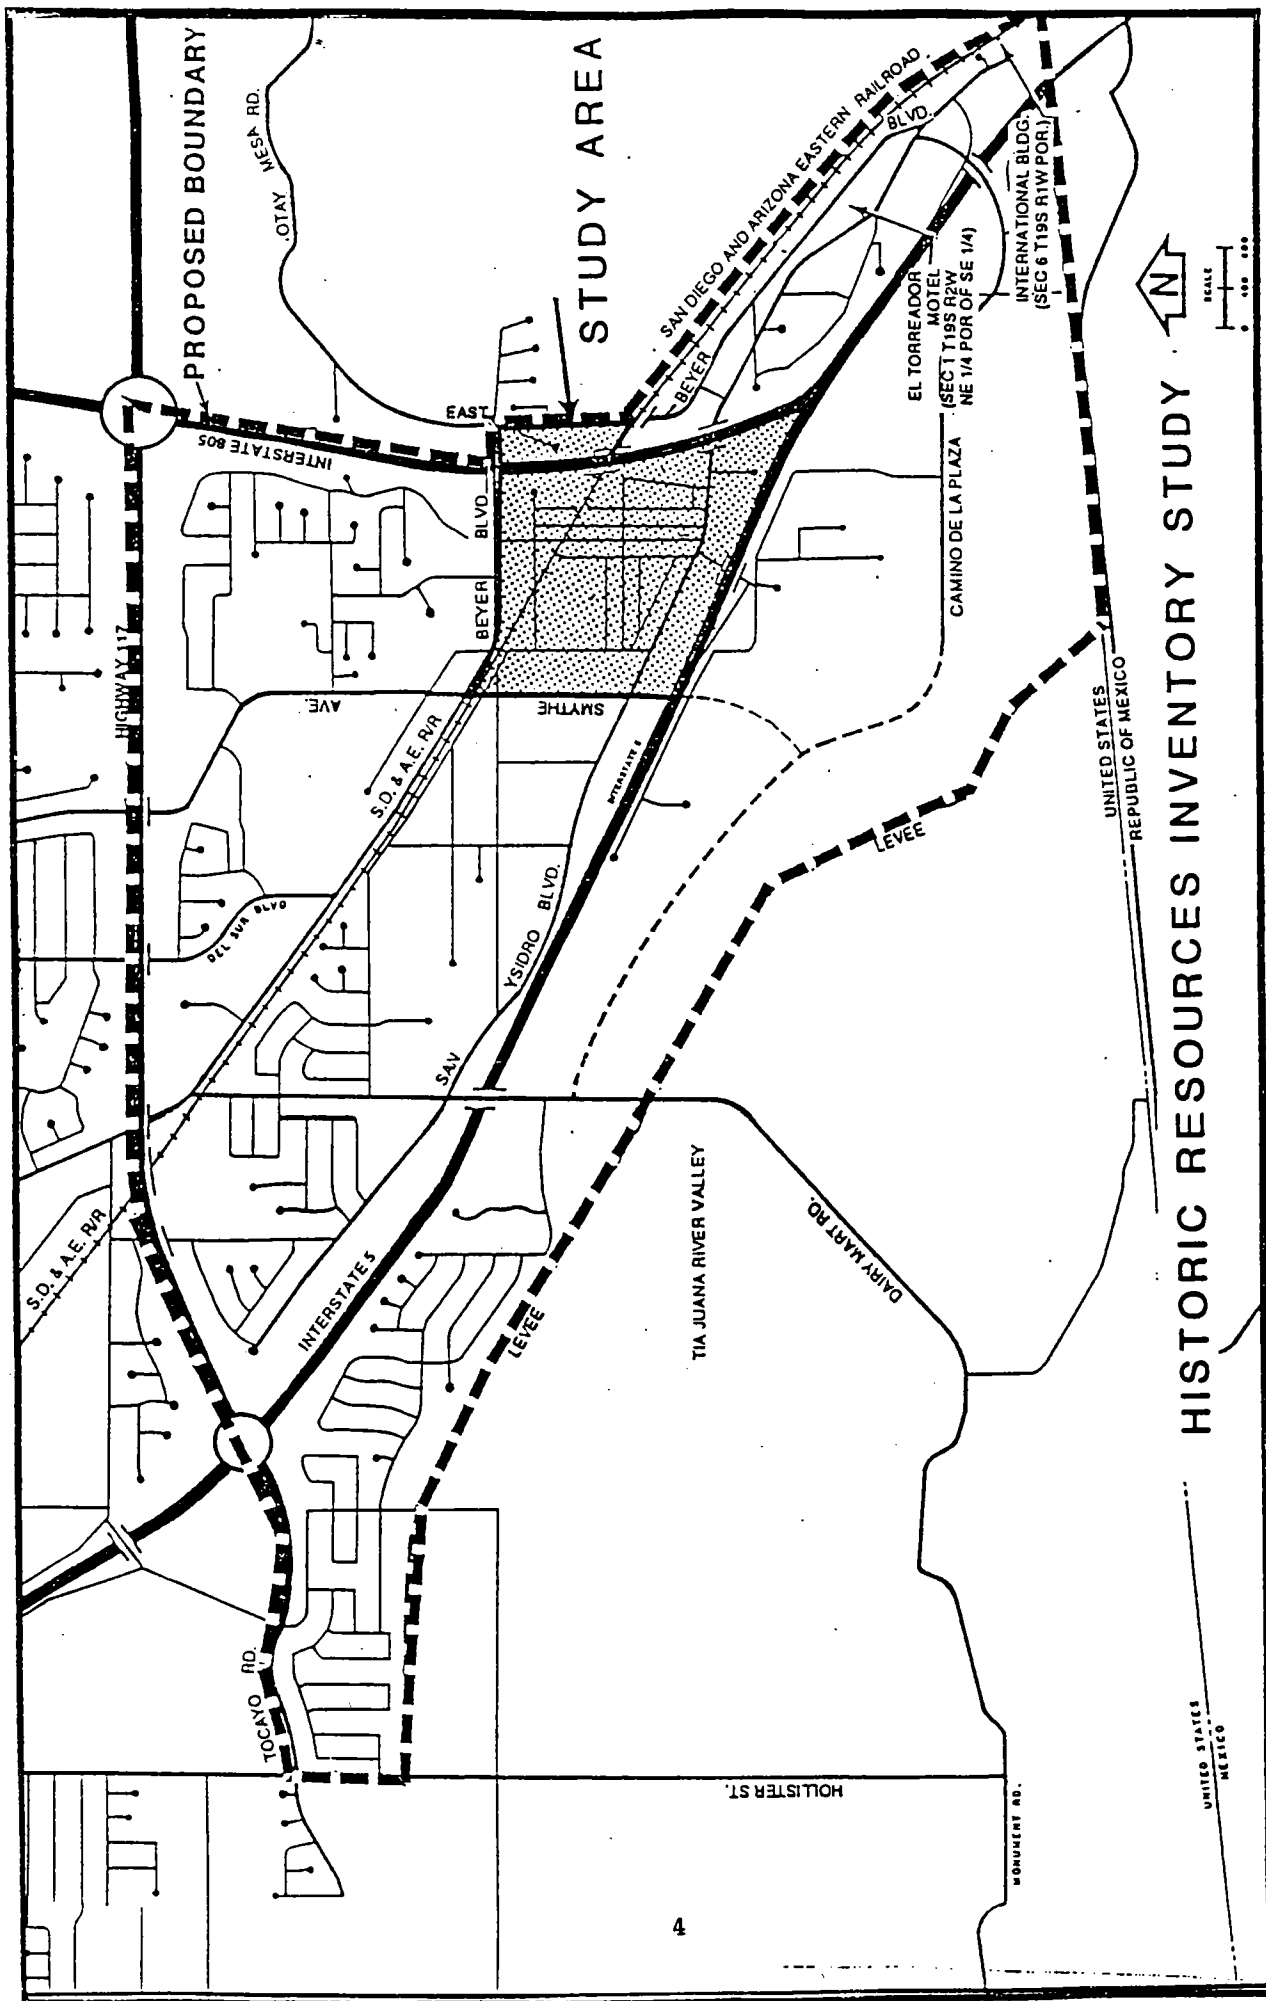

Based on recommendations presented in the 1987 R/UDAT report, the City of San Diego sought assistance from local environmental firms to conduct an historic survey of the area they refer to as "El Pueblito Viejo". Based on their experience with similar type projects, the firm of Roth and Associates was selected. Boundaries of the survey area extended to Beyer Blvd on the north, both sides of San Ysidro Blvd on the south, both sides of Smythe Ave on the west, and to East Beyer Blvd on the east (see project map, Figure 1). Although outside the core area, the El Toreador Motel and the "International" were also included in the study area. Tasks delineated by the City of San Diego Planning Department included:

- 1) Conduct a basic historic survey of approximately one hundred fifty (150) structures;
- 2) Prepare a comprehensive historical survey report for approximately twenty-five (25) of the structures selected by the City on the basis of either historic or architectural importance;
- 3) Prepare a historic narrative of the study;
- 4) Prepare base maps depicting location, architectural styles, building condition and eligibility to national, state or local historic designations (SHB Grades 1-4);

5) Prepare recommendations to preserve/protect the history and character of the area.

The report that follows documents the historic research, field methods and results used in determining the eligibility of the study for inclusion into either national, state or local historic registers. Further, recommendations are offered to protect the historic sense of neighborhood apparent within the study area. Funding for this project was through a Community Development Block Grant Funds (CDBG).

FIGURE 1

## CHRONOLOGY OF EVENTS

The chronology presented below serves to demonstrate that the San Ysidro study area has a rich and varied historical heritage. This outline, when combined with the significance overview presented in Section V, offers a perspective from which the local, state and national significance of this neighborhood is defined. The chronology focuses on events, personalities, and activities that contributed to the development of this neighborhood. The structures and landscape that remain serve to symbolically define the community's past and provide a sense of place and character.

### Chronology of Events

- 1542      September 28: Juan Rodriguez Cabrillo, a navigator sailing for Spain in the hopes of finding the Northern Strait and thereby a new route from the Pacific to Europe, set sail from Navidad, Mexico on June 27th, 1542. Three months later he discovered "a port, closed and very good which they named San Miguel" (San Diego) (Bolton 1976:23). The first day the crew landed near Ballast Point taking possession of Upper California in the name of Spain. This landing serves as the first documented coastal contact of Native Americans (Kumeyaay Indians) with Euro-Americans. The Kumeyaay (usually divided into two dialects, the "Ipai" and the "Tipai") practiced a village oriented subsistence pattern with a village chief chosen from various clan leaders.
- 1602      November 10: Sebastian Vizcaino, commanding a Spanish fleet of three vessels that was exploring the coast of California for a suitable port in which galleons traveling between the Philippines and Mexico could be supplied and repaired, landed "at a port, which must be the best to be found in all the South Seas, for, besides being protected on all sides and having good anchorage, it is in latitude 33 1/2 deg. It has very good wood and water, many fish of all kinds . . . . on land there is much game . . ." (Bolton 1976:80).
- 1769      April 11: In order to forestall Russian and British encroachment and give fringe protection to the well established Spanish Empire to the south, a decision to advance to the Port of Monterey was put into action, with a planned settlement (a presidio and a mission) in San Diego. (This has been called the "Sacred Expedition").

Franciscans given jurisdiction over the northern area of the California peninsula; Dominicans over the southern portion. The dividing line between these two jurisdictions was in the Tia Juana River Valley approximately where the US/Mexican border is.

Asistencia to Mission San Diego built. This was a branch of the Mission San Diego de Alcalá. It was built under the direction of Father Junipero Serra who established the chain of Franciscan missions that reached up the California coast to San Francisco. The Asistencia was destroyed by a flood from the Tia Juana River and never rebuilt. No exact location known.

1830s     The ranchos of La Punta, Jesus Maria, Las Palmas, Meliso, Ti Juan (sic) and San Isidro (sic) were granted during the Mexican period. All were near what would become the International Border in both Baja and US; none however, included the study area.

Ranchos south of San Diego subjected to numerous Indian uprisings. Ranchos were sacked and burned.

Possibility that adobe structure later used as stage station and meeting hall for Little Landers built during this era.

1848     Treat of Guadalupe Hidalgo established the Mexican/US border south of present day San Ysidro. The Boundary Commission was composed of 39 men directly involved with the survey, 150 army men for military protection and numerous other men including cooks, doctors, carpenters, draftsmen and interpreters. There was also a Mexican contingency with the group. Due to conflicting instructions and antagonistic personalities, especially between Cave Coutts and Lt. A. Whipple, other than establishing the two terminating points, little else was accomplished at this time.

By the mid 1860s, after the exact location of the border had been decided upon, temporary markers were erected at 258 locations across the 1200 mile expanse between Brownsville, Texas and San Diego, California.

The Mexican-California border remained unfenced until approximately 1910, at which time a barb wire fence with steel posts (approximately 3-5 strands of wire) was installed from the coast to as far as Otay Mountain.

- 1860s Squatters noted living in the area.
- 1871 Officers assigned to patrol US side of the border.
- 1873 First border customs building established on the Mexican side of the border.
- 1874 J. Platt listed as owner of the acreage that includes study area (no mention of structures).
- 1882 Portions of the study area owned by W.B. Spence and M. Dranga.
- 1885 The railroad arrived in San Diego from the north and opened up the area for "boom" development. The population of San Diego increased from its 1880 figure of 2,600 to a high of 40,000 in 1888. This later leveled off to about 16,000 in 1890.
- Real estate firm of Hart and Stern developed subdivision of Tia Juana City in the valley. Soon this settlement had drug store, saloon, hotel, custom house and bootshop.
- Tia Juana Heights subdivision begun.
- Local homesteads along railroad line in what would become San Ysidro.
- 1887 Area owned by J. Quinn.
- 1888 Portions of the area owned by Stern, others by Bowman.
- 1889 In Tia Juana and Tijuana (Mexican side of border) there were 21 buildings, a running spring and a cemetery. It was already a "tourist designation" with both American and Mexican investors seeking to make a profit from the new trade.
- 1891 Tia Juana City had 30-40 homes and business establishments.
- Flood of 1891 washed out at least 25 of the structures; town destroyed; those few who remained moved to higher ground.
- 1901 Land owned by George Belcher family; possible date of construction of their home (later converted into the San Ysidro Hotel).

FIGURE 2

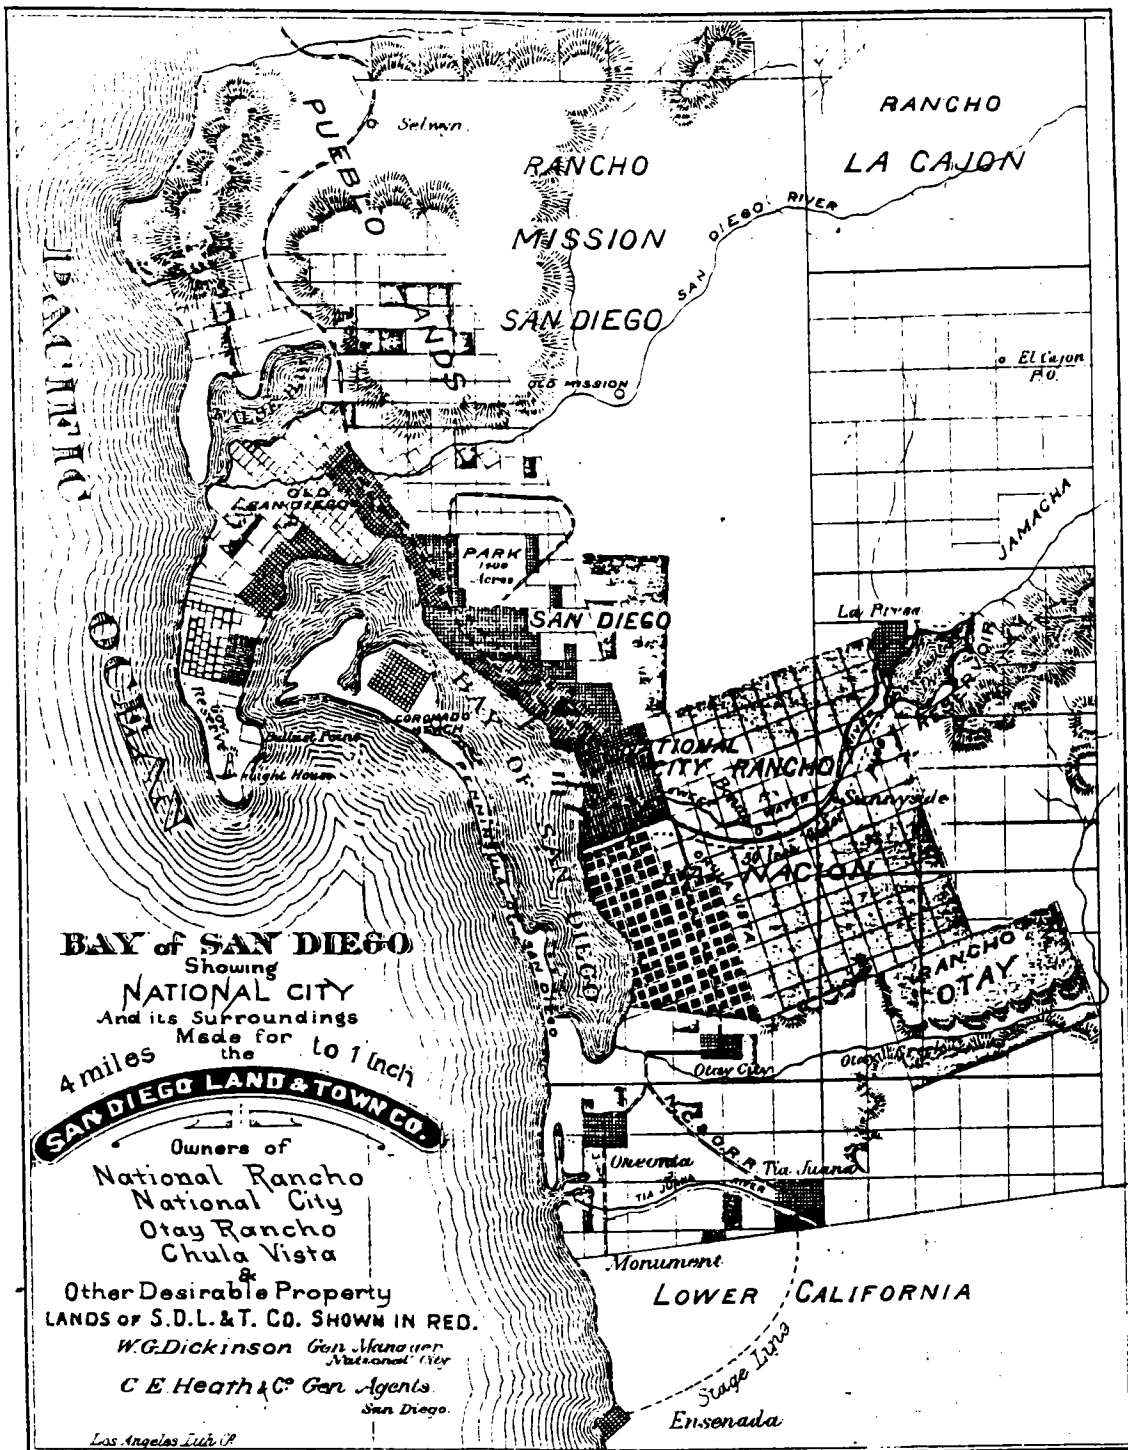

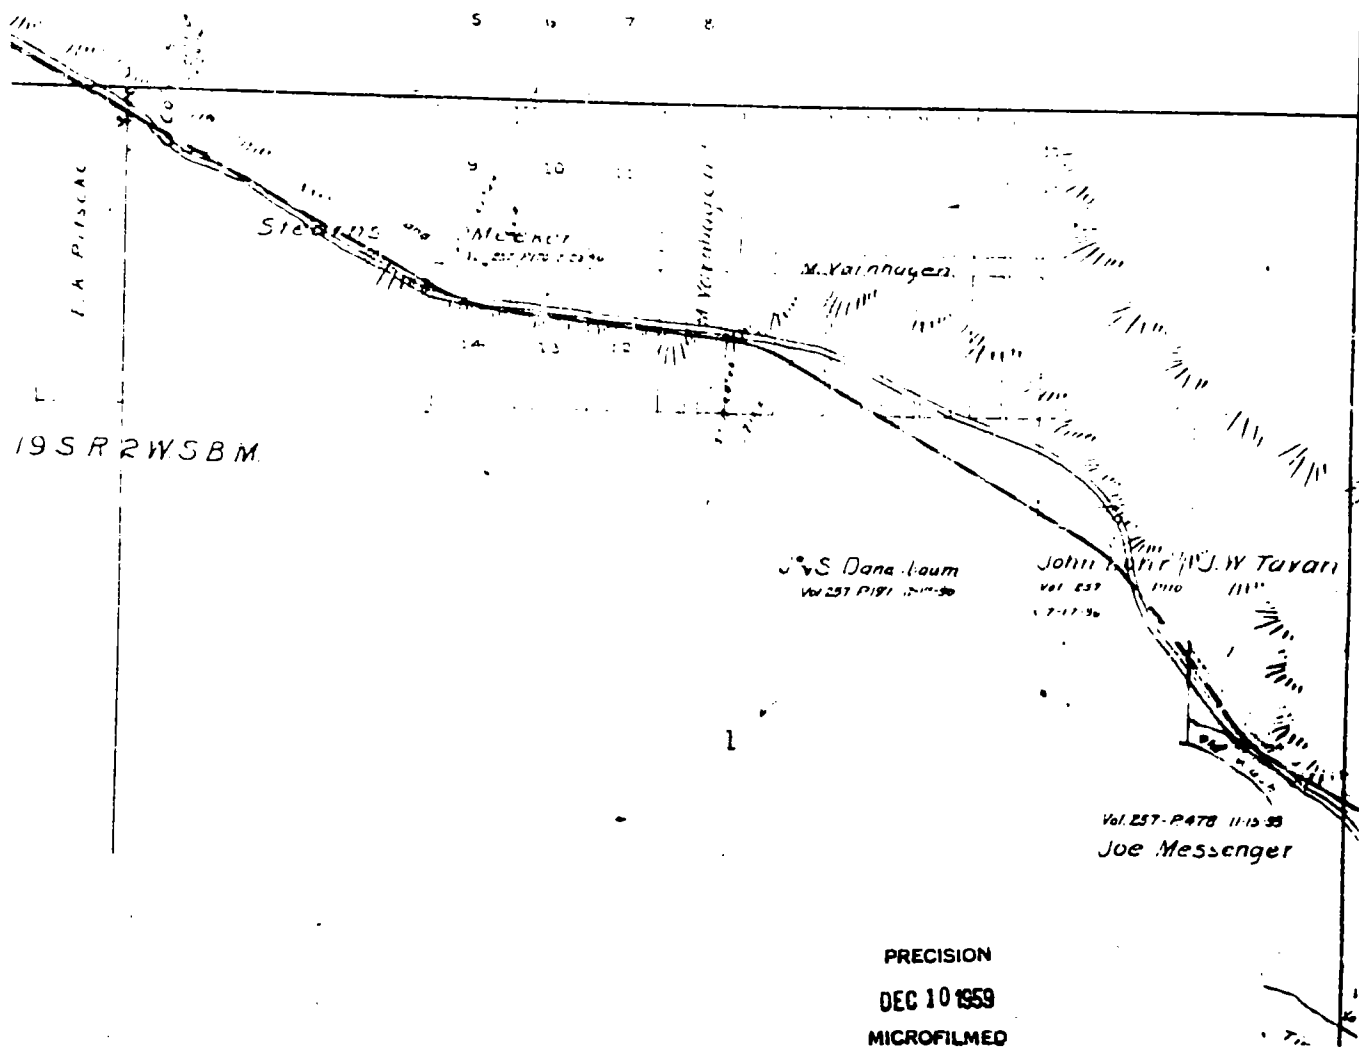

FIGURE 3

Tia Juana Road Survey #88 1895

- 1906 With promise of adequate water and rail connection to Imperial Valley, this date marks the beginning of a new population boom in San Diego. In 1900, the population was 19,000; by 1910, it was over 50,000. The growth was largely sparked by Spreckel's interests and concentrated, promotional land speculation.
- 1907 Thousands of tourists and colonists arriving in San Diego take advantage of the cheap train fares to Southern California.
- 1908 Formal incorporation of the Little Landers Corporation. Symbolic of the colonizing activities of William E. Smythe, journalist, public speaker, organizer, writer, land speculator and national reclamation proponent. (A street within the study area retains his name). The San Ysidro colonial venture was initially prompted by a chamber of commerce promotional impulse to divert movement of midwestern immigrants from Los Angeles to San Diego and give them a livelihood on San Diego soil. The settlement, a dream of agrarian utopia was associated with the early 20th century back to the land movements; a response to the industrial revolution that promised a release from the pressures of urban living for even those of limited means. This response was seen in all aspects of life (architecture, writing, health, awareness, environmental awareness, etc.).
- Smythe and George P. Hall, a former agricultural commissioner for San Diego, selected the site of the Belcher Ranch as the location of the Little Landers Colony #1. The Belcher home was converted into the San Ysidro Inn.
- 1908 Holdings of the Little Landers Corporation expanded to 550 acres (150 acres in the valley floor).
- Little Landers headquarters in the "old adobe building".
- Initially, settlers were required to purchase a town lot and an agricultural plot (1 acre) in the valley.
- 1909 June 11th- Grand Opening: streets, parks and lots marked out. J.W. Lewis appointed contractor and general manager of the settlement. Lots sold for \$250 (50' x 120'); acres, depending of location from \$350-\$550.
- Within a few weeks, 20 families were living in the colony. One of the first homes built was for Harold Champ: a frame cottage with porch and cobblestone chimney.

Settlement receiving national press coverage.

- 1910 Only 38 families of the original 100 buyers are living in the colony. Many of the original buyers were speculators and did not build. Problems with money, lack of adequate irrigation and agricultural experience, arguments over "communal" marketing caused friction. Corporation went bankrupt.
- December- new corporation founded. Bylaws excluded Blacks, Orientals and Mexicans from settling in the community. New law allowed settlers to purchase only a town lot or an agricultural plot if they desired. This action was the first step away from the original agrarian ideal.
- Push to establish the San Ysidro Water District. Need to increase population. New approach taken.
- Between 1908-1911, the first years the Little Landers were attempting to make a successful agricultural community, San Diego was in the midst of the worst drought in decades.
- 1911 69 families living in the community.
- George Hall contributed land for park and landscaped it.
- 1911 Magonistas capture Tijuana. 100 people, mostly American and Mexican merchants across the border fled to San Ysidro. Americans gathered at border to watch "Battle of Tijuana" which lasted 16 hours and resulted in 32 dead and 24 wounded. A tent camp was established for those who fled. Some of the refugees bought town lots and remained in the city.
- 1912 47 new homes built; 116 families or approximately 300 people were now living in San Ysidro.
- 1913 Plan to upgrade community by replacing Redwood Hall with a community center/school was proposed. Much press regarding makeup of community, now consisting of many doctors, lawyers and teachers. The development of a varied cultural and social life stressed. By this time, invalid and elderly were over-represented in the population. Early settlers include: Smythe, Belcher, J. Lewis, H. Champ, McClintock, J. Gottech, G. Hall, J. Poeton, Bawden, Mills, Campbell, E. Hosmer, G. Young, L. Scott and P. Sanger.
- 1914 Little Landers Social Survey of San Ysidro, California: The Mother Colony published to encourage settlement.

COURTESY SDHS

- 1915      500 residents living in San Ysidro
- 600 military men encamped at San Ysidro at what is now the Pan American Apartments.
- Racing was voted out in California, resulting in a growth of the tourist industry in Tijuana. The railroad increased its trips to the area to three and four a day to carry pleasure-seekers from San Diego to Tijuana.
- 1916      January- Flood: 100 families lost homes in the bottom lands; refugee camp set up. Little Landers community never recovered. This came in the wake of financial hard times for the community and precipitated the sale of some of the land to non-participants in the experiment. Many of these sales were to U.S. citizens who worked at the racetrack and night clubs in Tijuana. The opening in Baja of James Coffroth's Jockey Club Race Track, in particular, brought an influx of residents, many of his 300 employees lived in San Ysidro.
- 1919      San Diego and Arizona Railroad to Tijuana completed.
- 1917-1919      World War I, the shortage of American labor, a flu epidemic and a general shortage of supplies had an effect on the nation as a whole. San Ysidro, as a border town was impacted by a steady increase in immigration populations.
- 1920-1933      Prohibition in the U.S., Tijuana became an even larger tourist attraction. The economy of the area expanded and diversified as the result of the increased activities of the casinos and nightclubs in Tijuana.
- 1920      New lands taken up for poultry raising.
- 1922      20 new homes built. This decade marked the loss of the agrarian character of the community. Gambling enterprises south of the border increased the housing demand in San Ysidro. By this time the homestead ideal and back-to-the-land ideals had been replaced in the American psyche. The community focus gradually changed to cater to the tourist and commercial needs of an increasing resident population.
- 1924      San Ysidro Community Church designed and built by Louis Gill.
- San Ysidro Library built from donations by Frank Beyers.
- 1925      A bank was opened in San Ysidro to provide a legitimate means to transfer the money made in Tijuana to banks in Los Angeles and other cities.

SAN YSIDRO PARK AND RESIDENTIAL SECTION CIRCA 1912

A SAN YSIDRO RESIDENCE CIRCA 1912

COURTESY SDHS

- 1927      Our Lady of Mt. Carmel Catholic Church built by contractor W.B. Settle.
- Commercial building designed and built on San Ysidro Blvd by Louis Gill.
- Floods again destroyed bottom lands throughout the county, cutting off communities.
- 1926      Frank Beyers donated a civic center in San Ysidro. The community was predominantly Anglo-American at this time.
- 1933      Nationalization of all foreign-owned properties in Mexico. This action severely affected hundreds of Americans who had invested heavily in Tijuana. The economy of San Ysidro suffered as well.
- 1942      Beginning of the Bracero program. This program coincided with the end of World War II, thus the increased Mexican population in San Ysidro and other border towns contributed to a housing shortage for young men returning home from the service. The Bracero program represented an informal agreement between the U.S. and Mexican governments, allowing seasonal importation of workers to help with American harvests.
- early 1950s      Mexico passed new laws restricting the employment of Americans in Mexico. At the same time Tijuana began a period of rapid population growth. These two factors changed the composition of the town so that by 1960 a majority of the residents were Mexican nationals or Mexican Americans.
- During this period the border crossing at Tijuana became the busiest between the U.S. and another country, surpassing the crossing between Detroit and Toronto.
- San Ysidro residents began to question the town's abilities to provide basic municipal services. Community leaders approached the City of San Diego about annexation, primarily, to meet the increased demand for water.
- 1953      San Ysidro Blvd became a six-lane highway; road widenings emphasize the importance of the cross-border traffic.
- 1957      The City of San Diego annexed San Ysidro after a vote by the residents. There was opposition to this in the town. Those in favor of annexation regarded it as necessary to obtain water and other urban services for the town.

INTERNATIONAL BORDER 1920's

FIGURE 12

Peak year of the Bracero Program. 192,000 workers were brought into the U.S. It is estimated that over 8% remained in San Diego, many in San Ysidro.

- 1963 City of San Diego begins to prepare a development plan for all of South San Diego; at that time San Ysidro was the core of the South San Diego area. The plan, which was prepared in conjunction with an economic study, was presented to the City Council in 1965. The "San Diego Border Area Plan", continued to forecast San Ysidro as the core of South San Diego.
- 1967 In the mid 1960s, San Diego began a decentralized planning program and divided the City into numerous community planning areas; in 1967, the City Council recognized the San Ysidro Planning and Development Group as the citizen planning committee that would work with the City Planning Department in preparing a community plan for San Ysidro.
- Traffic was diverted from San Ysidro Blvd to Interstate 5; San Ysidro Blvd no longer serves as an international highway. Beyer Road still carries traffic to the border.
- 1968 San Diego applied for and received a Model Cities planning grant from the Federal Department of Housing and Urban Development. San Ysidro was designated as part of the Model Neighborhood, and guidelines for the Model Cities Planning Program addressing physical, economic and social problems were incorporated into the San Ysidro Community Plan adopted by the City Council in 1974. The community planning area included approximately 1600 acres south of then State Highway 1717 (now I-905), west of I-805, north of Mexico and east of the Tijuana River. The plan proposed a community that would, at buildout, contain a population of approximately 22,500.
- 1973 San Ysidro residents considered deannexation from the City of San Diego; some believed that the community had an adequate tax base to provide its own services. The attempt failed.
- 1974 San Ysidro Community Plan adopted by the City of San Diego.
- 1975 Street system of the town disrupted by the placement of Interstate 805- a large portion of the older residential and commercial areas of the town were removed. Disruption occurred at the break between the original Little Landers

subdivision and a later subdivision. But the freeway took out more than an edge, it created a total break in the street fabric.

- 1976 Devaluation of the peso. The first devaluation led to a drop in the percentage of business done with Mexican nationals, hurting the retail stores in San Ysidro.
- 1977 As part of the community's continuing efforts to retain a separate identity, community members met with representatives of the U.S. Postal Service to protest the possible loss of San Ysidro's separate zip code.
- 1980s Rapid development of low-income multi-family housing placed strain on the community's facilities and services. Increase in this type of housing brought about a change in the community character- for the most part apartment projects did not blend in or fit with the development that surrounded them.
- 1981 San Diego Trolley completed. With this development it was expected that new tourism would come to the town.
- 1982 Further devaluation of the peso. This led to a decrease in the amount spent in San Ysidro by Mexican Nationals. Many businesses were changed from retail outlets to money exchange houses.
- 1987 March- the American Institute of Architects and City-County Reinvestment Task Force conducted a Regional/Urban Design Assistance Team (R/UDAT) project in San Ysidro.
- December- based on the R/UDAT recommendations, City of San Diego Planning Department began the community plan revision process.
- 1988 San Ysidro has become the world's busiest border station. It is the port of entry and temporary place of residence for Mexican immigrants. Over half of the population in San Ysidro are of Mexican descent. A community begun in the early decades of the 20th century as a Euro-American agrarian colony has changed into a multi-ethnic city with a commercial as well as a residential component (see attached vicinity maps and USGS maps).

## METHODOLOGY

The primary objective of the San Ysidro Historic Survey was the identification, designation, and preservation of historic and architecturally significant properties within the study area as well as the retention of neighborhood character in the older portion of this community (City of San Diego 1988:1). To adequately assess the study area according to the criteria for evaluation outlined in 36CFR 60 Section 60.6, both field reconnaissance and in-depth research were conducted. Published procedural guidelines for the identification, registration and treatments of cultural resources were carefully followed. These included: How to Apply the National Register Criteria for Evaluation (1982), "Archaeology and Historic Preservation: Secretary of the Interior Standards and Guidelines" (Federal Register September 1983, 36 CFR Part 60-64, 800 and 1210, Appendix b) and "California Historic Resources Inventory Survey Workbook" (1982).

The boundaries of the study area were initially clarified during a tour of the community with Corey Braun of the City of San Diego Planning Department (figure 1). During the on-foot, block by block field portion of the investigation, each structure that appeared to meet the 50 year criteria or was potentially a unique resource was photographed and described. Both color slides and black and white film were used. All structures were photographed from the front. In some cases, where access was possible, side and rear views were taken as well. Prior to field work, a form was created by the consultants that enabled a consistent and thorough description of each structure (figure 2). This form was developed based on attributes of style, form, structure and design elements discussed in McAlester (1984), Blumenson (1981) and The Architectural Supplement to Historical Resources Inventory (State of California Historic Resources Manual). In the field, a form was completed for each structure. Slides were taken so that finished descriptions could

be compared to the actual building and a full and accurate verbal picture would be created on the finished forms. Over the several weeks that were spent in the field many local residents informally talked with the surveyors, supplying information on dates of construction and community lore.

Throughout the course of the investigation primary and secondary archival research and resident interviews were conducted. Over 320 person hours were involved in this phase of the project. For the most part, this research resulted in acquiring little in the way of substantiated site and person-specific information. Major gaps exist in the documentation of San Ysidro's community evolution. As ordinary middle-class and blue collar workers, the majority of San Ysidro inhabitants often left little or no information in the available records.

Over the course of the investigation, Roth and Associates gave two presentations of work in progress. The first was given on February 9, 1989 at the San Ysidro Planning Group Meeting. The second was given in April of 1989 during the R/UDAT revisit to San Ysidro. In both cases, these presentations resulted in community input. Formal interviews were conducted either over the phone or in person. Attempts were made to contact all owners of properties thought to be over 50 years old. One of the interviews was conducted with four long time residents. Photographs and the preliminary forms were viewed by the informants and they were asked about their knowledge of either the building or its occupants. Unfortunately, they offered little in the way of site specific background.

This lack of data is compounded by the paucity of information found in the primary sources. Tax assessors records, extremely useful in understanding construction and addition phases to a property are available. However, they are housed in an area with no public access. Searches are conducted by County personnel and it generally takes one to three months per property to obtain the needed information. Utility records (sewers, water, gas and electric) are incomplete. Sewer records in the County are only kept from 1948 when sanitation districts were

developed; building permits are not kept prior to 1973; San Diego Gas and Electric (SDG&E) saves data for only the past two years; and the San Ysidro Irrigation District files, though available, are not organized in a timely fashion. Further, Directories for San Ysidro do not include street addresses until the 1950s; Sanborn maps of the city are lacking, deeds are often incomplete and difficult to trace for this area; and much of the early newspaper articles regarding the Little Landers community are dramatic, flowery exposes filled with real estate boosterism; exaggeration being the norm.

Aerial photographs and maps were compiled in an effort to understand the settlement patterns of this neighborhood before 1938. Comparison of 1928 and 1929 aeriels with a 1954 photograph assisted in separating post World War II in-filling within the study area from potentially older buildings. In addition to the review of these aeriels, historical photographs in the archives of the local historic societies and privately held pictures were analyzed as well. To identify potential early settlement owners, the following maps were reviewed: (Note- all maps except the 1909 Little Landers map are on file at the San Diego County Department of Planning and Land Use, Maps and Record Sections. The Little Landers Map is on file at the San Diego History Society (SDHS) Research archives)

nd	Record of Survey Map #9158, San Ysidro Blvd (Sheet 9/9)

It was not within the scope of work to complete individual chains of title for each of the lots under study. This information, even if completed does not necessarily provide definitive dates of construction. Deed records were researched however from 1909 to 1916 to document the first purchase dates of specific Little Lander parcels. (These data are presented on the Little Landers Subdivision Map; they suggest ownership not necessarily construction dates). Pre-1909 ownership of the original Belcher farm was also traced as well.

In an effort to develop both property specific histories and an overview of San Ysidro as a neighborhood, the following institutions and persons were consulted:

San Diego City Staff reviewed the initial 128 forms and selected specific structures for additional significance study. The overall lack of data for this area of San Diego, however, resulted in compiling little or no social history for many of the chosen buildings. Where data are available they are presented within the individual evaluations. A detailed significance overview was developed that focuses on the entire neighborhood rather than isolated buildings.

### COMMENTS

## FIELD RESULTS

During the course of the historic survey, one hundred twenty-eight (128) structures were evaluated as potentially historic structures (see attached Historic Inventory Sheets). The inventory process was both lengthy and time consuming. Inclusion was based on recognized architectural styles, the presence/absence of older vegetation, position on the lot, informant information, and analysis of historic photographs depicting the neighborhood. The one hundred twenty-eight structures recorded represent seven different building uses: 2 churches, 1 library, 1 motel, 1 auto-court, 2 hotels, 13 commercial establishments and 108 residences. After initial review, 27 of these were selected by San Diego City Staff for significance study.

There is no ideal typology for identifying house types. The researchers attempted to select those features of the structure that seem most distinctive (i.e. floor plan, height and roof profile). However, as Rapoport writes:

"buildings, as all human endeavors, obey varied and often contradictory and conflicting impulses which interfere with the simple and orderly diagrams, models and classifications we love to construct. The complexities of man and his history cannot be encompassed in neat formulas, although the desire to do so characterizes our age"  
(Rapoport 1969:11).

Between 1890 and 1930, American building types became so fragmented that in the majority of cases, styles cannot "be identified by one or two dominant features (here a pointed window, there a pinnacle, and its Gothic Revival; here a round arch, there a bracket, and its Italiante . . . . mansards make it Second Empire. . . ."(Gowans 1987:xiv). As a rule, the homes of the general population, unlike architect-designed houses, did not select decorative elements from a single stylistic

format. The Field Guide to American Houses was used extensively during this investigation to classify the evaluated structures. However, the authors must agree with the criticism of this work expressed by Jakles, Bastian and Meyer: "rather than recognizing basic forms and vernacular origins, the two McAlesters persist in seeing style even where there is little or no style to see" (Jakles et. al. 1989:5).

All the residences within the study area are "common" or "comfortable" homes: small, single-family sized bungalows that offered personal independence for the ordinary person. Evolving at the turn of the century as a result of increased demand for suburban development, the bungalow combined modern conveniences, low maintenance, and ease and economy of construction. Individuality was expressed in the myriad of house choices offered in the dozens of mail-order catalogs. Each catalog company dealt with the population's desire for individual, self-contained space in different ways. As a rule, these homes followed no precise architectural formulas and consequently are of no specific, definable style. They were neither designed by architects nor constructed by licensed contractors. In San Ysidro, Elmer and Herbert Youmans, C.J. Young and J.W. Lewis, all non-architects, assisted in the construction of many of the extant structures. Since most of the builders were not professionals in the field, individual homes varied depending on material availability, the carpenter's skill and the available monies and personal domestic needs of the individual home owner.

"Houses are significant in so far as they reveal the living conditions of a period and the capacity of the people who occupied them. They are a record of human society and of the peculiar genius of a given community".

(Helen Reynolds in Jakle et. al. 1989:1)

Based on the definitions presented in Gowans (1987), Blumenson (1981), Harris (1975), Jakle (1989), Longstreet (1987), and various articles found within the Old House Journal (1981-1989), three different

types of bungalow housing were distinguished within the study area: those with accepted craftsman elements; those with Spanish eclectic elements; and vernacular. This catch-all term refers to those homes with simple form, straight lines and a general lack of stylistically distinctive design elements. In addition, two other styles, Art Deco and Mission Revival were used for three non-residential structures. The totals are as follows:

Spanish Eclectic with flat roofs (22), Spanish Eclectic with multiple rooflines (9), Mission Revival (2), craftsman (20), vernacular (74), and art deco (1). Individual style breakdowns as to condition and grade are as follows:

SPANISH ECLECTIC with flat roof (22)

<u>Condition</u>		<u>Site Board Grade</u>	
Excellent	1	Grade 1	1
Good	0	Grade 2	1
Fair	19	Grade 3	4
Deteriorated	2	Grade 4	16

SPANISH ECLECTIC with multi rooflines (9)

<u>Condition</u>		<u>Site Board Grade</u>	
Excellent	1	Grade 1	0
Good	4	Grade 2	0
Fair	4	Grade 3	1
Deteriorated	0	Grade 4	8

MISSION REVIVAL (2)

<u>Condition</u>		<u>Site Board Grade</u>	
Excellent	0	Grade 1	1
Good	2	Grade 2	0
Fair	0	Grade 3	1
Deteriorated	0	Grade 4	0

ART DECO (1)

<u>Condition</u>		<u>Site Board Grade</u>	
Excellent	0	Grade 1	0
Good	0	Grade 2	1
Fair	1	Grade 3	0
Deteriorate	0	Grade 4	0

CRAFTSMAN (20)

<u>Condition</u>		<u>Site Board Grade</u>	
Excellent	1	Grade 1	1
Good	7	Grade 2	0
Fair	9	Grade 3	11
Deteriorated	3	Grade 4	7

VERNACULAR (74)

<u>Condition</u>		<u>Site Board Grade</u>	
Excellent	0	Grade 1	1
Good	13	Grade 2	0
Fair	37	Grade 3	7
Deteriorated	24	Grade 4	66

Although "condition" does not alter either the architectural or historical significance of a particular style, it is often used in determining the potential for restoration, rehabilitation or remodeling. Four arbitrary levels of condition were used in this study: "excellent",

"good", "fair", and "deteriorated". What could be considered "good" in a middle or lower class neighborhood could be considered "fair" or "deteriorated" in an upper middle-class area. There is no consistent or concise way of measuring condition without an examination of the structural integrity of each house. San Ysidro is reflective of a middle and blue collar working class that often has little time or resources to rehab or maintain older houses that are small, were cheaply constructed and are in need of constant repair.

It is important to note that all evaluations made for this study were based on exterior facades, and in many cases only the front facade. Most, if not all, of the exterior conditions grade into adjoining categories. (i.e. Some buildings have a good front facade but the rear of the structure is rapidly deteriorating. Some buildings have new stucco with associated rotted or unreplaced wood elements; other buildings appear to have a good exterior but the residents report that the house "is ready to fall down"). The listing shown in the following breakdowns for each house represents a blending rather than mutually exclusive categories. For the most part, "fair" and "good" could be interchanged, while "excellent" and "deteriorated" represent the two extremes. The overall results for each structure evaluated for condition are as follows: 3 were rated "excellent", 26 as "good", 70 as "fair" and 29 as "deteriorated".

When studied as individual, isolated buildings, the majority of the structures within the study area do not qualify for federal, state or local historic designation. These homes, generally of no distinctive , textbooks style, were dwellings of middle-class and blue collar workers who left little or no record in the local annals. The structures are neither architecturally nor historically unique. Although often in poor or deteriorated condition, the homes selected as of possible local importance were chosen because they were either good examples of the small, single-family home built in the early decades of the 20th century or they are known to have been built or lived in by early inhabitants of this community.

A breakdown by Historic Site Board Grade can be summarized as Grade #1- 4 structures, Grade #2- 2 structures, Grade #3- 24 structures and Grade #4- 98 structures: (see Table 1 for evaluation of all 128 structures)

POTENTIAL NATIONAL REGISTER SIGNIFICANCE (HSB Grade 1)

In assessing the potential significance of the proposed San Ysidro Historic District, the area must be viewed as a single, cohesive entity. The core area was initially designed to function as a neighborhood and although cultural make-up and density has changed, this area still reflects the original intent of providing a sense of place to its citizens. This sense of belonging was best described by Mrs. Nora Youmans: "at the time (1926) it was a community, not just a place to drive through . . . . there was no better place to raise a family".

## SIGNIFICANCE STATEMENT

(NOTE: This significance statement is duplicated within the Appendix and referred to within individual resource sheets; the statement was duplicated in the event that the appendix and the main body of the report became separated during the review process).

Under accepted criteria, few of the individual structures within the study area qualify for federal, state, or local historic designation. Throughout its history, San Ysidro has been the home to few individuals who would qualify as persons important in history. As ordinary middle-class and blue collar workers, the majority of San Ysidro inhabitants often left little or no record in the local annals. Even the local residents interviewed during the course of the investigation offered little in the way of site specific background. This lack of data is compounded by the paucity of information found in the primary sources. Directories for San Ysidro do not include street addresses until the late 1950s; Sanborn maps are lacking; deeds are often incomplete and impossible to trace back to original ownership; irrigation and sewer records are incomplete; and local archives contain only fragments of lore that often lack references. Since it was not part of the scope of work, complete individual chain of titles were not compiled. This information, even if completed, does not necessarily provide a date of construction. The overall lack of data for this area resulted in compiling little or no social history for many of the structures selected by the city for additional study.

The concept of historic preservation, however, has grown beyond the confines of mere architecture to include the landscape itself:

The single building is but an element in a complex civic or landscape design. Except in the abstraction of drawing or photography, no building exists in a void: it functions as a part of a greater whole and can be seen and felt only through dynamic participation in that whole.  
(Mumford 1955:ix).

In assessing the potential significance of the proposed San Ysidro historic district, it is imperative that the study area be viewed beyond the mere architectural descriptions of individual structures coupled with sketchy biographical data of earlier inhabitants. This area is more than simply isolated "old houses" that retain certain stylistic elements reflective of an earlier period of San Diego's suburban history. This historical environment is rather the sum of the buildings, and its landscape. The spatial relationship of various buildings to each other, the pattern of the streets and roads, the location of major services and the chosen styles for individual homes combine to reflect both the ideals of the original founders of the colony and the visually apparent transformation of the community and its support institutions. Even as it moved away from its basic agrarian character, the original planned community of San Ysidro had the capacity to absorb change while at the same time retain its historical landscape (see attached 1928 and 1954 historic aerial photographs and the Little Landers site map). These figures visually depict the continuity of the neighborhood plan within the historic survey area. If the area is to be nominated as a local, state or national district, its significance lies in suburban planning rather than in the importance of individual houses or subjective aesthetic values. Unlike other planned communities in the San Diego area such as Rancho Santa Fe where an environment based on picturesque principles was created or districts that contain distinctive, uncompromised architecture such as Balboa Park and Golden Hills, the homes in San Ysidro are as a rule small and of no specific textbook style; no two are the same and most are in fair to poor condition. As a neighborhood, however, cohesion is evident.

In January of 1909, the Little Landers Colony #1 was formally incorporated (A detailed article regarding the Little Landers development was written by Lee (1975). Unless otherwise noted, information regarding the Little Landers was extracted from that source). Five hundred and fifty acres of land had been purchased, with streets, parks, town lots and acre plots marked out for prospective colonists. Prior to 1909, the area surrounding what was to

become San Ysidro, had been the site of farms layed out like a ribbon along the main artery of transportation between San Diego and Baja California. The subdivision of "Tia Juana" had been developed by the real estate firm of Hart and Stern in the valley area south and west nearer the international border. This small, rural community was destroyed by a flood in 1891 and never fully recovered.

William Smythe, a successful back-to-the-land colonizer and George Hall, former chairman of the California State Board of Horticulture, selected the site of the Belcher Ranch in the Tia Juana River Valley as the location for their settlement. As was typical of the suburban development genre that had evolved throughout the United States since the 1820s, the site was selected not only because of its fertile soil and available water, but also because of its access to a city. Since the 1820s, reformers had attempted to combine what was perceived as the best qualities of city and country: modern city conveniences melded with country ambiance. This movement, professing the borderland good life, had by the 1880s built into "a flood of articles, books, and even poetry that nearly overwhelmed publishers in the 1890s and succeeding decades". This literature mirrored and shaped turn of the century middle-class thinking (Stilgoe 1988:168). The 1906 San Francisco earthquake with "the toppling of towers and bridges quickly became a metaphor for the collapse of social and economic order, the end of traditional virtue" (Stilgoe 1988:280). Capitalizing on the fear and insecurities felt by much of the middle class, reformers such as Smythe offered an answer for economic and cultural security: "A little land and a living"; it was perceived by many "that it is the family on the acre of land which improves the national character" (Little Landers advertising, n.d.). The progressive literature glorified the single family home as the proper atmosphere to cement family ties and elevate community spirit. Combined with the preoccupation with health, fresh air and a general move away from the plight of urban industrial cities, many designs for community living had evolved.

In San Ysidro, lots were large enough for gardening yet aligned on streets to avoid the dangers associated with rural isolation. Community life was centered in Redwood Hall, where town meetings, church services, the library and classes in Spanish, gardening and philosophy were conducted. These institutions, established the first summer combined with Mrs. Smythe's Thursday afternoon social gatherings gave promise of cultural advancement, a major feature of the Little Landers design for community living. These events were designed to "prove that gracious living could elevate what otherwise was a drab existence" (Smythe 1909:3-4).

In 1909, the community had been layed out with townsite lots measuring 50 feet by 120 feet selling for \$250.00 and acre tracts selling at \$350- \$500, depending on location and soil. In addition to the townsite lots and acre tracts, linear parks were also planned. The townsite was planned in a traditional grid fashion. Many suburbs of the preceding decades used curved streets and broad areas of rural, landscaped open space to create a sense of picturesque, country tranquility. The Little Landers Plat, however, is a community of rectangular townsites and parks, straight roads intersecting at angles and acre tracts outside the townsite (see attached Little Landers plot map). This general plan could be perceived as an eden based on order. To reformers such as Smythe, the anti-wilderness connotation of straightness and thereby order mattered in a world viewed as chaotic.

The initial Little Landers plan called for each member of the colony to purchase a town lot and an acre away from the core community for agricultural pursuits. Deed restrictions specifically restricted minorities and defined 30 foot set-backs for homes, the mandatory planting of yards, and in the first few deeds, it was specified that house plans had to be approved by the Colony's architect. (This was dropped from the deeds almost immediately). Unlike many of the planned communities that developed during this era where houses were actually built and restrictions much more rigid, Little Landers had realized that this static "scientific" approach to living went against the individualist

grain for many Americans. Though restricted to who could live in the community, individuality was allowed in house design, garden plantings and agricultural pursuits. By the fall of 1910, 38 families were living in San Ysidro. Many of the original purchasers of land had been speculators who refused to carry out the terms of their contracts and actually never lived in the village. The company, by this time, had not made good on all its promises regarding roads, sidewalks, sewers, street lighting and supplying water to the struggling colonists. Further difficulties resulted when many of the settlers used all of their available income to purchase the land and seeds, leaving no cash to build a permanent house or buy other needed supplies. Historic photographs show that rather than the small Craftsman bungalows preferred by the founders, many of the colonists were living in tents and crude lean-to structures.

By 1910, the original rule requiring families to buy a lot and an acre plot was dropped. A family could now buy either a townsite or as many acres as they felt they could successfully plant. This change in ownership resulted in an increase in population of people who simply wanted to live in the community rather than practice agriculture. By 1912, again in order to increase the population so that an irrigation district could be formed. George Hall contributed land for the parks and landscaped them using arbors and bridges in the Downey tradition. Forty-seven new homes were built in 1912, increasing the population of San Ysidro to approximately 300 people.

Smythe's endeavor had gained national attention through a promotional campaign that included brochures, postcards and leaflets filled with personal testimony of the success of the colony. The initial ideals of the community ("a little land and a living") however had been compromised from the beginning. Many of the original settlers were middle class professionals (teachers, doctors, etc.) and single women who had been educated in wanting the better life symbolized by the Little Landers Colony and other suburban developments. Yet many of these early colonists had little experience or training in

agriculture and were unable to make a living on their plots. Consequently, they were forced to commute to the city in order to remain economically secure. In addition to the large number of agricultural novices attracted to San Ysidro, many of the earlier settlers were elderly: "many of the early settlers were white middle class elderly city dwellers with limited personal capital who had a rural childhood or a sentimental attachment for the soil and sought refuge from eastern cities because of retirement, ill health or economic adversity" (Lee 1975:41). In addition to the lack of skills, equipment, and working capital, problems dealing with the equality of the marketing system plagued the Little Landers community.

A different type of population increase occurred when the Jockey Club across the border was opened in 1916, with many of the 300 employees moving into San Ysidro. By this time, the restrictions on minorities had been dropped. The 1916 Hatfield flood completely destroyed any hope of the Little Landers becoming a successful community: 100 families lost their homes and by 1918, the Little Landers Incorporated was extinguished for failure to pay the state franchise tax of 1917. From this date, acre plots began to be subdivided into smaller individual holdings.

Following World War I, both the homestead ideal and back-to-the-land movements that had swept the U.S. had been replaced in the American psyche. The shortage of American labor from World War I and the flu epidemic impacted the nation as a whole. San Ysidro, as a border town, saw a steady increase of immigration populations arriving to fill the void.

It was in the early 1920s that San Ysidro began to completely lose its agricultural character. An engineer's survey of 1922 noted work would be done to provide fire protection for what had become largely a residential community (Lee 1975:47). In 1923: "there was built or under construction in the town more than 100 dwelling house's indicating a growth in population of a least 500" (San Ysidro Irrigation District 212-6, #2, File 1084b). By 1928, the population was estimated at 1200: "many new homes and business buildings having

been constructed recently" (Sun 2-28-28). Laborers and entertainers who worked in Tijuana in the casinos and race tracks lived in San Ysidro, crossing the border daily to work. By the 1920s the urban-industrial transformation that was sweeping the entire nation reached well into the suburbs and outlying communities. San Ysidro was not excluded from this change. The community focus gradually changed to cater to tourists and the commercial and social needs of an ethnically mixed town. The construction of hotels, auto courts, a permanent library, new churches, etc. reflect this change. In addition, the growing change in the ethnicity and economy of San Ysidro becomes apparent when the directories of the 1920s are reviewed; besides noting a wider range of occupations and available services, Spanish surnames begin to become more common.

This growth and change is further documented in the architectural changes that occurred. "In every period, homes reflect changing times and the evolving ambitions of their owners" (Reeves 1988:181). The earliest home (the San Ysidro Inn), which predates the 1909 Little Landers settlement, was constructed as a typical white, vernacular farmstead building, symbolizing the rural ideals of an earlier period of American history. With the Little Landers, the small craftsman type bungalow came into vogue. This structure, projecting an image of deeply rooted security and family unity, had become a sign of up-ward mobility associated with naturalism and Amercanism. This style and variants on the simple vernacular form continued to be built in San Ysidro throughout the 1920s with the addition of a new style, the Spanish Eclectic. The change to Spanish Eclectic style bungalows and the construction of numerous commercial buildings in the same style reflect the move in Southern California to redefine the past based on a Spanish heritage. What had become vogue in the upper class society had, by the mid to late 1920s, filtered down into the communities of the working class. This move to a new style had an economic base as well. Because of the rising cost of lumber, Spanish stucco and frame was cheaper to build than previous styles. As a result, thousands of these small, single family bungalows were built throughout Southern California. These homes, as

before, were for the most part not designed by architects. Individual homeowners purchased and constructed house styles available in dozens of catalogs. These homes were typically inexpensive to construct and maintain.

In San Ysidro, since World War II poorly planned infilling has occurred on a frequent basis. Although severely compromised by the construction of multi-stored apartments, move-on military housing, and poorly built houses, the historic core of the area is still visible.

Unlike the suburb developments of post World War II, where individuality seldom was expressed in neighborhood construction, small communities like San Ysidro reflect individual tastes, while at the same time retaining the concept of neighborhood; a concept that is rapidly disappearing in middle and upper-middle class areas where suburbia is often interpreted as row upon row of monotonous, impersonal planned communities. . . "few of them expressing more than conformity to a bland national taste. "(Reeve 1988:147). The core area of San Ysidro was initially designed to function as a neighborhood and although the cultural make-up and density have changed, it still reflects the original intent of providing a sense of place and belonging to its inhabitants. San Ysidro serves as an example of the intertwining of vernacular architecture and man-made landscapes of parks, narrow deep lots and set backs for yards that blended a variety of influences to create a feelings of informal, cozy living with a community cohesiveness.

"While the history of a town's form is much broader than the history of a single house, one can be reasonably confident that the cultural values that operate in a town's planning in some measure also influences the planning of its homes "  
(Upton and Vlach 1987:124).

San Ysidro is not a town of static facades frozen in an early 20th century arcadian community. Rather, it is a changing, dynamic neighborhood that retains architectural qualities from different periods of its evolving history. "The significant factor in California history is the interaction of successive immigration waves upon its life and culture. . . . And nowhere is

this so evident as in architecture styles: (Kirker 1985: 53). San Ysidro has evolved from primarily a middle-class community with white Protestant roots in the mid-west to a suburb of mixed ethnic backgrounds; over the century of settlement, as styles, densities and cultural heritage changed, the concept of neighborhood has been maintained.

Commerical, institutional and residential buildings representing vernacular, Spanish Eclectic, Mission Revival, Craftsman and Art Deco architectural genres were detailed in the first phase of the historic inventory for San Ysidro (see attached maps for project boundaries). As stated in the beginning, in terms of historic significance very few of the buildings in San Ysidro could be successfully nominated as outstanding examples of architecture or places associated with important people or historic events. Only three to five of the single family dwellings and seven of the extant non-residential buildings (San Ysidro Hotel, La Nola Hotel, The International, the San Ysidro Library, the Community Congregation Church, Templo de Restauracion and the Ferreteria International Hardware Supply Store) could be realistically considered. The emphasis for each of the evaluations will be one that stresses suburban design and community character, rather than isolated architectural design elements or resident history.

## RECOMMENDATIONS

There is more to preservation and historic designations than the individual historical ideals that change depending on what special interest group is consulted. Some preservationists, for example, seek accurate restoration to the point of replacing nails, glass and woods with nothing but originals; opting for restoring only the grandest buildings to a frozen moment in time. While this approach is sometimes desirable, for San Ysidro the goal should be to protect and maintain the communal heritage; to enrich the present and future by using remnants of the past in an intelligent and economically feasible way. The approach for appropriate rehabilitation of the San Ysidro neighborhood is to leave the buildings and the landscape functional while at the same time retain those qualities that reflect a sense of time and place. A successful program will allow for preservation, restoration, renovation, revitalization and reuse of the existing resources and allow historically sensitive infilling. An adequately developed plan can renew civic pride by physically involving the people who live in the area in both decision making and the revitalization process. By educating the public as to their options and the availability of various incentive programs, the restrictions placed on the area as a result of an historic designation will not be viewed by the residents as merely another example of bureaucratic control.

. . . . "El Pueblito historic district is recommended for the protection, preservation and restoration of San Ysidro's principal physical resource. The intent is not to make "El Pueblito" a quaint historical museum. Instead it is to shut down inappropriate and destructive new residential construction, restore dignity to commercial areas along San Ysidro Blvd, provide an opportunity for a major new village plaza, and put control of development back into the hands of the people".  
(R/UDAT 1989: Housing)

As clearly discussed in the Significance Overview of the foregoing report, San Ysidro has undergone considerable change over the past one hundred years. However, it still retains a sense of its historic past. In

assessing the potential significance of the proposed San Ysidro Historic District, it is imperative that the study area be viewed beyond the architectural and sketchy biographical data of earlier inhabitants. When studied as isolated buildings, the majority of the 128 evaluated structures do not qualify for federal, state, or local historic designation; they are neither architecturally nor historically significant. The area must be viewed as a single, cohesive entity; a neighborhood. The core area is a community that retains the fabric of narrow streets, deep lots, a linear park and a tightly grouped commercial district reflective of both the original Little Landers subdivision and early 1920s changes.

Many of the concerns addressed in both the 1987 and 1989 R/UDAT reports have direct bearing on whether or not the study area should be nominated as a historic district. These issues include:

- 1) Is it the historic houses of "El Pueblito" that need to be preserved or is it the way of life that it represents which is in need of preservation?
- 2) Would a Historic District accomplish this preservation of a culture or way of living or will it merely put a new layer of bureaucracy on individual decisions?
- 3) Are there any financial incentives associated with an Historic District that enable the residents directly and personally to benefit from the designation?
- 4) Will the community control its own process or will an Historic District remove the ability of San Ysidro residents to control their most important residential neighborhood?
- 5) How far reaching will the Historic District requirements be? Will it impact all improvement decisions such as painting and landscaping or will it control only block-buster multi-family housing development as it was intended to do?

6) Is there community support for the idea; is there enough support for the idea to make it a reality; is there a community process of discussion and education that can make it a reality?

(R/UDAT 1989: Housing)

Communities have a legitimate interest in preserving local historic neighborhoods, however the means towards making such decisions may be traditionally different for each culture. Public hearings conducted for San Ysidro have been unsuccessful in generating enthusiasm for the establishment of an historic district in San Ysidro; few, if any, residents within the study area have attended the two meetings given by Roth and Associates dealing with individual house identification, gathering bibliographic background or designating portions of the area as a historic district. Local residents interviewed during the field portion of this contract were unaware of the legal and planning limits associated with historic designation; their primary concern was: "whether historic nomination would prevent improvements to their property; could they split their parcels into smaller lots so that their sons or daughters could build a house; does historic designation mean the "City" will increase the taxes" (personal communications). Many of the residents interviewed felt that "historic designation" of the older neighborhoods would prevent the infilling by multi-story apartment buildings. In this case their concern was one of preventing or slowing down the increase of density and the number of low income housing, rather than viewing the area as "historically" important.

A Historic District Ordinance would accomplish the goals of preserving the current character of the study area and help to preserve the way of life only if there is community support and financial aid towards maintaining and restoring the older homes. A historic ordinance would focus the intent of a district towards urban planning rather than individual houses. However, the use of a Historic District Ordinance or nomination of the area into a Historic District should not be considered

until the community can successfully address the six issues listed above. If these critical issues can not be solved, a program involving additional rezoning and coordination with the recently adopted City of San Diego Growth Management Policy for the preservation of single family neighborhoods will address the problem of neighborhood disruption via multi-family, low income housing. The success or failure of a Historic District Ordinance will depend on community support and outside financing. Simply designating the area "historic" will not slow down the rate of deterioration found within the study area nor will it regenerate local pride of the older areas of San Ysidro.

Numerous instructions and ordinances are implemented at the time of an historic designation. The historic fabric of the San Ysidro neighborhood would be protected by using the U.S. Department of Interiors Standards for Rehabilitation and forming a community based Historic Architectural Review Board. The ten principals for retaining the design and character of already extant buildings is as follows:

- 1) Every reasonable effort shall be made to provide a compatible use for a property which requires minimal alteration of the building, structure, or site and its environment, or to use a property for its originally intended purpose.
- 2) The distinguishing original qualities or character of a building, structure, or site and its environment shall not be destroyed. The removal or alteration of any historic material, or distinctive architectural features should be avoided when possible.
- 3) All buildings, structures and sites shall be recognized as products of their own time. Alterations that have no historical basis and which seek to create an earlier appearance shall be discouraged.
- 4) Changes which may have taken place in the course of time are evidence of the history and development of a building, structure of site and its environment. These changes may have acquired significance in their own right, and this significance shall be recognized and respected.

5) Distinctive stylistic features or examples of skilled craftsmanship which characterize a building, structure, or site shall be greater with sensitivity.

6) Deteriorated architectural features shall be repaired rather than replaced, whenever possible. In event replacement is necessary, the new material should match the material being replaced in composition, design, color, texture, and other visual qualities. Repair or replacement of missing architectural features should be based on accurate duplications of features, substantiated by historic, physical, or pictorial evidence rather than on conjectural designs or the availability of different architectural elements from other buildings or structures.,

7) The surface cleaning of structures shall be undertaken with the gentlest means possible. Sandblasting and other cleaning methods that will damage the historic building materials shall not be undertaken.

8) Every reasonable effort shall be made to protect and preserve archaeological resources affected by, or adjacent, to any project.

9) Contemporary design for alterations and additions to existing properties shall not be discouraged when such alterations and additions do not destroy significant historical, architectural or cultural material, and such design is compatible with the size, scale, color, material, and character of the property, neighborhood or environment.

10) Whenever possible, new additions or alterations to structures shall be done in such a manner that if such additions or alterations were to be removed in the future, the essential form and integrity of the structure would be unimpaired.

An Historic Architecture Review Board would insure compatible infilling and the retention of an historic atmosphere in the community. Other historic survey reports have developed exact specifications for allowable changes within the designated historic boundaries; strictly defining and limiting height, yard and facade articulations, set back, yard and street scapes, building materials and design elements. As

demonstrated in the overview, individuality and variety predominated in this community with the exception that the majority of houses were one story bungalows. Design and maintenance guidelines for alterations and improvements should be created that are loosely defined. San Ysidro was never a "quaint" community; rather it was varied and functional. A continuum of options, rather than narrowly defined design selections, eliminate the possibility of a board approving again and again a "sameness" of architecturally pure styles; something the homes in San Ysidro were not. These criteria should be developed drawing from newspaper ads, mail order catalogs of the era, and existing treatments depicting the myriad of choices. The choices though broad would serve to limit the types of buildings allowed. The guidelines must be developed and made available to owner and the board at the same time historic designation is established. By illustrating the appropriate possibilities, the board can encourage construction of housing types compatible with the historic character of the neighborhood. Members of the Historic Architectural Review Board should be drawn from the local government, landowners, residents and experts in the field of history and planning.

The establishment of a Historic District Overlay Zone will allow the community some control over future development and the types of restoration programs needed to keep the district viable. An overlay zone retains the underlying zones that currently exist in an area; it does not change allowable uses. However, by its requirements, it may make some de facto changes in uses. For example, although, theoretically, multi-family housing might be an allowable use, it cannot be accomplished while meeting the specific design requirements for height, site utilization and setbacks.

Historic resources belong to the people and ordinances and regulations are passed "for the benefit of the public good". Ordinances alone, however, can and do cause antagonism. Individuals generally opt

for preservation if they either have a deep sense of appreciation for architectural quality and history or are offered economic incentives. Property owners must be presented with clear reasons why an historic designation within their community could be of a personal benefit. It is imperative that funding sources and incentive programs be clearly defined for the occupants of the core area. Throughout the U.S. many preservation projects are successful only because they have been able to defray costs by using a number of preservation incentives. These programs include RITC, preservation easements, property tax deferrals, restoration grants and community and economic developments programs. Possibilities include offering below market rate financing for restoration if the result contributes to the economic viability of the community, improves deteriorating neighborhoods or relieves housing needs. HUD's programs include urban homestead, CDBG Grants, UDA grants and Federal section 8 subsidies.

With a Historic District in place, the community and neighborhood could request that the City institute a number of programs to promote the revitalization of the area including:

- 1) Both owner and renter-occupied housing rehabilitation assistance.
- 2) Investment tax credits for the rehabilitation of single and multi-family units.
- 3) Tax abatement or other economic incentives.
- 4) Development of programs which discourage displacement of current and lower-income residents.
- 5) Use of Conditional Use Permits for alternative use of historic structures.
- 6) Use of Historic Building Code.

Perhaps the most important aspect determining the success or failure of an historic designation is community involvement. Through

various programs focusing on neighborhood involvement, the residents of San Ysidro can take an active role in the future course of their town. The following activities should be considered:

- Initiation of an amendment; a signed petition of 51% of the owners/occupants by area or a signed petition of 65% of the owners/occupants by number. The petition would measure the communities interest in historic rehabilitation.

- Community participation on the Design Review Board is essential. Residents need to be a valid part of decision making as it applies to their community.

- Retain the commercial strip within the core area; encourage commercial owners to return facades and uses to the historic period through tax incentives and main street programs.

- Keep the residential feeling of the neighborhood by discouraging mixed use north of San Ysidro Blvd and educating the landowners of viable development programs.

- Local community groups in conjunction with SOHO or other organizations should purchase at least one of the historic buildings to be used as a community rehabilitation project as well as an interpretive center and focus of community events. In conjunction with this purchase, a youth program through the local high school and college should be developed. Much like the mechanics classes offered in schools, the students would learn hands-on job training, receive school credit and at the same time develop a sense of community awareness by actually taking an active part in restoration.

- Through block parties and community picnics organize members into co-op work groups. Community work days where streets, yards, etc. can be cleaned could serve to restore community pride because the individuals will have directly invested in their community.

- Educational programs should be developed for both adults and children. If San Ysidro is to contain an historic district, an active education program needs to be instituted to generate community support and

understanding of restoration, rehabilitation and various preservation programs needed to insure that the district remains intact. Further, the history of the area should be incorporated into the educational system of the area, including the 4th grade history of California curriculum. Because the resident turn over in this area is high, it is suggested that a history of the neighborhood be offered at the Jr. High and High school level as well.

- Offer seminars and classes throughout the community showing painting, plasters, floor refinishing, wiring and plumbing techniques.

- Obtain a grant to develop both a home repair library and a tool library. Home improvements books, old house journals, etc. could be purchased and translated. A tool library could be housed in the community restored building and made available for free to residents actively involved in a particular restoration.

- Develop a skills and supplies bank in conjunction with hands-on training. This would be a neighborhood association composed of members having particular building skills or access to needed building supplies, thus reducing the cost of rehabilitation.

The viability of an Historic District in San Ysidro depends on community involvement, the availability of monies for rehabilitation, and whether or not the City of San Diego will offer substantial support beyond mere ordinance implementation. San Ysidro needs assistance in preserving those parts of its past that give it meaning while at the same time encouraging growth and development in ways that will ensure economic viability and a continuum of neighborhood cohesiveness. An historic designation without a detailed, implementation program for complete neighborhood rehabilitation including funding and revitalization programs and the coordinated efforts of all government and community groups will benefit neither the residents of San Ysidro nor the rapidly decaying historic element. If the program is to be successful, San Ysidro must no longer be viewed as San Diego's "step child". It must be symbiotically connected to the city so that its historic fabric and cultural heritage can survive.

### SIGNIFICANCE

### GENERAL OVERVIEW

#### SAN YSIDRO STUDY AREA- LITTLE LANDERS COMMUNITY

Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

Under accepted criteria, few of the individual structures within the study area qualify for federal, state, or local historic designation. Throughout its history, San Ysidro has been the home to few individuals who would qualify as persons important in history. As ordinary middle-class and blue collar workers, the majority of San Ysidro inhabitants often left little or no record in the local annals. Even the local residents interviewed during the course of the investigation offered little in the way of site specific background. This lack of data is compounded by the paucity of information found in the primary sources. Directories for San Ysidro do not include street addresses until the late 1950s; Sanborn maps are lacking; deeds are often incomplete and impossible to trace back to original ownership; irrigation and sewer records are incomplete; and local archives contain only fragments of lore that often lack references. Since it was not part of the scope of work, complete individual chain of titles were not compiled. This information, even if completed, does not necessarily provide a date of construction. The overall lack of data for this area resulted in compiling little or no social history for many of the structures selected by the city for additional study.

The concept of historic preservation, however, has grown beyond the confines of mere architecture to include the landscape itself:

The single building is but an element in a complex civic or landscape design. Except in the abstraction of drawing or photography, no building exists in a void: it functions as a part of a greater whole and can be seen and felt only through dynamic participation in that whole.  
(Mumford 1955:ix).

In assessing the potential significance of the proposed San Ysidro historic district, it is imperative that the study area be viewed beyond the mere architectural descriptions of individual structures coupled with sketchy biographical data of earlier inhabitants. This area is more than simply isolated "old houses" that retain certain stylistic elements reflective of an earlier period of San Diego's suburban history. This historical environment is rather the sum of the buildings, and its landscape. The spatial relationship of various buildings to each other, the pattern of the streets and roads, the location of major services and the chosen styles for individual homes combine to reflect both the ideals of the original founders of the colony and the visually apparent transformation of the community and its support institutions. Even as it moved away from its basic agrarian character, the original planned community of San Ysidro had the capacity to absorb change while at the same time retain its historical landscape (see attached 1928 and 1954 historic aerial photographs and the Little Landers site map). These figures visually depict the continuity of the neighborhood plan within the historic survey area. If the area is to be nominated as a local, state or national district, its significance lies in suburban planning rather than in the importance of individual houses or subjective aesthetic values. Unlike other planned communities in the San Diego area such as Rancho Santa Fe where an environment based on picturesque principles was created or districts that contain distinctive, uncompromised architecture such as Balboa Park and Golden Hills, the homes in San Ysidro are as a rule small and of no specific textbook style; no two are the same and most are in fair to poor condition. As a neighborhood, however, cohesion is evident.

In January of 1909, the Little Landers Colony #1 was formally incorporated (A detailed article regarding the Little Landers development was written by Lee (1975). Unless otherwise noted, information regarding the Little Landers was extracted from that source). Five hundred and fifty acres of land had been purchased, with streets, parks, town lots and acre plots marked out for prospective colonists. Prior to 1909, the area surrounding what was to become San Ysidro, had been the site of farms layed out like a ribbon along the

main artery of transportation between San Diego and Baja California. The subdivision of "Tia Juana" had been developed by the real estate firm of Hart and Stern in the valley area south and west nearer the international border. This small, rural community was destroyed by a flood in 1891 and never fully recovered.

William Smythe, a successful back-to-the-land colonizer and George Hall, former chairman of the California State Board of Horticulture, selected the site of the Belcher Ranch in the Tia Juana River Valley as the location for their settlement. As was typical of the suburban development genre that had evolved throughout the United States since the 1820s, the site was selected not only because of its fertile soil and available water, but also because of its access to a city. Since the 1820s, reformers had attempted to combine what was perceived as the best qualities of city and country: modern city conveniences melded with country ambiance. This movement, professing the borderland good life, had by the 1880s built into "a flood of articles, books, and even poetry that nearly overwhelmed publishers in the 1890s and succeeding decades". This literature mirrored and shaped turn of the century middle-class thinking (Stilgoe 1988:168). The 1906 San Francisco earthquake with "the toppling of towers and bridges quickly became a metaphor for the collapse of social and economic order, the end of traditional virtue" (Stilgoe 1988:280). Capitalizing on the fear and insecurities felt by much of the middle class, reformers such as Smythe offered an answer for economic and cultural security: "A little land and a living"; it was perceived by many "that it is the family on the acre of land which improves the national character" (Little Landers advertising, n.d.). The progressive literature glorified the single family home as the proper atmosphere to cement family ties and elevate community spirit. Combined with the preoccupation with health, fresh air and a general move away from the plight of urban industrial cities, many designs for community living had evolved.

In San Ysidro, lots were large enough for gardening yet aligned on streets to avoid the dangers associated with rural isolation. Community life

was centered in Redwood Hall, where town meetings, church services, the library and classes in Spanish, gardening and philosophy were conducted. These institutions, established the first summer combined with Mrs. Smythe's Thursday afternoon social gatherings gave promise of cultural advancement, a major feature of the Little Landers design for community living. These events were designed to "prove that gracious living could elevate what otherwise was a drab existence" (Smythe 1909:3-4).

In 1909, the community had been laid out with townsite lots measuring 50 feet by 120 feet selling for \$250.00 and acre tracts selling at \$350- \$500, depending on location and soil. In addition to the townsite lots and acre tracts, linear parks were also planned. The townsite was planned in a traditional grid fashion. Many suburbs of the preceding decades used curved streets and broad areas of rural, landscaped open space to create a sense of picturesque, country tranquility. The Little Landers Plat, however, is a community of rectangular townsites and parks, straight roads intersecting at angles and acre tracts outside the townsite (see attached Little Landers plot map). This general plan could be perceived as an eden based on order. To reformers such as Smythe, the anti-wilderness connotation of straightness and thereby order mattered in a world viewed as chaotic.

The initial Little Landers plan called for each member of the colony to purchase a town lot and an acre away from the core community for agricultural pursuits. Deed restrictions specifically restricted minorities and defined 30 foot set-backs for homes, the mandatory planting of yards, and in the first few deeds, it was specified that house plans had to be approved by the Colony's architect. (This was dropped from the deeds almost immediately). Unlike many of the planned communities that developed during this era where houses were actually built and restrictions much more rigid, Little Landers had realized that this static "scientific" approach to living went against the individualist grain for many Americans. Though restricted to who could live in the community, individuality was allowed in house design, garden plantings and agricultural pursuits. By the fall of 1910, 38 families were living in San Ysidro. Many of the original purchasers of land had been speculators who

refused to carry out the terms of their contracts and actually never lived in the village. The company, by this time, had not made good on all its promises regarding roads, sidewalks, sewers, street lighting and supplying water to the struggling colonists. Further difficulties resulted when many of the settlers used all of their available income to purchase the land and seeds, leaving no cash to build a permanent house or buy other needed supplies. Historic photographs show that rather than the small Craftsman bungalows preferred by the founders, many of the colonists were living in tents and crude lean-to structures.

By 1910, the original rule requiring families to buy a lot and an acre plot was dropped. A family could now buy either a townsite or as many acres as they felt they could successfully plant. This change in ownership resulted in an increase in population of people who simply wanted to live in the community rather than practice agriculture. By 1912, again in order to increase the population so that an irrigation district could be formed. George Hall contributed land for the parks and landscaped them using arbors and bridges in the Downey tradition. Forty-seven new homes were built in 1912, increasing the population of San Ysidro to approximately 300 people.

Smythe's endeavor had gained national attention through a promotional campaign that included brochures, postcards and leaflets filled with personal testimony of the success of the colony. The initial ideals of the community ("a little land and a living") however had been compromised from the beginning. Many of the original settlers were middle class professionals (teachers, doctors, etc.) and single women who had been educated in wanting the better life symbolized by the Little Landers Colony and other suburban developments. Yet many of these early colonists had little experience or training in agriculture and were unable to make a living on their plots. Consequently, they were forced to commute to the city in order to remain economically secure. In addition to the large number of agricultural novices attracted to San Ysidro, many of the earlier settlers were elderly: "many of the early settlers were white middle class elderly city dwellers with limited personal capital who had a rural childhood or a sentimental attachment for the soil and

sought refuge from eastern cities because of retirement, ill health or economic adversity" (Lee 1975:41). In addition to the lack of skills, equipment, and working capital, problems dealing with the equality of the marketing system plagued the Little Landers community.

A different type of population increase occurred when the Jockey Club across the border was opened in 1916, with many of the 300 employees moving into San Ysidro. By this time, the restrictions on minorities had been dropped. The 1916 Hatfield flood completely destroyed any hope of the Little Landers becoming a successful community: 100 families lost their homes and by 1918, the Little Landers Incorporated was extinguished for failure to pay the state franchise tax of 1917. From this date, acre plots began to be subdivided into smaller individual holdings.

Following World War I, both the homestead ideal and back-to-the-land movements that had swept the U.S. had been replaced in the American psyche. The shortage of American labor from World War I and the flu epidemic impacted the nation as a whole. San Ysidro, as a border town, saw a steady increase of immigration populations arriving to fill the void.

It was in the early 1920s that San Ysidro began to completely lose its agricultural character. An engineer's survey of 1922 noted work would be done to provide fire protection for what had become largely a residential community (Lee 1975:47). In 1923: "there was built or under construction in the town more than 100 dwelling house's indicating a growth in population of a least 500" (San Ysidro Irrigation District 212-6, #2, File 1084b). By 1928, the population was estimated at 1200: "many new homes and business buildings having been constructed recently" (Sun 2-28-28). Laborers and entertainers who worked in Tijuana in the casinos and race tracks lived in San Ysidro, crossing the border daily to work. By the 1920s the urban-industrial transformation that was sweeping the entire nation reached well into the suburbs and outlying communities. San Ysidro was not excluded from this change. The community focus gradually changed to cater to tourists and the commercial and social

needs of an ethnically mixed town. The construction of hotels, auto courts, a permanent library, new churches, etc. reflect this change. In addition, the growing change in the ethnicity and economy of San Ysidro becomes apparent when the directories of the 1920s are reviewed; besides noting a wider range of occupations and available services, Spanish surnames begin to become more common.

This growth and change is further documented in the architectural changes that occurred. "In every period, homes reflect changing times and the evolving ambitions of their owners" (Reeves 1988:181). The earliest home (the San Ysidro Inn), which predates the 1909 Little Landers settlement, was constructed as a typical white, vernacular farmstead building, symbolizing the rural ideals of an earlier period of American history. With the Little Landers, the small craftsman type bungalow came into vogue. This structure, projecting an image of deeply rooted security and family unity, had become a sign of up-ward mobility associated with naturalism and Americanism. This style and variants on the simple vernacular form continued to be built in San Ysidro throughout the 1920s with the addition of a new style, the Spanish Eclectic. The change to Spanish Eclectic style bungalows and the construction of numerous commercial buildings in the same style reflect the move in Southern California to redefine the past based on a Spanish heritage. What had become vogue in the upper class society had, by the mid to late 1920s, filtered down into the communities of the working class. This move to a new style had an economic base as well. Because of the rising cost of lumber, Spanish stucco and frame was cheaper to build than previous styles. As a result, thousands of these small, single family bungalows were built throughout Southern California. These homes, as before, were for the most part not designed by architects. Individual homeowners purchased and constructed house styles available in dozens of catalogs. These homes were typically inexpensive to construct and maintain.

In San Ysidro, since World War II poorly planned infilling has occurred on a frequent basis. Although severely compromised by the construction of

multi-stored apartments, move-on military housing, and poorly built houses, the historic core of the area is still visible.

Unlike the suburb developments of post World War II, where individuality seldom was expressed in neighborhood construction, small communities like San Ysidro reflect individual tastes, while at the same time retaining the concept of neighborhood; a concept that is rapidly disappearing in middle and upper-middle class areas where suburbia is often interpreted as row upon row of monotonous, impersonal planned communities. . . "few of them expressing more than conformity to a bland national taste. "(Reeve 1988:147). The core area of San Ysidro was initially designed to function as a neighborhood and although the cultural make-up and density have changed, it still reflects the original intent of providing a sense of place and belonging to its inhabitants. San Ysidro serves as an example of the intertwining of vernacular architecture and man-made landscapes of parks, narrow deep lots and set backs for yards that blended a variety of influences to create a feelings of informal, cozy living with a community cohesiveness.

"While the history of a town's form is much broader than the history of a single house, one can be reasonably confident that the cultural values that operate in a town's planning in some measure also influences the planning of its homes "  
(Upton and Vlach 1987:124).

San Ysidro is not a town of static facades frozen in an early 20th century arcadian community. Rather, it is a changing, dynamic neighborhood that retains architectural qualities from different periods of its evolving history. "The significant factor in California history is the interaction of successive immigration waves upon its life and culture. . . . And nowhere is this so evident as in architecture styles: (Kirker 1985: 53). San Ysidro has evolved from primarily a middle-class community with white Protestant roots in the mid-west to a suburb of mixed ethnic backgrounds; over the century of settlement, as styles, densities and cultural heritage changed, the concept of neighborhood has been maintained.

At the structure specific level, much of the area is in drastic need of repair. As such, San Ysidro needs assistance in preserving those parts of its past that give it meaning while at the same time encouraging growth and development in ways that will ensure economic viability and a continuum of neighborhood cohesiveness. An historic designation of the study area without a plan for complete neighborhood rehabilitation will benefit neither the current residents nor the rapidly decaying historical element.

Commerical, institutional and residential buildings representing vernacular, Spanish Eclectic, Mission Revival, Craftsman and Art Deco architectural genres were detailed in the first phase of the historic inventory for San Ysidro (see attached maps for project boundaries). What follows is the historic evaluation and significance statements selected by the City Planning Department. As stated in the beginning, in terms of historic significance very few of the buildings in San Ysidro could be successfully nominated as outstanding examples of architecture or places associated with important people or historic events. Only three to five of the single family dwellings and seven of the extant non-residential buildings (San Ysidro Hotel, La Nola Hotel, The International, the San Ysidro Library, the Community Congregation Church, Templo de Restauracion and the Ferreteria International Hardware Supply Store) could be realistically considered. The emphasis for each of the evaluations will be one that stresses suburban design and community character, rather than isolated architectural design elements or resident history.

THE FOLLOWING INVENTORY FORMS ARE ARRANGED BY  
STREET. THOSE STRUCTURES SELECTED FOR SIGNIFICANCE  
ARE EACH MARKED IN THE UPPER RIGHT HAND CORNER.

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The one acre lot A69 (see attached Little Landers Map) was purchased by Thoustrap in 1915  
As a representative for the Little Landers Corporation Thoustrap's name appears on over 87 parcels within the colony. The house does appear on the 1928 aerial. Thus, the construction date falls between 1915 and 1928. An intensive review of primary sources (i.e.: Little Landers Log Books, Irrigation Records, Directories, etc.), and secondary sources (personal interviews and newspapers) failed to uncover any evidence that this house was associated with any important event or person within the community, associated with local lore, or that the building itself is architecturally significant.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for either federal, state or local historic designation. This structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

6. Present Use: residence Original Use: residence

### DESCRIPTION

- 7a. Architectural style: FOLK VERNACULAR
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story bungalow with medium pitch front facing gable roof and a dropped, centered medium pitch gable over partial porch and a pitched dormier on each side of the house. Door is slightly off-set to the right giving the exterior an asymmetrical appearance.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding; triangular wood banded pediment under each gable (same lap siding painted a contrasting color for accent). ROOF: composition shingle; moderate overhang; exposed eaves; plain gableboard. CHIMNEY: none. WINDOWS: metal bars on all; front 2 windows appear to be one fixed pane with a single, fixed thin vertical 2 pane side light; plain surrounding board trim. DOOR: front, slightly off-set with metal security screen; plain surrounding board trim. PORCH: open, 1/2 porch; pitch roof over porch with 2 square column supports; simple molded capitals and bases; columns sitting on wide wood block pillars; 3 cement steps to porch; no railing system.

18. Related features: \_\_\_\_\_

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original acre lot A72 (see attached Little Landers Map) was purchased by M.L. Bridge in 1914. The house does not appear on the 1928 aerial and therefore was not constructed during the Little Lander's period. No biographical data was obtained from either a review of the City Directories or available Little Landers Property Books for a M.L. Bridge.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for federal, state or local historic designation. This structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

### DESCRIPTION

7a. Architectural style: CRAFTSMAN BUNGALOW WITH PRAIRIE ELEMENTS

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story, roughly rectangularly shaped house with a flat widely overhanging roof, subtle details and wall/roof recesses emphasizing low linear nature of this house (Only house in study area with this outline). Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco with cement foundation; angular recesses at corners; squared bays; simple molded band around entire perimeter of house below brackets; rear and side 1/3 of house covered with plywood. ROOF: composition sheeting; wide boxed overhang; numerous wood brackets at irregular intervals; extremely wide fascia board. CHIMNEY: none. WINDOWS: front 2 sets of windows: to the left 3 small casement windows with 3 small vertical lights on top/ single light below; to the right- set of 3 larger casement windows, 6 lights in each (side windows vary in size and sash pattern); plain, wide surrounding board trim. DOOR: side entrance, glazed with 6 square lights on top/ 3 vertical lights on bottom; plain surrounding board trim. PORCH: entry only; no covering; principal roof extends only slightly; 2 cement steps with plain round metal and board railing.

8. Construction date:

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original acre parcel A72 (see attached Little Landers Map) was purchased by M.L. Bridge in 1914. The house does not appear on the 1928 aerial, therefore was not constructed during the Little Lander's period. No biographical data was obtained from either a review of the City Directories or available Little Landers Property Books for a M.L. Bridge.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for federal, state or local historic designation. This structure is not considered historically distinctive (see attached discussion dealing with historic significance of the study area). Architecturally, it is the only house in the area with the specific design elements discussed on the previous page.

17. Is the structure: On its original site?: ☒ Moved? \_\_\_\_\_ Unknown? \_\_\_\_\_
18. Related features: detached garage across alley; good exterior condition; older vegetation includes pepper trees.

### SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original lot (Parcel A98, see attached Little Landers map) was purchased in 1910 by Sarah Youmans. The Youmans owned other land in the community including town lot 28 and acre lot 6. The lot has been owned continuously by the Youmans family since 1910. In 1926 Elmer Sarah's son) and Nora Youmans arrived in San Ysidro: "at that time it was a community, not just a place to drive through. . . there was no better place to raise a family.. ." (SWC 12/22/55). The Elmer Youmans family built this house and raised turkeys, goats, rabbits, ducks, and had a perennial garden on their land. The City Directories list Elmer and his father, Herbert, as carpenters. They were responsible for building many of the homes in the area. Elmer Youman was postmaster for San Ysidro in 1938.

The historic importance of this structure lies in its early construction date (associated with the original Little Landers settlement) and its association with the Youmans family.

### DESCRIPTION

7a. Architectural style: VERNACULAR

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story house with a flat-topped, hip roof. Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS:  
WALL TREATMENT: white stucco. ROOF: composition shingle; hip roof with irregular hipped extension on one side; no exposed rafters or beams. CHIMNEY: none. WINDOWS: fixed, inset, rectangular main window with center sash bar arrangement of 6 lights on top/ 3 on bottom; adjacent windows to the side have sash bar arrangement of 4 lights on top/ 2 on bottom; side window is bell shaped with similar sash treatment as the door; windows along sides of the house are combination double hung and multi-light casements. DOOR: surrounding treatment is an inverted bell; glazed door with 6 lights on top/3 vertical panes on bottom; irregularly shaped fixed lights surround the door- panes are cut to fit into the curvature of the inverted bell. PORCH: none; no overhang; 3 front facing cement steps to entry.  
Detached garage has pyramidal roof. Detached house to the back (132 East Park) has stucco exterior; roof line is front facing medium gable with two lower hip roofs; no exposed rafters. Porch treatment elements include slender round doric porch supports. The front and rear house appear to have similar construction and were built at the same time.

18. Related features: combination picket and low brick fence along perimeter

## SIGNIFICANCE

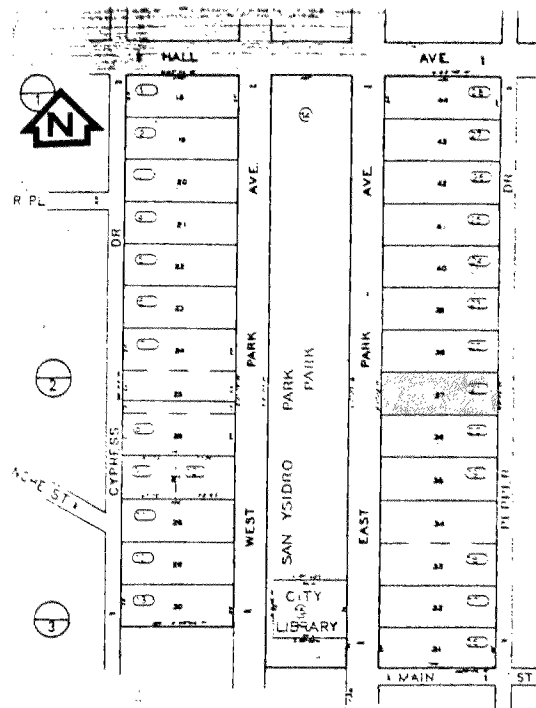

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original town lot 37 (see attached Little Landers Map) was purchased by Maria Wakefield in 1913. Apparently many of the original colonists were single, unattached women who bought undeveloped lots, stayed for an undetermined time and then moved away. (They appear in the directories for one or two years. Some perhaps married which would account for the names no longer appearing in the directories). Extensive archival research coupled with interviews failed to document the date of construction, biographical data of the original inhabitants or any associated local lore.

A review of the 1928 aerial indicates that a structure was on this lot. It is unclear however whether or not this is the same structure. By 1928 most of East Park and Olive had been filled in by building activity.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for either federal, state or local historic designation. This structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

16. Threats to site: None known \_\_\_\_ Private Development ☒ Zoning ☒ Vandalism \_\_\_\_  
Public Works Project \_\_\_\_ Other: \_\_\_\_
17. Is the structure: On its original site?: ☒ Moved? \_\_\_\_ Unknown ? \_\_\_\_
18. Related features: new structure (apartment) in back; chain-link fence perimeter

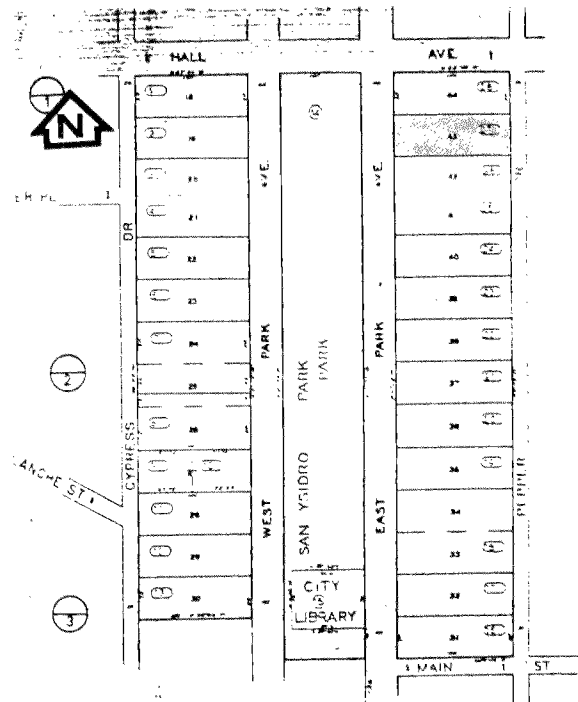

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original town lot 43 (see attached Little Landers Map) was purchased by Alex Schwabe as an improved lot in 1915. This implies a pre-1915 date of construction. Extensive archival research coupled with lengthy informant interviews, however, failed to document the actual date of construction, biographical data of the original inhabitants or any associated local lore.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for federal, state or local historic designation. This structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

### DESCRIPTION

7a. Architectural style: FOLK VERNACULAR w/ SIMPLE COLONIAL REVIVAL DOOR ELEMENTS

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story structure with medium pitch side facing gable roof and shed roof extension along rear ("Hall and Parlor" configuration). Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding; plain undecorated corner boards and cornice boards (original siding was board and batten). ROOF: composition shingle; moderate overhang; boxed eaves and rafters; plain eaves fascia and gableboard. CHIMNEY: none. WINDOWS: 2 front double hung single pane, unevenly spaced on either side of front door; windows covered with security bars; batten shutters; lentil over windows slightly flared at both ends. DOOR: can not see, security screen; flat column pilasters on each side of door (only house in survey area with this type of door surrounding treatment); narrow bracketed hood tops door. PORCH: none; 3 front facing cement steps to front door; attached lattice covered porch in rear.

Additional structures: single car garage and sheds in rear.

8. Construction date:

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original town lot 4 (see attached Little Landers Map) was purchased by a Mr. Stokes in 1912. According to the current owners, this house dates to the original Little Landers occupation. When it was originally built, it had a redwood board and bat exterior. Interviews and archival research failed to document any information regarding Mr. Stokes and his activities during the Little Landers period.

6. Present Use: Church Original Use: Catholic Church

### DESCRIPTION

7a. Architectural style: MISSION REVIVAL

7b. Describe present physical description of site or structure; describe major alterations from original condition:

Simple two story building with flat roof; the positioning of the bell tower at the right side results in an asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco; simple stucco coping at roof line, stucco relief on wall face midway between roof and entry arch (possibly contained glass elements in the past) ROOF: bell tower has pyramidal tile roof; square bell tower with cross at top, openings in tower are 4 semi-elliptical arches. WINDOWS: all have been altered; front narrow arched recessed windows on either side of door; thin undecorated board trim; sill extends slightly beyond window opening; windows on side of building are rectangular insets. DOOR: recessed double door with arched fan light.

Overall appearance of building is stark with little or no design elements; little vegetation.

Residents indicate that building was severely altered when the Catholic diocese sold the building.

Original building could have been designed by Louis Gill (informant).

## SIGNIFICANCE

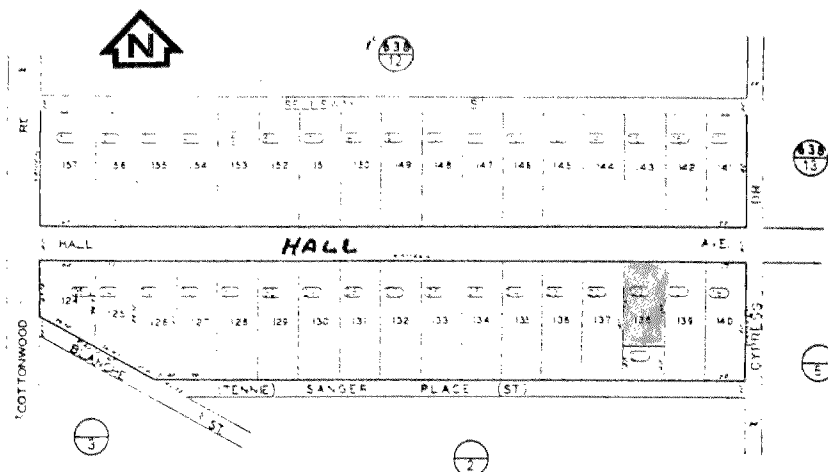

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

This simple Mission Revival building was originally Our Lady of Mount Carmel, the first Catholic Church in San Ysidro. Father Seville Alloero provided the dedication and blessing at the first service on Easter Sunday, 1927. The church was built by Mr. W.B. Settle, a San Diego carpenter and contractor for the sum of \$5,100.00 (personal communications: Carolyn Garcia, Mt. Carmel Heights Church, 1989). The money for the construction of Mount Carmel was donated by Mr. Frank Beyers, described as a "capitalist of San Ysidro and Tijuana, Mexico, with a long list of benefactions in his community" (News Notes of California Libraries: Vol 20, #1:pg 28). In addition to owning a large diary, known as Rancho Lechuza located west of the study area, Mr. Beyers built and owned a home on Hall, donated money for the construction of the community church, the Catholic church, the library, and quit claimed title to the Civic Center located in the park. A major street in San Ysidro is named after Frank Beyers.

## HISTORIC RESOURCES INVENTORY

### 114 Hall "Templo de Restauracion (Roca-refugio)"

#### 19. SIGNIFICANCE CONT.

The significance of this Church does not lie in its Mission Revival style nor in its association with an individual important in the post 1916 development of San Ysidro. Rather, as the first Catholic Church in San Ysidro, the original site of Our Lady of Mount Carmel, the building reflects the social and cultural changes that were beginning to occur in this town in the early 1920s. "The significant factor in California history is the interaction of successive immigrant waves upon its life and culture" (Kirker 1986:53).

It was in the early years of the 1920s that San Ysidro began to lose its agricultural character. An engineer's survey of 1922 noted work should be done to provide fire protection for what had become largely a residential community (Lee 1975:47). In 1923 "there was built or under construction in the town more than 100 dwelling houses, indicating a growth in population of at least 500: (San Ysidro Irrigation District 212-6, #2 File 1084b).

Following World War I, both the homestead ideal and back-to-the-land movements that had swept the U.S. had been replaced in the American psyche. The shortage of American labor from World War I and the flu epidemic impacted the nation as a whole. San Ysidro, as a border town saw a steady increase of immigration populations arriving to fill the void. In addition, many laborers and entertainers who worked in Tijuana in the casinos and race tracks lived in San Ysidro, crossing the border on a daily basis to and from work. An urban-industrial transformation was sweeping the nation, reaching well into the suburbs and outlying communities. San Ysidro was no exception. The community focus gradually changed to cater to tourists and the commercial and social needs of an ethnically mixed town. The growing change in the ethnicity of San Ysidro becomes apparent when the directories of the 1920s are reviewed; besides noting a wider range of occupations and available resources, Spanish surnames begin to frequently appear.

The Little Landers, like other planned communities of the era, explicitly restricted minority groups in an effort to create a totally homogenous place grounded in the moral ideals of white, middle-class Protestants; a place "where families 'knew' who their future neighbors would be" (Stilgoe 1988:232).

Our Lady of Mount Carmel (now Templo de Resaurection) serves as a symbol of the changing cultural make-up of San Ysidro; a moving away from a predominately Protestant, mid-Western Little Landers community toward an ethnically mixed community where many of the permanent residents were and are of a Catholic-Hispanic background.

### DESCRIPTION

7a. Architectural style: FOLK VERNACULAR

7b. Describe present physical description of site or structure; describe major alterations from original condition:

In the 1920s served as rectory for Catholic priest (next door to church); \*dense plant growth prohibits good photo/or detailed description of building.

Long narrow house with 2 low pitch front facing gables and a small gable over front door. Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: metal lap siding (over wood lap); decorative rock skirt around bottom 1/3 of structure. ROOF: composition shingle; moderate overhang; plain eaves fascia and gableboard. CHIMNEY: none. WINDOWS: 1 main front focal window: fixed with a narrow 3 vertical light casement abutting on either side; plain surrounding board trim. DOOR: plywood. PORCH: low pitch gable roof over front door entry; 2 stick, open triangle knee braces; no porch supports; 2 cement steps to door.

8. Construction date:

Estimated: 1916-1928

9. Architect: \_\_\_\_\_

10. Builder: \_\_\_\_\_

11. Approx. property size (in feet):

### DESCRIPTION

7a. Architectural style: CRAFTSMAN

7b. Describe present physical description of site or structure; describe major alterations from original condition:

\* dense vegetation- photograph/building description difficult to obtain

One story bungalow with a low pitch front facing gable and a dropped low pitch front facing gable over a full porch (possible shed extension in rear). Asymmetrical front facade (door and porch steps at far right). STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding; pediment under porch gable: triangularly shaped, boxed lattice with a jig-saw decorative element placed over it. ROOF: composition shingle; moderate overhang; plain eaves fascia and gableboards. CHIMNEY: none. WINDOWS: 1 main front window (left of door)- appears to be double hung (covered with security screen); plain surrounding board trim; double hung side windows. DOOR: right front, inside porch; plywood, covered by screen. PORCH: full porch with tapered wooden pillars resting on massive piers; solid lap siding railing system from ground level to approximately 2-3' above porch floor; 4 front facing cement stairs to porch  
3 cobble/cement pier remnants at front sides of house; pond remnants in front yard.

8. Construction date:

### DESCRIPTION

7a. Architectural style: Vernacular

7b. Describe present physical description of site or structure; describe major alterations from original condition:

Series of 5 small, identical detached units with medium pitch front facing gable and side entrance; units are set on the lot in a rectangle/narrow side fronting street (each is approximately 50' by 20' in size). Asymmetrical front face. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: wide lap siding; exposed concrete block foundation; horizontal louvered vent, boxed and silled under gable. ROOF: composition sheeting; exposed eaves; plain gableboard; moderate overhang. CHIMNEY: none. WINDOWS: paired and single; double hung with one light in each; sill and lentils extend beyond windows; lentils have slight flare; the two sets of front windows have a narrow shelf above each lentil. DOOR: large oval glazed with molded trim along base; door in past had shelf; most likely similar to windows. PORCH: none; 2 cement steps to stoop; metal railing on one side.  
UNITS MOVED ONTO PROPERTY.

### DESCRIPTION

7a. Architectural style: CRAFTSMAN BUNGALOW- ALTERED

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story bungalow with low pitch, cross-gable roof and semi-enclosed porch. Asymmetrical, "L-shaped" front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding; no corner boards; louvered square vent under gable; exposed undersurface of the gable is open rake, resulting in a "ladder" effect. ROOF: composition shingle; plain undecorated eaves fascia and gableboard; 2 square knee braces at side of gable edges. CHIMNEY: none. WINDOWS: all front facing windows have been replaced with metal sliders; side windows are 2 sets of double hung with 4 small lights on top/ 1 rectangular pane on bottom; surrounding trim is very wide undecorated board. DOOR: front facing, plywood with no decorative trim. PORCH: inset, open porch (modified- original porch would have been side entranced; existing porch is likely recent addition); entry has tapered wood pillars with simple molded capitals; pillars rest on large wooden pier that are covered with lap siding and plain undecorated corner boards; porch roof is part of the side gable; 2 cement steps to porch.

Detached garage (converted to apartment) to the back and side of main structure: unit contains 12 light windows and glazed door- likely taken from front structure during remodeling.

8. Construction date:

Estimated: 1916-1928

9. Architect: \_\_\_\_\_

10. Builder: \_\_\_\_\_

11. Approx. property size (in feet):

### DESCRIPTION

7a. Architectural style: FOLK VERNACULAR

7b. Describe present physical description of site or structure; describe major alterations from original condition:

"T-shaped", one story bungalow with combination cross-gable and hipped gable roof line (reflecting numerous alterations and additions to the main structure). Asymmetrical front facade.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco siding. ROOF: composition shingles with exposed eaves; plain wood knee braces at gable edges; two front gables are accented with two narrow strips forming an upside down "T" directly under the gable; plain undecorated gableboard.

WINDOWS: double hung with single light; plain board trim on three sides, no board trim along bottom of the window. DOOR: two front doors, both have iron security screens; plain surrounding board trim.

PORCH: 3/4 wrap-around porch with 1 by 1 porch supports; open metal rail system; lattice work extends from plastic awning roof to approximately 3' above porch floor (porch system is a recent addition to main structure); 3 front entry cement steps to door.

8. Construction date:

Estimated: post 1913-1928

9. Architect: \_\_\_\_\_

## SIGNIFICANCE

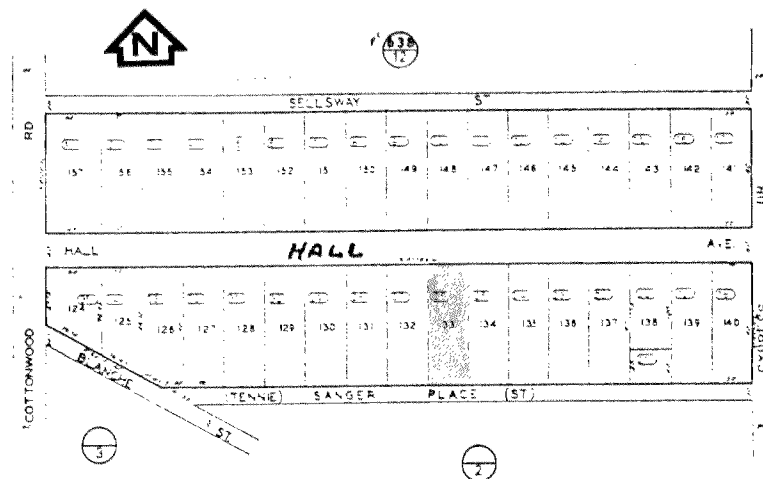

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original town lot 133 (see attached Little Landers Map) was purchased by M. Johnson in 1913 as one of many properties he bought between 1912-1915. Extensive archival research coupled with interviews failed to document the date of construction, biographical data of the original inhabitants or any associated local lore.

By 1928, this side of Hall Ave had at least 10 structures and a church. The 1928 aerial shows a house on this particular lot, however it is unclear whether or not this is the same building that currently occupied the site.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for either federal, state or local historic designation. This structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

### DESCRIPTION

7a. Architectural style: SPANISH ECLECTIC, FLAT ROOF

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story front facing house with flat roof. "L-shaped" yet box-like appearance; asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco with cement foundation. ROOF: decorative tile pattern over flattened arch entry; 3 sets of 3 ceramic drains below roof line; roof corners are slightly parapeted. CHIMNEY: none. WINDOWS: front focal window is 3 sections: center window is fixed with 8 small lights on top/ 1 light on bottom; side panels are double hung with single panes; an additional fixed window is located to the right of the door. Windows along the side of the house are double hung with the same sash bar pattern as the front focal windows. All windows have stucco sills; the 2 front windows have bracketed shed roofs (covered with roofing tile and supported by massive stucco braces). DOOR: glazed with 2 glazed side panels; glaze pattern is 3 square lights on top/ 3 rectangular lights on the bottom; side panel has 1 square light on top/ 1 rectangular light on the bottom; glass sash bar placement emphasizes vertical lines of the door. PORCH: four cement steps to open front facing half porch; entry is accented by a wide flattened arch and stucco wall.

No detached structures.

### DESCRIPTION

7a. Architectural style: VERNACULAR

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story bungalow with a front facing, low pitch gable roof and a dropped, off-set, low pitch front facing gable over a 3/4 porch. The off-set roof line gives the house an asymmetrical front facade.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding, plain cornerboards, open vertical strips with a thin, molded and toothed horizontal board along cornice create a wide pediment under the gable of the porch roof (the same element appears under the main roof line, but not as large).

ROOF: composition shingle; moderate eave overhang with plain board eaves fascia and gableboard.

CHIMNEY: none. WINDOWS: 2 sets of 2 vertical double hung windows; 1 set on each side of the front door (sash bar pattern on upper window is a diamond shape; single pane on the bottom; plain board surrounding detail with sills extended slightly beyond window opening. DOOR: partially glazed with window treatment covered with an "x" strip pattern; 4 vertical wooden panels on the bottom; door covered with metal screen; plain undecorated board trim around door opening. PORCH: 3/4 open porch with plain 2 by 2 porch supports; 1 front entry cement step to a cement porch.

(Hettich 1988:4)

### SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The first church in the San Ysidro area used by the Little Landers was a tent dubbed "the north annex". It had been added to the rustic Redwood Hall, a structure located in the park that served as the focus of community activities. On Sundays, Reverend Josiah Poeton, one of the original Little Landers organizers and other visiting ministers conducted Protestant church services for the Federated Church, Sunday School for the fifty children in the settlement and Christian Science services for the members of that faith (Lee 1975:40). Though not a religious settlement per se, the 1909 Little Landers planned community attracted primarily middle-class, white Protestants with roots in the mid-west. They had immigrated from areas that were typically homogeneous communities whose values and virtues, suggested by the Protestant ethic were quite similar (Russo 1974:40).

# HISTORIC RESOURCES INVENTORY

## 173 HALL Community Congregation Church

### 19. SIGNIFICANCE CONT.

Although church services were conducted from the beginning of the settlement, the Community Church was not formally founded until June 8, 1913. The constitution was approved on October 12, 1913. The Church had 21 members; rent for the Little Landers Hall was \$6.50 per month (Hettich 1988:4). In November of 1916, a committee was appointed to select and acquire a site on which to build a permanent house of worship. However the flood of 1916, World War I, a flu epidemic and a dwindling population between 1916 and 1920 held up the project for eight years. By acquiring community-wide donations, San Ysidro's first permanent structure for a church was dedicated on June 29, 1924. The corner lot, purchased in 1913 by Sarah Rust, was donated to the church. She and her daughter donated the money for the stairs and windows. Mr. Frank Beyers donated money and provided supervision for the installation of the drainage and gutter systems. Since 1909 twenty-six ministers have served the community, delivering the Gospel and performing weddings, christenings and funeral services (Rev. Reinger 1989 p.c.).

In addition to being the first Protestant Church in San Ysidro, this structure is significant because it was designed by Louis Gill, the nephew of Irving Gill. Gill (born in New York in 1895, a graduate of the Architectural University of Syracuse in 1911) was associated with his uncle from 1911 until 1919. Between 1911-1914 he worked first as a draftsman and then as a partner with his uncle (McCambridge 1973: n.p.). Between 1920 to the late 1930s, Gill drew plans for numerous churches, hospitals, commercial buildings, apartments and parking garages. Other churches in the San Diego area built by Gill include the Sacred Heart Church in Coronado, Mission Hills Congregational, St. James by the Sea, and various Congregational Churches in San Diego, La Mesa, and Del Mar. He was associated with other San Diego architects in major public building construction including the County Administration Building. After 1945, Gill was active in civic activities in San Diego and in the AIA (Gebbard 1983:n.p.)

Gill had extensive knowledge of traditional Mexican architecture and many of his buildings were of this style. He was also an advocate of the Aikon Lift Method, whereby walls with windows and doors were made before the entire frame was lifted up thereby radically reducing the overall cost of construction (McCambridge 1973: n.p.).

Gill designed the Congregational Church in 1924 for the community of San Ysidro. In 1927, he designed a commercial and apartment building on San Ysidro Blvd for R.W. Smith (see significance evaluation for 147-149 San Ysidro Blvd). The Architectural Drawing Collections at U.C.S.B. has plans for both these structures. Only the front elevations were requested for the current investigations.

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

An intensive review of both primary sources (i.e.: deed books, Little Lander log books, Irrigation records, City directories, etc.), and secondary sources (personal interviews and newspaper articles) failed to uncover any evidence that this house was associated with an important person of the community, that an important event occurred here or that the building itself is considered architecturally significant.

Construction date is estimated between 1929 (lot is empty on the 1928 aerial) and 1954 (structure is present on the 1954 aerial); builder is unknown. In terms of historic significance, most individual houses in the study do not qualify for either federal, state or local historic designation. This structure is neither architecturally or historically distinctive (see discussion dealing with historic significance of the study area)

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

Uncertainty exists as to who actually lived in this house during the initial years of the Little Landers colonization. Joyce Hettich believes that it was the William Smythe home. However, research indicates that it could actually have been the home of Harold Champ, Smythe's son-in-law. Champ's house, according to newspaper articles, was one of the first homes constructed within the settlement. Harriet and William Smythe, founders of Little Landers Colony #1, purchased Parcels A18 and A19 for the site of their home and agricultural endeavors. According to early deeds, Harold Champ did not own an acre parcel nor a townsite in the community. However, since he was a relative of Smythe's, it is highly likely that he built on the family acreage. In either case, the extant structure was built on land owned by Smythe and is one of only 6 remaining houses within the Historic Survey area definitively associated with the original Little Landers colony.

## 260 MESA

### 19. SIGNIFICANCE CONT.

As of May 16, 1909, Harold Champ's house had been completed. It was built by J.W. Lewis, the general manager and contractor for the colony. The Champ house was a frame cottage with a massive cobblestone fireplace and chimney, overhanging eaves, a long hall and a front porch (San Diego Union, May 16, 1909). From the description, it is clear that Champ's home was an informal, straightforward Craftsman bungalow; a style of house that was being constructed in suburban developments throughout the country. It had become a sign of upward mobility and had become associated with naturalism and Americanism, projecting images of deeply rooted security and family stability (Gowans 1987:75). The placement and shape of windows, doors, porches and even the structure itself on the lot emphasized a tie with nature, while offering privacy and seclusion. Windows became larger to let in light and fresh air; the result of nearly a century of concern for health. Porches opened the house into its surroundings "as somehow combining the coziness of indoors with the freedom of outdoors" (Stilgoe 1988:102). Doors were often off-set under the porch to provide a family with a sense of privacy.

"Successful mass-produced suburban house design depended upon creating illusions of a spacious lot no matter how cramped the actual one might be . . . . On three sides at least, such a house should imply yard space- front, back and sides" (Gowans 1986:31).

Numerous catalogs available to the suburban owner dealt with this desire for space in different ways. Basic rectangular homes had wrap around porches and back porches accessible from the side. Frequently side gables repeating front gables were used to create a yard facade. Homes sat on their individual lot, perpetuating the rural tradition. Yet because of street alignments, they related to other structure on the street like older urban homes. Individuality was expressed in the selected treatment of house style and the creation of gardens within both rear and front yards. Dozen of magazine writers wrote of the merits of this relatively new style of building, emphasizing its open and natural, yet modern and efficient form that combined city convenience with country-like ambiance. Floor plans and even materials were easily accessible through the mail order catalogs.

The Smythe house was a craftsman home as well. At the July 4, 1909 house warming, The house, not yet completed consisted of a single room with adjoining tents serving as sleeping and cooking quarters. When completed, it "served as a model San Ysidro residence" (Lee 1975:44). Mrs. Smythe held regular Thursday social gatherings at the house: ". . . It was her earnest endeavor to level social barriers and with music, conversation, games, flowers, and refreshments meant to prove that gracious living could elevate what otherwise appeared to be a drab existence" (Smythe in City Homes on County Lanes, #3).

In an article written in 1911, the Smythe house is described as:

". . . In the big fireplace at one end of the room, blaze big logs. There are books aplenty and pictures one loves. There are bunches of holly given us by a child, and the big generous writing table and (blessed thought) time to write. East and north of the bungalow rise the foothills of the Coast Range- a mile and a half south lies Mexico, and, silvering the sunset gleams, the great ocean sparkles five miles west. Little farms dot the lovely valley. Little acres compose the town. The acres, of which each true Little Lander possesses one or two are laid out in narrow strips 100

# HISTORIC RESOURCES INVENTORY

### 19. SIGNIFICANCE CONT.

by 400 feet. One acre brings the modest homes near to each other and prevents loneliness. The kind friend who built this room provided windows north, south and west where we sit and view the kingdoms of this world and the glory of them. . . ."

(L. Judd 1956 "Once Upon A Time")

William Smythe was the founder of the Little Landers Colony #1, existing in San Ysidro between 1909 to 1916. He was known throughout the United States as a journalist, public-speaker, organizer and promoter of the popular progressive back-to-the-land movements. He was the leader of the National Reclamation movement, editor of Irrigation Age, founder of the National Irrigation Congress in the 1890s, founder of three successful colonies prior to the establishment of the San Ysidro colony, (and several after San Ysidro), editor of the San Diego Sun, and author of a history of San Diego. Smythe was influenced by a 60 year tradition that sought to combine the best of city and country life; a movement to rectify the perceived collapse of the social, moral and economic order by developing a new form of living, the suburbs. An entire generation of educated middle class people had been raised with the idea that the borderlands offered the answer to society's ills. By the 1880s, the genre had built "into a flood of articles, books and even poetry that nearly overwhelmed publishers in the 1890s. The literature of the borderland good life mirrored and shaped turn of the century middle class thinking" (Stilgoe 1987:168). Smythe, like other reformers of the day, attempted to establish communities that created family and community ties yet still allowed individual expressions. His promotional brochures, pamphlets and articles were distributed as part of a national campaign to promote his ideals that "it is the family on an acre of land which improves national character". His writing, typical of the day, is dramatic and flowery: exposing the virtues of "a Little land and a living". He believed that a family could gain a livelihood from cultivating an acre of land and that to avoid rural isolation and perpetuate cultural ideals, colonists should live in townsites, separate from their cultivated plots. Neither the idea of separate agricultural plots nor small lot gardening was a new idea. Since at least 1820 these ideas had been generated by numerous reformers. As early as 1857 "half acre" lots were sold demonstrating the adoption of traditional gardening practices to a new sort of settlement arrangement (Stilgoe 1988:89).

Though not as economically successful as Smythe's prose suggest, the colony did have approximately 100 families prior to the devastating flood of 1916. Many families however, rather than being involved in purely agricultural pursuits, owned only residential lots and commuted to the city to earn a living. By 1916, San Ysidro had become a small suburb rather than the Arcadian colony first envisioned by Smythe.

Following the 1918 death of his wife, Smythe left California to promote the Soldier Homestead Program. He also launched another settlement program in the east through the American Homesteaders Society, an organization designed to help working men secure homes in garden city suburbs. Smythe died in 1922 in New York City. (According to Professor L. Lee, a retired historian from San Jose State and an expert on the Little Land movements in the U.S., all of Smythe's personal papers and memorabilia were destroyed in a fire shortly after his death).

The significance of this particular structure lies in the probable historic association with Wm. Smythe, the founder of the Little Landers Colony #1, as well as with its chosen architectural style. It still retains integrity as an example of the Craftsman Bungalow built throughout the county during the early decades of the 20th century.

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original lot 76 (see attached Little Landers Map) was purchased by a Mr. Miller in 1912. An Elmer Miller is listed in the 1930s City Directory, occupation carpenter, it could not be determined however whether this was the same Miller. A review of the 1928 aerial shows that a structure with a pitched roofline was located on this particular parcel; the 1954 aerial shows a structure with what appears to be a Mansard roofline. Based on the overall condition of the house and comparison of the 1928 and 1954 aerials, it is difficult to determine whether or not this particular house is the one seen on the earlier aerial. A review of the City Directories fail to list specific addresses or occupations, thus severely hampering any type of biographical reconstruction for the Millers.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for either federal, state or local historic designation; this structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

### DESCRIPTION

- 7a. Architectural style: FOLK VERNACULAR
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:  
One story, long and narrow house with medium pitch front facing gable and an off set dropped front facing gable over door entry ("shot-gun"). Back of house has a lower gable attachment, suggesting had least one addition to the main structure. Asymmetrical front facade.  
STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: board and batten exterior with horizontal board cornice; wood or cement pier foundation; small, louvered boxed vent under gable. ROOF: composition sheeting; porch roof has "original" wood shingles; undecorated gableboard; exposed rafters. WINDOWS: front window is double hung with single pane in each; plain undecorated surrounding board treatment; side windows are a combination of fixed and double hung. DOOR: plywood and screen; plain undecorated surrounding board treatment. PORCH: open entry porch; roof supports are four 2 by 2 beams; simple molding at capital; three cement front steps to entry; no railing system.

### DESCRIPTION

- 7a. Architectural style: FOLK VERNACULAR WITH POSSIBLE COLONIAL Revival ELEMENTS
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:

(Possibly not the original structure on the lot; informant states that this house contains elements of previously owned house destroyed by freeway construction; informant states that some salvage occurred on the first house during construction of the existing one- possible that some of the elements are older than current construction). One story cottage with side facing low pitch hipped gable and an extended hip gable over front porch entry ("hall and parlor configuration"). Symmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding; louvered box vent under hipped gable. ROOF: composition shingle; exposed rafters; plain undecorated gableboards; two decorative beams at hips. CHIMNEY: side, new brick. WINDOWS: set of windows on either side of door, horizontal fixed; plain surrounding board trim; security bars over windows/door; side windows double hung. DOOR: front facing center, glazed with 10 lights; plain surrounding board trim. PORCH: open entry porch with four hollow metal doric columns as porch supports; portico has curved boxed underside; 2 front facing cement steps.

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story house with low pitch front faacing gable and shed extension roof to one side ("Hall and Parlor"). A separate, dropped shed roof extension has been added to the rear of the house. Below the main structural gable is a drop low pitch gable roof covering the entry.  
STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: aluminium lap siding with aluminum corner boards.  
ROOF: composition shingles; exposed eaves, plain gableboard (roof appears to be collapsing).  
CHIMNEY: none. WINDOWS: 2, unevenly placed on either side of front door metal sliders with security bars; narrow plain board surrounding trim. DOOR: front facing central door under gable; glazed with 2 rectangular lights on top/ 1 large wood inset panel on bottom. PORCH: open entry: 4 stick supports, stick cross beam; dropped, low pitch gable roof over door entry; 2 by 2 open railing; 3 wood side steps to wood stoop area.

### DESCRIPTION

7a. Architectural style: CRAFTSMAN BUNGALOW

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story bungalow with multiple roof lines including a low pitch front facing gable, shed roof extensions and gables over enclosed porch and above at least 1 side window. Asymmetrical front facade. Extremely dense vegetation/foliage made viewing of house difficult to impossible (front photo was impossible to take). STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: combination lap and flush siding; shingle skirt around entire house from foundation to approximately 3' above ground; boxed lattice vent under main gables. ROOF: composition shingle; ends of gable slightly flared; exposed rafters, plain gableboard; simple, long stick knee braces at gable ends. CHIMNEY: central brick with thin brick cap. WINDOWS: combination of long fixed panes with sash bar arrangement of 3 small lights on top/ 1 large light on bottom, long narrow double hung, and long, narrow fixed with vertical lights; all have wide surrounding board trim with lintels slightly flared. DOOR: can't see. PORCH: totally enclosed, full extension under dropped, low pitch gable roof; solid walling system from ground level to above porch floor is shingled; tapered wood piers at each end; 3 side facing cement stairs with iron rail to door (door is covered by thin shed roof overhang).

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original acre lot A12 (see attached Little Landers Map) was purchased by a Mr. McIntosh in 1910 who also owned Parcel 63 at 109 Hall. According to Joyce Hettich (1989: p.c.) this particular house was built by a Mr. Cruthers around 1915. When the Cruthers divorced, Mrs. Cruthers was given the house and associated acreage. She ran a nursery on the site until she was killed crossing the railroad tracks (no date for her death). The Cruthers also owned the Hettich property and several others within the study area. A review of the City Directories list a Alva Cruthers as a school teacher in 1911 and 1912. There is no listing for a Mr. Cruthers.

### DESCRIPTION

7a. Architectural style: FOLK VERNACULAR

7b. Describe present physical description of site or structure; describe major alterations from original condition:

COMPLETELY REDONE/IMPOSSIBLE TO TELL WHAT THE ORIGINAL STRUCTURE LOOKED LIKE.

One story rectangularly-shaped house with a front facing low to medium pitch gable and a dropped, off-set low pitch gable addition on the front; side entrance porch under principal roof.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco. ROOF: composition shingle; undecorated eaves fascia and gableboard. CHIMNEY: none. WINDOWS: metal sliders with security bars.

DOOR: side entrance, door covered with security bars. PORCH: partial side porch under principal roof with a second smaller side porch off front addition; porch supports consist of 4 square 4 by 4 posts with simple molded base and capital; 3'high open vertical board railing system; same decorative open-slat system (on a smaller scale) used along top of porch; tops of columns rest on bottom of this element; knee braces are spindle-work, 3/4 wheels; 2 cement steps to porch.

Associated out structures, garden lattice work, large wood planter boxes, and brick walk-way are likely recent additions.

### DESCRIPTION

- 7a. Architectural style: COMMERCIAL, SPANISH ECLECTIC w/ FLAT ROOF
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:

Long rectangularly shaped, 1 story commercial building complex (currently used as 5 separate businesses) has a flat roof with simple angular parapet extensions and a very plain appearance. It is possibly three separate buildings abutting each other. From left to right they are described as follows: corner building is smooth stucco box, flat roof with front entry, slightly inset under main wall system. Large inset plate glass window covered with awning at street level. What appears to have been a fixed horizontal window half way up between roof and focal window is now boarded up. Second building to the right is boxlike with a low, centered, angular parapet: inset, front facing glazed door under main front wall, front facade includes 2 inset windows with 3 fixed panes above/ a boxed horizontal window half way between wall and entrance is boarded up. The largest of the 3 continuous buildings is stucco with a simple stepped parapet extension at the center and ends. Windows are large plate glass with thin stucco sills; doors are front facing and inset under principal wall.

NONE OF THESE BUILDINGS HAVE ANY HISTORIC ELEMENTS.

### DESCRIPTION

7a. Architectural style: Spanish Eclectic

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story rectangularly shaped, flat roof library building. Symmetrical front facade with arched front focal windows on either side of a recessed, central entry. Plain in overall appearance.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco with sets of 3 tiles placed at corners at top of wall extension; small vertically shaped vents centered above each window. ROOF: flat with slightly parapeted walls and gentle curve at centers; roof tile slopes from roof at either side of curved parapet; wall corners extend above roof line and are blocked and stucco capped (identical to chimney). CHIMNEY: exterior, side; stucco, blocked with thin stucco cap; no extending chimney vents or decorative embellishments. WINDOWS: 2 inset, front facing focal windows; semi-elliptical arches with stucco band surrounding trim; top half is small multi-light (19), bottom contains 4 vertical casement windows; side windows are smaller but contain some theme. DOOR: front facing, recessed; semi-glazed with large single pane on top 2/3's; similar side lights. PORCH: centered entry porch with dropped medium pitch tiled roof; arched, stuccoed entry; low stucco wall has been added to front to enclose entry way (originally entry was open with 3 front facing cement stairs to door).

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

From 1909 until 1924 as part of the original Little Landers settlement, a church and library had been housed in a building within the designated park area. In May of 1924, Frank Beyers, described as "a capitalist of San Ysidro and Tijuana, Mexico with a long list of benefactions in his community, offered to give \$8,000.00 for the construction of a permanent library branch (New Notes of California Libraries Vol 20:1:28). Mr. Beyers owned considerable property in San Ysidro and the Gold Room Casino and Restaurant in Tijuana. In addition to owning a large dairy, Rancho Lechuza located west of the study area, Beyers built and owned a home on Hall, donated money for the construction of the community church, and quit claimed title to the civic center, located in the park. A major street in San Ysidro is currently named after this man. Local residents nicknamed him "Booze Beyers"; lore has him associated with both the glamorous and seamy side of 1920s gambling and bootlegging.

## HISTORIC RESOURCES INVENTORY

### SAN YSIDRO LIBRARY

#### 19. SIGNIFICANCE CONT.

In making the offer to fund the construction of a library, Beyers stipulated that the building had to be located on the Boulevard, that it have a smoking room for men, that no gambling occurred inside its wall, and that his name would appear on the building (NNOCL Vol 19 #3:211).

A library board headed by Mr. Goetz of the San Ysidro Irrigation District was formed with the idea that once completed, the building would be deeded over to the county. Mrs. Eleanor Hitt, County Librarian, wrote to Milton Ferguson, State Libraries, in May of 1924 requesting: "pictures and plans of some of the branch buildings costing \$7-8,000 . . . including furniture " (letter on file, County Library). (Note: The California State Library was contacted in an effort to locate the original plans for this building; only the three photographs included herein showing the completed building were found). The library was formally opened on October 16, 1924; the building had the unique distinction of being the first branch building owned by the county and the only library in the country to have a smoking room for men; Beyers insisting: "that most men wish to smoke while they read" (NNOCL Vol 19 #4:403).

Though lengthy, the following passage describes the results of Beyer's "public spirited generosity":

. . . "On the evening of October 16, the new library at San Ysidro was formerly opened with a delightful reception given by the people of the community in honor of Mr. and Mrs. Frank Beyers, the donor of the building. . . . The library which was erected and finished by Mr. and Mrs. Beyers at a cost of about \$12,000 has several unique features. Besides the usual library furniture are 8 or so large upholstered chairs and an attractive floor lamp. When these comfortable chairs are drawn up by the readers around the fireplace in the evenings the atmosphere is more like that of a home in which the custodian is hasten than like that of a public library. The gift of Mr. Beyer was wholly unsolicited and was most graciously bestowed. In addition to the building and furniture, Mr. Beyer bought over \$500 worth of books selected by the County Library to form a permanent reference collection for the library. He has also provided for the upkeep of the grounds for a long period of years. The only requests made by Mr. Beyer in connection with his gift are that the library shall be open every evening except Sundays and holidays, that smoking shall be allowed in the room provided for that purpose, and that the Police Gazette be kept on the reading table"

(New Notes of California Libraries Vol 20 #1 Jan 1925:28)

Final clarification of the title to the library building was achieved as a result of a title suit against the San Ysidro Irrigation District by the County of San Diego. The county's title to the building was finalized on May 22, 1957. In 1983, the library was closed for remodeling and expansion, including the addition of an atrium. However, the exterior of the original structure was only slightly altered (see attached 1924 and 1989 photographs).

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

This two story building, currently used as a residence hotel for men, is the oldest extant structure in San Ysidro, and as such, is perhaps the most significant building within the study area.

From 1909 to the present the building has served as a hotel; housing at first prospective settlers of the Little Landers community and the growing tourist market. Prior to 1909, it was the private home of the George Belcher family; owners of the property from 1901-1909 (Deed Book 463:1). Between 1874 and 1901 this area was owned by L. Judkins (1901), Stern/Bowman (1888), J. Quinn (1887), W.B. Spence (1882), Dranga (1882) and J. Platt (1874) (Deed Books 1874-1905). Although no mention of an existing structure is mentioned on any of the earlier deeds and no buildings are shown on early maps, there exists the possibility that the house predates the 1901 Belcher purchase of the acreage. The building may have originally been associated with the 1888 settlement

133 SAN YSIDRO BLVD

SAN YSIDRO HOTEL

## 19. SIGNIFICANCE CONT.

of Tia Juana, a community of at least 21 buildings promoted by the real estate firm of Hart and Stern. Although the town of Tia Juana, destroyed in the flood of 1891, was located further south than the Little Landers Subdivision, local homesteads are noted as occurring along the railroad line that passed directly in front of this building. A recent article the L.A. Times (November 12, 1987) suggests that the hotel is possibly a pre-fab and a twin of the Heath-Davis House in San Diego (documentation was not located to verify this statement).

By 1907, there was a concentrated effort to bring people to southern California, resulting in thousands of tourists and colonists taking advantage of low fares into the area (Sun November 1907). The promoters of the Little Landers Colony #1 selected the Belcher farmstead as the site of their development. An "ideal location had been selected at the site of the old Belcher Ranch in Tia Juana River Valley where fertile soil was combined with ample sources of water and proximity to the city" (Lee 1975:31). At the time only two families were living on the tract. "The old ranch adobe was converted to headquarters and the Belcher homestead became the San Ysidro Inn. Five floored tents were erected to serve as dormitories while homes were built" (San Diego Union June 18, 1909)(see attached historic photograph). During the early teens, J. Thomas and M. Dalley served as the hotel keepers for the Little Landers Corporation. By the 1920s, C.A.Schultz had taken over the hotel (San Diego Directory).

Like other reformers of the era, the Little Landers founders sought to meld what was perceived as the best qualities of town and country into their new community. The Belcher home was a typical rural vernacular building. "The traditional American farmhouse represents plenty, simplicity, virtue, and beauty; qualities some reformers suddenly found lacking in the homes of urban dwellers" (Gowan 1987:31). Converting the home into an inn did not alter this visual effect. To the prospective colonist arriving by train, the building maintained its rural character, reflecting a traditional value system, the re-establishment of pre-industrial values.

"Pioneer and farm families had long built symmetrical, white painted houses as soon as circumstances permitted. Such houses announced the triumph of humanity over forest and prairie wilderness . . . . The attachment to such stand-out buildings survived long after the pioneers. . . ."  
(Stigoe 1988:196).

Pictorial evidence of the structure suggests that although the exterior is deteriorated and in need of immediate care, the facade of the Hotel has changed little since 1909. The only known historic photograph shows the building alone, facing the railroad tracks. The structure represents San Ysidro's rural past; over time, infilling as occurred has the commercial strip of San Ysidro Blvd developed in response to the growing population of the town. Immediate stabilization or restoration of this structure is highly recommended.

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original parcel (Lot 109, see attached Little Landers Map) was purchased by H.W. Hamilton in 1909. Because this particular house is set back off of San Ysidro Blvd, it pre-dates the commercial development that occurred between 1920-1928; the style of this house is very similar to the San Ysidro Hotel, implying that it could have been built at the same time. However, research suggests it is most likely one of several extant vernacular structures built during the early years of the Little Landers Colony. Hamilton moved from Hemet in 1909 and opened up a small store and watch repair near the old hotel. In 1911 the City Directories list him as a shoe repairman and the postmaster; in 1925 Ruth Hamilton is listed as postmaster.

In terms of historic significance, this house is most probably associated with the Little Landers. However, extensive archival research coupled with interviews failed to document the actual date of construction, biographical data of the Hamiltons or any additional local lore associated with this building.

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

Historically known as the San Ysidro Commercial Company (see attached historic photograph), this two story Spanish Eclectic structure was designed in 1927 by Louis Gill, the nephew of Irving Gill. Gill, born in New York in 1895, graduated from the Architectural University of Syracuse in 1911. Between the years 1911-1914 he worked as a draftsman and later (1914-1919) became a partner with his uncle, Irving Gill (McCambridge 1973: n.p.). Between 1920 to the late 1930s, Gill drew plans for numerous churches, hospitals, commercial buildings, apartments and parking garages in the San Diego area. Gill was also associated with other San Diego architects in major public building construction, including the County Administration Building. After 1945, he became active in civic activities in San Diego and in the AIA (Gebbard 1983: n.p.).

## HISTORIC RESOURCES INVENTORY

145-147-149 SAN YSIDRO BLVD

FERRETERIA INTERNATIONAL HARDWARE SUPPLY

### 19. SIGNIFICANCE CONT.

Gill had extensive knowledge of traditional Mexican architecture. He was also an early advocate of the Aikon Lift Method, whereby walls with windows and doors in place were lifted up with the super structure. This was a quick and cheap form of construction (McCambridge 1973:n.p.).

Gill also designed the Congregational Church on Hall in 1924 for the community of San Ysidro. In 1927, he designed this structure, planned as an apartment building and store for Mr. R. W. Smith (see attached historic plans; Architectural Drawing Collections, U.C.S.B.).

Following World War I, both the homestead ideal and back-to-the-land movements that had swept the U.S. had been replaced in the American psyche. The shortage of American labor from World War I and the flu epidemic impacted the nation as a whole. San Ysidro, as a border town saw a steady increase of immigration populations arriving to fill the void. In addition many laborers and entertainers who worked in Tijuana in the casinos and race tracks lived in San Ysidro, crossing the border daily to and from work. An urban-industrial transformation was sweeping the nation, reaching well into the suburbs and outlying communities. San Ysidro was no exception. It was in the early 1920s that San Ysidro definitely began to lose its agricultural character. An engineer's survey of 1922 noted work would be done to provide fire protection for what had become largely a residential community (Lee 1975:47). In 1923 "there was built or under construction in the town more than 100 dwelling houses, indicating a growth in population of at least 500" (San Ysidro Irrigation District 212:6 #2). During this decade of growth, community focus gradually changed to cater to the tourists and commercial needs of an expanding population. The economy of the area expanded and diversified. Both a wider range of occupations and available services are evident in the directories of the 1920s; the economy of the area expanding and becoming more diversified.

In addition to its importance as a Gill designed structure (one of two remaining in San Ysidro), the Commercial Company, located in what by 1927 was becoming the tightly grouped commercial core of San Ysidro, symbolizes the expanding economic needs of the community. Restoration of this structure to its 1927 form is highly recommended.

7b. Describe present physical description of site or structure; describe major alterations from original condition:

Large two story rectangularly shaped building, flat roof, originally used as a hotel; currently used as shops and apartments. Front facade has been entirely redone with a Spanish motif. Symmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: stucco front, narrow irregular length channel siding along sides; large stucco corner blocks with slight angular relief extend slightly beyond roof line; concrete block skirt along bottom 2 1/2' of front. ROOF: flat, can not see covering; no eaves; front facade roof line slants in toward roof top (shed-like appearance), tile covered. Side roofline flat with plain board along top. CHIMNEY: side, stucco. WINDOWS: 2nd story front- double hung on either side of balcony, 12 lights on top/ single pane below; inset with narrow board surround; iron grill work railing. 1st floor front- large horizontal plate glass with extremely wide stucco lintel. Side windows- irregularly spaced, all appear to have been replaced. DOOR main door set under front wall with flattened arch entry surrounded by extremely wide flattened arch stucco relief. 2nd story center balcony with grill work railing, massive stucco brace relief; opening into balcony is segmental arch with wide molded arched detail serving as surround (edges of arch flared).

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

This two story hotel is located within what historically was the small, tightly grouped commercial district of San Ysidro. This structure does appear on the 1928 Erickson aerial, but does not appear in the San Diego Directories until 1935 (when E.J. Herbert is listed as the manager). No records of the contractor or the architects were located.

As of 1928, the original one acre lot (A31), owned during the Little Landers period by Parker, had been divided into nine smaller lots (Buckley Map, 1928). Several of the lots remained empty as of that date (1928 aerial). When first constructed, the La Nola was adjacent to the Bijoi Theatre, a building that no longer exists and directly across the street from the extant Commercial Building constructed in 1927 (Dixon 1989, p.c.). It is highly likely that both these structures and others along San Ysidro Blvd correspond in time to the construction of Aqua Caliente in Tijuana and residents anticipating a further increase in visitor traffic in the area.

# HISTORIC RESOURCES INVENTORY

148 SAN YSIDRO BLVD      LA NOLA HOTEL

## 19. SIGNIFICANCE CONT

A brief article from the San Diego Sun supports this idea:

San Ysidro Port of Entry . . . Poultry is a thriving industry here as in Chula Vista. Truck gardening is likewise profitable and is cultivated year round. Its permanent population is estimated at 1200. Many new homes and business buildings have been constructed recently . . .

(Sun 2-28-28)

As was typical of main street development in general, the La Nola abuts the sidewalk and the current 60' alignment of San Ysidro Blvd. (Prior to commercial construction along this side of the boulevard, San Ysidro Blvd (40'), San Diego Southern Railroad easement (50') and the Little Landers Road (40') encompassed 130' from the north side of the street). Only the front facade of the building contains decorative, stylistic elements. Side walls on linear developed main streets "are almost always treated in an elementary, utilitarian manner" (Langstreth 1987:17). In the case of the La Nola, the sides and rear are simple, lapped siding. According to the current owner the front facade has not been altered (Zug 1989: p.c.). Like the El Toredor Motel, constructed almost two decades later, the La Nola was built in the Spanish Revival genre. Although two stories and blocky in appearance, Spanish Revival elements were used on the front. The selected elements are more elaborate than those used on the Spanish Eclectic commercial buildings in the area.

The significance of this building lies in its use as a hotel for at least the past 60+ years; its style and location catering to increased traffic in the city of San Ysidro and the thriving gambling industry in Tijuana, Mexico. (At least two "auto camps" or "motor courts" were constructed in the 1920s to serve the same tourist population during the decades preceding World War II).

18. Related features: complex contained the "first" swimming pool in San Ysidro; many of the residents would come down to the motel complex to see the "matador and bull" painted on the bottom of the pool (personal communications, 1989)

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The site of this Spanish Eclectic, 30-unit motel complex was originally part of a large tract of land owned in the late 1880s by the Tavan family, early settlers of Tia Juana and merchants on both sides of the border. In 1920, the parcel was sold to a W. Christoferson (Deed Book 1719:408). However, as of 1929, the lot remained empty (San Diego County 1929 aerial). On January 28, 1948, the 1.66 acre lot was purchased by Mr. Tony M. Silva from O.K. Campbell (Deed Book 2646:52). The motel was constructed the same year. Shortly after completion, fire destroyed the main building (Hettich, p.c. 1989). It was subsequently rebuilt. On June 6, 1949, Mr. Silva (DBA El Toreador) purchased a liquor vendor license from Milton and Ruth Hall for \$125.00 (Deed Book 3219:244). Advertised in various issues of Hotels and Motels of San Diego brochures of the 1960s and 1970s, El Toreador offered daily, weekly and month rates for its rooms, suites and kitchenette units, TV, radio, a heated pool and a restaurant/bar for its patrons.

## HISTORIC RESOURCES INVENTORY

### 631 EAST SAN YSIDRO BLVD "EL TOREADOR" MOTEL COMPLEX

#### 19. SIGNIFICANCE CONT.

This motel does not meet the 50 year criteria for potential National Register nomination. Further, as discussed below, it is not unique as a resort architectural style nor is it reflective of either the original Little Landers community intent nor the post World War I Hispanic growth in the area. Rather, it was built to cater to the tourist market. From the early 1950s, the border crossing has become the busiest between the U.S. and another country.

As early as the late 1800s, corresponding with California's mythical creation of its quaint, romantic Hispanic roots, tourists made visits to the Mexican side of the border. Tijuana at this time and until 1933 with the naturalization of all foreign owned properties in Mexico, was dominated by American capitalists. Tourism increased with the 1916 opening of the race track and was further stimulated by the 1928 opening of Aqua Caliente. Being located adjacent to the International Border, San Ysidro in the twenties and thirties had a few "auto camps" and "motor courts" and two small hotels that catered to the day visitor and thriving gambling industry in Tijuana, Mexico (San Diego Directories). Hollywood stars, for the most part unaffected by the Depression, comprised a good deal of the visiting public. Once casino gambling was outlawed and alcohol again legalized in the U.S., dog and horse racing, bull fights and shopping continued to attract tourists across the border.

From an economic point of view, Spanish stucco and frame as a style, became increasingly popular in Southern California after World War I. Because of the rising cost of lumber, it was simply cheaper to build. In Southern California thousands of small single family homes and commercial buildings were built in this style.

However, it was not purely economic reasons that perpetuated the popularity of this style for buildings associated with leisure activities. Architecturally, Spanish architecture was (and still is) a favored style for resorts because it creates a visual metaphor of an "easy going, relaxed, fun-loving style of a semi-tropical people" (Gowans 1987:108). Exteriors were intentionally designed to reflect a "holiday or foreign atmosphere". From the early 1800s, when Americans began trading and moving into Mexican occupied territory, "Mexican" was used derogatorily to connote laziness, corruption and frivolity. This is expressed time and again in early correspondences. However, for the past 100 years, even during the Spanish Civil War for purposes of promoting real estate, in Florida, California, New Mexico and Hawaii, Spanish Eclectic building styles became associated with the exotic, with "fun, sun and leisure".

In California, the missions had been forgotten until the last decade of the 19th century, "when they were discovered as a native source for the Colonial Revival which swept the nation following the Philadelphia Centennial exposition" (Kirker 1986:7). As early as the 1890s, Spanish Revival (Mission) became part of a romantically and falsely viewed past of a pastoral existence that was expressed in the arts and literature of the period. "The western romanticists had far greater freedom in their dedicating task of fabricating the legend of Southern California than was enjoyed by either the northeast or southern myth makers: (Kirker 1986:7).

The Spanish style received further impetus when the Santa Fe and Southern Pacific Railroads adopted this architectural genre for stations and railroad-owned resort hotels (MacAlester 1984:410). The achieved effect created a contrast of the mythical, dreamy, romantic Latin and the hard working, stern Anglo (Gowans 1987:108). Spanish Eclectic became a perfect style to promote leisure activities.

## HISTORIC RESOURCES INVENTORY

### 631 EAST SAN YSIDRO "EL TOREADOR MOTEL"

#### 19. SIGNIFICANCE CONT.

The disparity between the realities of provincial architecture and the myth of a splendid Adalusian manorial building tradition has become more obvious in the past few decades as historical research and archaeological investigations as well as social sciences focus on separating fact from historical fantasy. However, by the 1920s, the Spanish Revivalists set about creating a past even more legendary than the one manufactured by the earlier Mission Revivalists (Kirker 1986:126).

Decorative elements were freely taken from Moorish, Byzantine, Gothic and Renaissance Spanish inspirations as well as a board area labelled "Mediterranean" which even included North African styles. The resulting style was meant to symbolize California's heritage. Following World War I, fear and insecurity swept the nation. "Tradition" again was in vogue. In California, this was reflected in the popularity of the style for homes, as well as businesses, places of worship and recreation areas.

By the 1920s, Hollywood's association with fantasy and luxury and the adoption of the style for movie sets and private homes reinforced the romantic ideal. Through the 1920s and into the 1930s, Spanish Revival was the ideal style for resorts and to a degree movie theatres.

The construction of El Toreador Motel, in 1948 (well passed the "hey-day" of Spanish Revival) and the re-revial of Mediterranean styles in the 1980s exemplify the lingering power of romanticism. However, typically built and run by persons whose social and cultural upbringing was antithetical to everything Spanish, perhaps it even exemplifies subtle stereotypical overtones . . . the Spanish Revival architecture used for resorts reflecting what Americans perceive Hispanic culture to be rather than understanding its heritage.

Older members of the San Ysidro community were interviewed to determine whether or not the El Toreador was considered by them as "historic". Its only significance is perhaps at the local level. Located on the main boulevard, El Toreador became a well-known landmark for post World War II residents in San Ysidro. At the time of construction it was the largest and most visible motel in the area. It was the first place in the community to have a swimming pool; the tiled toreador on the pool bottom became a local curiosity (the pool has recently been filled in); it was the first motel in San Ysidro to use neon signage extensively; and according to local lore, Hollywood movie stars, including Jay Silverheel and Buster Keaton frequently stayed here. None of these reasons, nor the mere opinion that as a style it is visually appealing are considered strong arguments for preservation and inclusion on San Diego's Historic Sites Board list of locally significant properties. Within the study area, there are at least two simple, flat topped, Spanish Eclectic auto courts built in the 1920s and early 1930s and two hotels which predate the El Toreador. El Toreador, however, is the only motel in San Ysidro dating from post World War II built with the decorative details described in the previous section of this form.

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

Art Deco became common in public and commercial buildings in the late 1920s and -30s; many of the movie houses and theatres built during this time period used Art Deco styles to make the buildings stand out: ". . . at the end of the 1920s, both the baroque and the exotic gave way to the simplified lines and colors of Art Deco" (Naylor 1955:25). Many structures in the 1925 Paris Exposition were Art Deco. By the 1933 Chicago Exposition the form had evolved into an American form. In Southern California, particularly in Los Angeles, the style was strongly influenced by the Mission style and Hollywood's attraction to the new and different. By the late 30s the style changed from vertical and zig-zag to more streamline effects.

## HISTORIC RESOURCES INVENTORY

755 SAN YSIDRO BLVD      "THE INTERNATIONAL BUILDING"

### 19. SIGNIFICANCE CONT.

The original use of the building is unknown, although a single informant stated that prior to World War II a theatre was located there. In an effort to trace its possible use as a theatre, newspapers, directories and film libraries were checked (including the San Diego Theatre Owners Association, Academy of Motion Pictures Library, the Goldberg Film Transport, and the Breakwater Film Distributors); no records were found to indicate that films were sent to this location.

The lack of definitive information regarding the original use of this building is compounded by the possible confusion in the City Directories for San Ysidro. The 1930 Directory lists "International Commercial Co- J.N. Llanos manager" and an "International Garage". By 1934 neither is listed. 1920/1925 photographs for the border area however show a wood frame building with "International" written across the side wall. The 1932 Sensor photos of the custom house under construction show a wood frame as the "International". (Based on Directory research the use of the word "International" in part of a company name is not unique to this particular building).

The historic significance of this structure lies in the architectural style. It is the only "art deco" building in San Ysidro, and one of the few remaining in the entire City.

### DESCRIPTION

- 7a. Architectural style: FOLK VERNACULAR w/VICTORIAN ELEMENTS (bays, classic columns, Queen Anne window design)

- 7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story cottage with medium pitch cross gables; numerous additions to both the side and rear of the structure; dropped medium pitch gable roof over door entry. Asymmetrical front facade.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding. ROOF: composition sheet; exposed rafters; plain undecorated gableboard; at the apex of both front facing gables, a jig-saw design element has been added for accent (keystone). CHIMNEY: cement/cobblestone extending from the current center of the house. WINDOWS: each side of the house has different sash bar arrangements reflecting constant change/alterations to the structure; elements include double hung with transom, double hung with no transom, diamond pane, clear and colored glass; all windows have undecorated plain board trim. The three main front windows (left of the door) are fixed with 4 lights on one side, single pane on other side (Queen Anne element put in sideways); to the right of the door is a set of casement windows with an irregular sash bar division and a set of ribbon windows.

DOOR: front center, partially glazed with 4 decorative panels on top/ 4 rectangular wood panels on the bottom. PORCH: front entry porch; open boxed under gable; 2 slender wood doric-like columns serve as porch support; two front facing cement steps to entry.

8. Construction date:

Estimated: 1910

9. Architect: \_\_\_\_\_

10. Builder: \_\_\_\_\_

Public Works Project \_\_\_\_\_ Other: \_\_\_\_\_
17. Is the structure: On its original site?: ☒ Moved? \_\_\_\_\_ Unknown? \_\_\_\_\_
18. Related features: lots of older vegetation on lot

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original lot, designated as acre lot A3 (see attached Little Landers Map) was purchased by C.J. Young in 1910. Young had originally lived in San Francisco, importing Irish linen. However the 1906 earthquake killed his wife and destroyed his business. Young was typical of many of the Little Lander colonists, elderly and with limited available cash. After the death of his wife, at the age of 70, Mr. Young moved to San Ysidro with a total of \$350 in cash. After five years, by doing carpentry work in the area, he was out of debt; his land and personal property assessed at \$2,500.00 (Lee 1975:42). Young became Director of the Irrigation District and for a time managed the Colony's market in San Diego.

## HISTORIC RESOURCES INVENTORY

### 117 SEAWARD "YOUNG'S HOUSE"

#### 19. SIGNIFICANCE CONT.

C.J. Young was one of the original incorporators of the Little Landers Colony; at the colony he married Dr. Blackshaw's daughter. In 1912 the statue of General Grant stood on Young's porch until a pedestal could be built for it:

" . . . George P. Hall, our Horticulturist asked for General Grant and two lady statues to be set up in our Park. They were brought out, the two ladies were set up in the Park near where the Irrigation District office now is, and General Grant was laid on the front porch of Youngs home at the head of Park on Seaward Ave. until a pedestal was a built to set it on Later when a pedestal was ready a ceremony was held to dedicate Grants statue which was set up with his arm pointing to Mexico and stood there until 1918 when during the War came a great scarcity of copper came about, so the residents got together and tore down General Grant and sold the copper for the war effort. The two ladies known as Mrs. Eddy and Lydia Pinkham were taken down later."  
(L. Judd September 30, 1955).

The potential historic importance of this structure lies in its early construction date (associated with the original Little Landers settlement) and its association with C.J. Young, one of the incorporators of the Colony and head of the Irrigation District.

### DESCRIPTION

7a. Architectural style: CRAFTSMAN

7b. Describe present physical description of site or structure; describe major alterations from original condition:

Two story bungalow with medium pitch side facing gable, a front facing, full width, medium pitch gabled dormier, and a full extension porch. Porch entry is off-set, giving the structure an asymmetrical front facade. Principal roof extends over porch to give a side "salt-box" appearance. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding. DORMIER: boxed lattice vent under dormier gable; windows are 2 sets of 2 double hung, rectangularly shaped panes; plain board trim with lentils slightly flared. ROOF: composition sheeting and shingles; large decorative knee braces at 3 points under gables; exposed rafters; undecorated plain gableboard. CHIMNEY: 2 brick chimneys on either side of house. WINDOWS: metal sliders and 1 single pane, double hung window to the left of the door; tall thin double hung window with flared lentils to the right of the door; rectangular side windows; two small high windows on either side of chimney. DOOR: off center, partially glazed with oval glass panel inset. PORCH: full porch contained under principal roof; solid lap-sided porch balustrade to approximately 3' above ground level; 2 massive, tapered wood supports set on wood piers; 3 front facing wood steps to entry; wrought iron railing system along stairs.

18. Related features: older vegetation (palms)

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original lot designated as acre Lot A5 (see attached Little Landers Map) was purchased by Mrs. Rundell in 1911. She was one of two sisters who moved into the Little Landers colony (Little Landers Record Books). Construction of the house was started in 1911 and completed in 1912 (builder unknown). Mrs. Rundell left San Ysidro and returned to Indiana when her son committed suicide. A Roy Haigler owned the house in 1955.

A review of the City Directories fail to list specific addresses or occupations, thus severely hampering any type of biographical reconstruction for the Rundells.

The historic importance of this structure lies in its early construction date (associated with the original Little Landers settlement) and its architectural style (it is the only remaining 2 story Craftsman in the study area).

### DESCRIPTION

- 7a. Architectural style: FOLK VERNACULAR
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:  
"L-shape", one story structure with low pitch cross gable. Asymmetrical front facade.  
STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: one story portion of structure has new lap siding with thin corner boards; square metal vent under gable. ROOF: composition shingle with exposed rafters; plain, undecorated gable board. CHIMNEY: none. WINDOWS: front (left) set of 2 single panes in wooden slider with plain board surrounding detail; window in porch is a fixed, single pane. DOOR: side entrance; wrought iron screen obscures door.  
PORCH: located under principal roof; single 2 by 2 porch support; 1 front facing cement step to entry.

Additions to original structure include modern 2 story stucco apartment (garage with upper apartment). Original structure contains little/no remaining historic integrity.

8. Construction date:

### DESCRIPTION

7a. Architectural style: CRAFTSMAN

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story "L-shaped" bungalow has a low pitch cross gable roof line with a dropped low pitch front facing gable roof and trellis work over full front porch; a trellised porte cochere roof extends to the right of the house-giving an asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: alternate width lap siding; boxed slat vent under gables. ROOF: composition shingles; moderate to wide eave overhang; plain eaves fascia and gableboard on main house; gableboard along porch roof rake is arched. CHIMNEY: side, exterior brick. WINDOWS: 1 window on either side of centered door; doublehung- top pane has 9 light pattern (sash division at edges emphasizes horizontal lines)/single pane below; plain wide surrounding board trim; sill extends slightly beyond opening. Side windows are smaller than front windows but are double hung with same sash pattern and surrounding trim; all windows appear to be original. DOOR: center front partially glazed, plain surrounding board trim; screen door. PORCH: full, open front facing porch; porch covering is a centered low pitch front facing gable roof with a trellised roof extending on both sides; roof gableboard is arched and rests on trellis; two brick piers located at each end of porch extend from ground level to approximately 2' above porch level; a third pier is located at the end of the porte cochere; 4 clustered 2 by 2 sits on each pier and connect with trellis; 3 cement side stairs to porch.

6. Present Use: residence Original Use: residence

### DESCRIPTION

7a. Architectural style: CRAFTSMAN BUNGALOW

7b. Describe present physical description of site or structure; describe major alterations from original condition:

Structure is a one story bungalow with a front facing, low pitch gable roof and a dropped, offset roof over the porch entry. Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: lap siding with channel siding under porch gable; small lattice vent under main front facing gable. ROOF: composition shingle; undecorated gableboard. CHIMNEY: none. WINDOWS: window treatment difficult to observe; main front window has a fixed, single pane with a sash bar pattern of 2 lights on top/ a single pane on the bottom. Two narrow, vertical fixed windows are located on either side of the door (sash bar pattern of 2 lights on top/ 1 on the bottom). Window to the left of the door is fixed (sash bar pattern of 4 lights on top/ 1 on the bottom). Surrounding window treatment consists of plain undecorated board. DOOR: slightly off-set; partially glazed with 4 vertical panes at the top/ 3 wood panels on the bottom; screen door has been added to original configuration. PORCH: semi-enclosed, recessed half porch with lap siding along solid railing system; two cement steps to entry door; porch supports consist of untapered 2 by 2 beams.

8. Construction date:

Estimated: 1916-1928

### DESCRIPTION

- 7a. Architectural style: SPANISH ECLECTIC WITH MULTIPLE ROOF PLANES
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:

Combination one and two story building with multiple roof planes including: a low pitch, front facing gable, a flat roof, and a hip roof on the rear second story. Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: cream stucco with fake rock skirt around bottom 3' of the house's front; clusters of three drains midway below gable and directly under flat roof edge. ROOF: composition shingles with tile along hips and ridge; front of flat roof is slightly parapeted; exposed rafters; no overhang at gable; stucco rake relief. CHIMNEY: none. WINDOWS: inset, fixed parabolic shaped main focal window; rock facade used as wallskirting frames window; other two front facing windows (associated with the flat roof portion of the house) are inset rectangular with fixed panes, sash bar arrangement 4 horizontal lights on one, 2 irregularly spaced horizontal lights on the other. DOOR: offset to side of gable; solid wood. PORCH no porch per se; dropped stucco/tile shed extension over door.

8. Construction date:

### DESCRIPTION

7a. Architectural style: SPANISH ECLECTIC WITH FLAT ROOF

7b. Describe present physical description of site or structure; describe major alterations from original condition:

2 story rectangularly shaped, flat roof apartment building. Symmetrical front facade.

STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: white stucco with 6 diamond-shaped tiles aligned above each of the bottom 2 windows; 4 circular drains at 2nd floor line and below roof.

ROOF: flat with slight parapet at corners and higher low pitch triangular central parapet.

CHIMNEY: none. WINDOWS: (3 on 2nd floor, 2 on 1st floor, 1 on each side of door) inset double hung with single pane; wood sills extend slightly beyond window opening; awnings over side windows. DOOR: center, front facing partially glazed with 1 rectangular pane on top/ 1 inset wood panel on the bottom; doors covered with screening. PORCH: none; tile and stucco bracketed hoods over each door.

8. Construction date:

Estimated: post 1928-pre 1954

18. Related features: \_\_\_\_

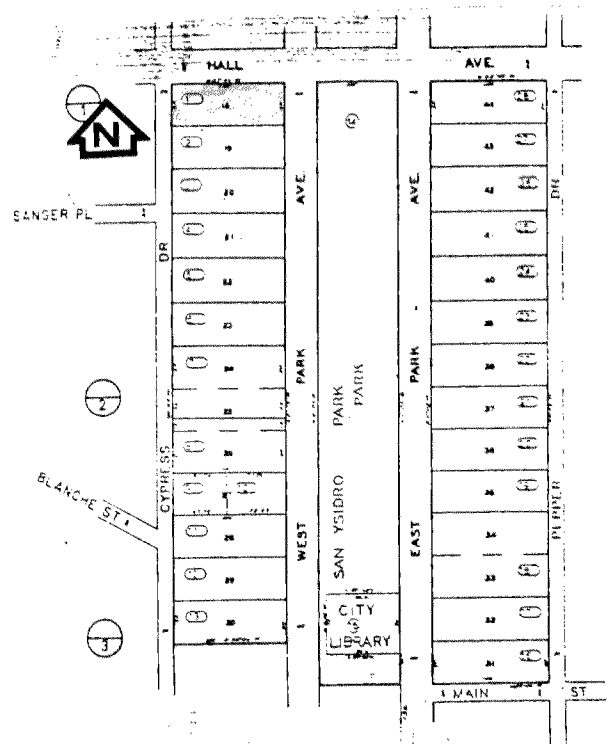

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original town lot 18 was purchased by White in 1913 (a White is listed in the 1909 City Directory as a "farmer"). A review of the 1928 aerial shows that this lot was empty when the photograph was taken. Interviews with Hettich (1989: p.c.) suggest that the building was constructed in the late 1920s-early 1930s as a doctor's clinic and apartment building. The building was never used by the doctor.

In terms of historic significance, most of the selected individual houses in the study area do not qualify for either federal, state or local historic designation. The potential historical significance lies in the fact that this building represents the 1st apartment building in San Ysidro (built after 1928) area)

### DESCRIPTION

7a. Architectural style: FOLK VERNACULAR WITH SIMPLE FOLK VICTORIAN PORCH ELEMENTS

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story house with combination roof lines that include low pitched front facing gable, off-set hip gable and a shed-like roof over wrap-around porch. Asymmetrical front facade.

STRUCTURAL AND DESIGN ELEMENTS : WALL TREATMENT: combination of irregular width lap siding, flush siding under gable, gold painted fake bricks (also serves as skirting above cement foundation) ROOF: composition shingles; exposed rafters along porch and under hip; plain fascia and gable board; horizontal boxed and silled louvered vent under gable. CHIMNEY: none. WINDOWS: main focal window is fixed with 30 panes; wood hood with jig-saw decorative board capped with Spanish tile; windows along porch are double hung with sash bar pattern of 2 lights in each window; side windows are covered with wood hood element. DOOR: partially glazed with one rectangular glass on top, 3 wood panels on bottom; attached screen door. PORCH: wrap-around porch; porch supports are combination 2 by 2 beams and wrought iron with triangular support braces at the top; simple jig saw design pattern along top of the porch railing and under porch roof; open strip vertical board railing; no stairs to front entry- four steps to side entry.

### DESCRIPTION

- 7a. Architectural style: SPANISH ECLECTIC: MULTIPLE ROOF PLANES
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:

This is at least the second house on the property. Heavy vegetation coupled with a massive wood fence and block wall around the perimeter makes house evaluation difficult to impossible. Elements visible over the fence include multi-roof lines (possible second story addition); stucco exterior (owner says house is adobe); decorative ceramic chimney with high pitch roof-like element at the cap. Some of the visible windows have extended wood lentils and sills; others are metal sliders. Redwood lattice work within the garden area. Back of the structure has western motif with multilevel roof line; red tile gable roof, wooden parapet and iron work along the fence facing the alley.

Owner didn't want her house viewed at this time.

8. Construction date:  
Estimated: 1920s
9. Architect: \_\_\_\_\_
10. Builder: \_\_\_\_\_
11. Approx. property size (in feet):

(MODIFIED DPR 523 Rev. 4/79)

13. Condition: Excellent \_\_\_\_ Good \_\_\_\_ Fair ☒ Deteriorated \_\_\_\_ No longer in existence \_\_\_\_
14. Alterations: main structure obscured with thick vegetation/security fences
15. Surroundings:(check appropriate boxes) Open land \_\_\_\_ Scattered buildings \_\_\_\_ Densely built-up \_\_\_\_  
Residential ☒ Industrial \_\_\_\_ Commercial \_\_\_\_ Other: \_\_\_\_
16. Threats to site: None known \_\_\_\_ Private Development ☒ Zoning ☒ Vandalism \_\_\_\_  
Public Works Project \_\_\_\_ Other: \_\_\_\_
17. Is the structure: On its original site?: ☒ Moved? \_\_\_\_ Unknown? \_\_\_\_
18. Related features: decorate gate/ western motif security fence facing the alley; lots of older vegetation

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

This is at least the second house built on the property; the original parcel (town lot 49, see attached Little Landers Map) was purchased by Margaret Story in 1911. The current house is a post Little Landers structure (Hettich 1989: p.c.). The first house was moved off the parcel by Mr. Cruthers (location or deposition of the original structure unknown). Although she did not move into the area until after World War II, Ms. Hettich is considered to be the "unofficial" historian for San Ysidro. Historic assessment of her house was not possible at the time of the study (Hettich's house has recently been broken in and "ransacked" for the 5th time, she was unwilling to let anyone see her house).

In terms of historic significance, most of the selected individual houses in the study area do not qualify for either federal, state or local historic designation. This structure is neither architecturally nor historically distinctive (see attached discussion dealing with historic significance of the study area)

## DESCRIPTION

7a. Architectural style: CRAFTSMAN

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story bungalow with hipped roof, totally enclosed porch and a front facing dormier. Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: combination stucco and lap siding with no corner boards. ROOF: shed extension roof in the back; composition shingles; undecorated fascia boards along main roof perimeter. DORMIER: faces the front with a slightly flared hip roof; double paned horizontal window in front; with surrounding plain board trim and lap siding; decorative braces under dormier roof. CHIMNEY: stucco side chimney. WINDOWS: main front window situated to the left of the entrance- double hung with Queen Anne detail in the upper panes/ single pane on the bottom; plain board trim around windows; lentils and sills extend slightly beyond window opening. DOOR: front facing (replacement door); above the door is an unglazed wood transem; the enclosed porch has a partially glazed door with 4 panes on top/ 3 wood panels on the bottom. PORCH: fully enclosed 1/2 porch under principal roof. The front facing side has 2 square 4 by 4 columns with simple molded capital and bases; the columns rest on a solid lap wall that extends from ground level to several feet above the porch ground level. The porch now has 3 front facing fixed windows with a sash bar pattern of 4 lights (inside windows of the porch may have been original exterior windows with Queen Anne sash bar pattern). There is 4 front facing cement stairs to stoop; stoop covered by a thin dropped shed roof that are exposed rafters and composition shingles. Wrought iron railing system along the stairs completes the exterior treatment of the porch.

17. Is the structure: On its original site?: ☒ Moved? \_\_\_\_ Unknown? \_\_\_\_
18. Related features: only 1 story Craftsman w/ dormier in area; cement block wall along perimeter; security bars on windows

## SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original town lot 50 (see attached Little Landers Map) was purchased by Margaret Story in 1909 and later bought by Cruthers in 1912. Story also owned parcels 49 (216 East Park) and 50 (218 E Park). This house appears in a 1912 historic photograph taken from the park and is therefore definitely associated with the Little Landers Colony #1. Margaret Story was no longer listed in the Directories after 1911. Apparently many of the original colonists were single, unattached women who bought undeveloped lots, stayed for an undetermined time and then moved out of the area. (They appear in the directories for one or two years. Some perhaps married which would account for the names no longer appearing in the directories).

Although nothing could be found regarding Margaret Story, this house is significant in that it is one of the oldest houses within the study area. It is a good example of the Craftsman bungalows built during the beginning of San Ysidro.

### DESCRIPTION

7a. Architectural style: CRAFTSMAN BUNGALOW

7b. Describe present physical description of site or structure; describe major alterations from original condition:

One story bungalow with medium pitch cross gable and low gable bay on one side. Asymmetrical front facade. STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: multiple siding with lap siding under gable, stucco on main walls, decorative rock skirt along foundation; side of the house has a combination of shingle and lap siding. ROOF: composition shingle; very wide overhangs; 3 decorative beams under gable; plaining board, exposed eaves; underside of the gable is an open rake giving a "laddered" effect. Side wall has 3 vent openings under gable; 3 off-set decorative beams extend several inches out from front wall at cornice line. CHIMNEY: interior brick chimney. WINDOWS: windows facing the street are fixed (two placed to the right of the door, 1 to the left of the door); sash bar pattern of 2 smaller lights on top/2 vertical lights on bottom. Windows inside porch (original main house windows) are double hung with sash bar pattern of 3 vertical lights on top/ 1 vertical light on bottom; plain board trim surrounds each windows. DOOR: can't see main door (inside porch); exterior door is plywood with single diamond shaped glass pane. PORCH: fully enclosed (incorporated into the house); has 2 thinly tapered square wooden pillars (now stucco) at either end of porch, they sit on top of solid decorative rock railing system; 2 cement steps to entry, bordered on either side by a low solid cement wall.

18. Related features: no older vegetation; wire fencing along perimeter;

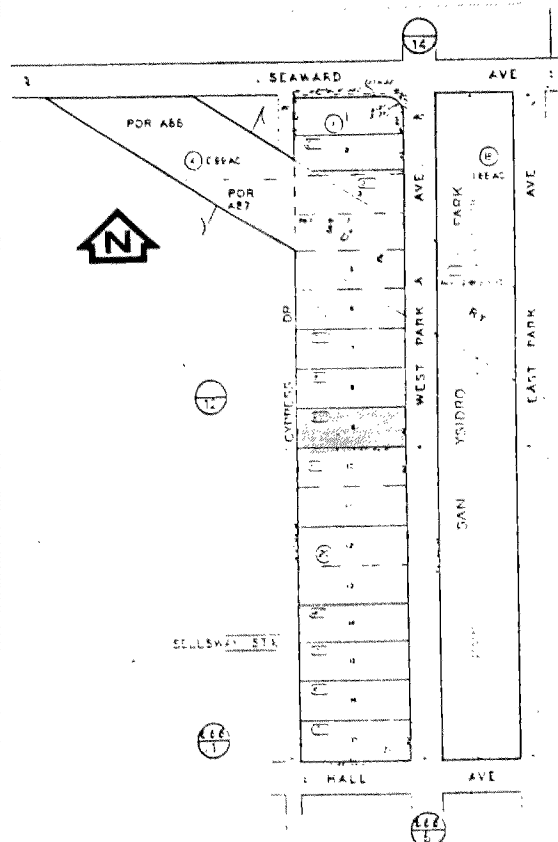

### SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, persons, etc.)

The original Town Lot 9 was purchased by George Hall in 1912. Hall at the age of 70 was one of the original officers for the Little Landers Colony and served as the 1st President of the 2nd Little Landers Corporation in 1912. As the horticultural commissioner for San Diego County, Hall advocated agricultural tracts of 10 acres or less as the best adaptation to county conditions. Based on the topographic considerations and soil conditions he suggested that the Little Landers Colony be established at San Ysidro. Hall and Smythe edited the one and only periodical for the settlement: Little Landers Library (1908). Hall bought the statue of General Grant in 1912 to "maintain good relationships with the city fathers of San Diego" (L. Judd September 30, 1955).

## HISTORIC RESOURCES INVENTORY

### 233 WEST PARK

#### 19. SIGNIFICANCE CONT.

Hall also owned Lots 2 and 3 in 1910; Parcels A86, 87, 88, 257 and 233 in 1913. Although he advocated agricultural tracts of 10 acres lots, he never bought an acre lot- all of his holdings were town sites (see attached Little Lander Map).

Although this particular parcel was originally owned by Hall, there is no evidence that this particular residence was occupied by him. Based on a review of the 1928 aerial, it is apparent that the house was built prior to 1928 and therefore could have been associated with the early Little Landers occupation. Further, the Craftsman bungalow style suggests an early date as well.

### DESCRIPTION

- 7a. Architectural style: FORK VERNACULAR WITH DIVERSE THEMATIC ELEMENTS
- 7b. Describe present physical description of site or structure; describe major alterations from original condition:  
One story house with medium pitch side gable and shed extension ("hall and parlor")  
Asymmetrical front facade; extremely deep set on property, set-off main street at least 50'.  
STRUCTURAL AND DESIGN ELEMENTS: WALL TREATMENT: scalloped shingle siding with more prominent relief under gable. ROOF: tile with thin pole as coping along gable; exposed eaves; slightly dropped roof over front, off-set porch, covered with composition sheeting. CHIMNEY: none. WINDOWS: 2 sets to the right of door- one grouping contains fixed pane with double hung on either side (single pane); other set contains double hung windows; metal awnings over windows; plain board surrounding trim.  
DOOR: metal screen. PORCH: open entry, off-set at front left; cross beam and supports gives "pagoda-like" feeling; exposed roof rafters, cross-beam extends beyond roof on either side; ends are carved to emphasize horizontal plane. Two 4 by 4 wood support columns; simple molded square capitals; additional side entrance has 3 cement steps with wrought iron railing system.  
Other details include lattice-like archway attached to the house; associated lattice work throughout yard; at least 2 associated out buildings.
